

Summary:

Python Developer with experience in developing web applications using **Django** and **Flask**, as well as building and automating scalable data pipelines. Proficient in integrating **RESTful APIs**, working with relational and **NoSQL** databases, and processing large datasets using **Pandas**, **SQL**, and **PySpark**. Experienced in implementing **machine learning** models using frameworks like **scikit-learn**, **TensorFlow**, and **PyTorch**, and leveraging **NLP** techniques with **spaCy** and **Transformers (Hugging Face)** for text-based solutions. Familiar with cloud platforms like **AWS (S3, SageMaker, Lambda)**, and tools like **Docker**, **Airflow**, and **Git** for efficient deployment and workflow automation. Skilled in data preprocessing, feature engineering, model evaluation, and **MLOps** practices, enabling seamless integration of AI-driven solutions into backend services. Adept at writing modular, testable code and collaborating in Agile environments to deliver robust, scalable, and data-driven applications.

Skills:

- **Programming & Frameworks:** Python, Django, Flask, FastAPI, SQL, PySpark, Shell Scripting
- **Data Processing:** Pandas, NumPy, PySpark, JSON, Parquet
- **Database Technologies:** PostgreSQL, MySQL, MongoDB, Snowflake, Redshift, SQLite
- **Big Data Tools:** Apache Spark, Hadoop, Kafka (basic understanding)
- **ETL & Workflow Orchestration:** Apache Airflow, AWS Glue, Talend
- **Cloud Platforms:** AWS (Lambda, S3, EC2, RDS, Glue), Azure (basic)
- **DevOps & Tools:** Docker, Git, Jenkins, GitHub Actions, CI/CD pipelines
- **Web & API Development:** Django, Flask, REST APIs, Django ORM, HTML, CSS
- **Others:** Linux/Unix, Agile, JIRA, Unit Testing (PyTest), Data Modeling, Version Control
- **Machine Learning & NLP:** Supervised & Unsupervised Learning, Model Evaluation, Feature Engineering, NLP Pipelines, Text Classification, Recommendation Systems

Education:

- Masters in Computer Science from Texas Tech University

Certifications:

- [AWS Certified Cloud Practitioner](#)
- [AI For Everyone](#)
- [Data Visualization with Tableau](#)

Professional Experience

Capital One | Python Developer (Data) | Dec 2024 - Current

- Automated internal operations by designing Django-based applications, resulting in a 50% reduction in manual workload.
- Developed RESTful APIs using Django REST Framework and Flask, improving communication between services and reducing latency by 30%.
- Built scalable ETL pipelines using Apache Airflow and Python to process structured and unstructured data from multiple sources.
- Handled large datasets (100M+ records) with Pandas and PySpark for analytics and business insights.
- Integrated AWS Lambda with S3 and Glue to create event-driven workflows, optimizing cloud resource utilization by 25%.
- Implemented machine learning models with scikit-learn and TensorFlow for predictive analytics, enhancing decision-making accuracy.
- Developed NLP solutions using spaCy and Hugging Face Transformers for text classification and entity extraction.
- Performed data preprocessing, feature engineering, and model evaluation to ensure efficient and scalable ML deployments.
- Authored unit and integration tests using PyTest, ensuring over 85% code coverage and high-quality deliverables.
- Designed optimized database queries in PostgreSQL, improving dashboard and reporting performance by 20%.
- Deployed CI/CD pipelines using GitHub Actions, automating testing, versioning, and deployment processes.
- Collaborated with cross-functional teams in Agile environments to integrate data-driven solutions and deliver robust applications.

Texas Tech University | Student Assistant II Technology Support | Nov 2023 - Dec 2024

- Engineered a Python-based threat detection tool using process heuristics and SMTP behavior analysis, enhancing endpoint security.
- Developed interactive Tableau and Excel dashboards by aggregating university system data to visualize performance KPIs.
- Deployed software patches and remediated vulnerabilities using Quest KACE, improving system compliance and reliability.
- Provided technical support to 200+ students per semester, resolving installation and connectivity issues with a 95% success rate.
- Performed system imaging and monthly device readiness tasks across 50+ endpoints on Windows and iOS platforms.
- Supported IT infrastructure through consistent ticket handling, reducing downtime incidents by 30% via proactive monitoring.

Morgan Stanley | Python Developer (Data) | Jul 2020 - Jun 2023

- Developed Django-based tools to visualize real-time market data, streamlining data access for internal stakeholders.
- Built automated ingestion workflows using Python to integrate APIs, CSVs, and databases, eliminating 90% of manual intervention.
- Scheduled and managed multi-source data pipelines with Apache Airflow, supporting hourly and nightly job execution.
- Implemented data validation layers and logging systems to ensure the integrity and traceability of ingested data streams.
- Leveraged GCP services, including Cloud Functions and Cloud Storage, to manage secure and scalable data operations.
- Created database schemas, indexes, and stored procedures in PostgreSQL and Redshift for optimized analytics workloads.
- Reduced SQL query latency by 30% through materialized views, indexing strategies, and partitioning techniques.
- Built and deployed machine learning pipelines using TensorFlow and scikit-learn, enabling predictive analytics for market trends.
- Maintained PyTest test coverage integrated with Jenkins pipelines for continuous quality assurance.
- Containerized Airflow and Django services using Docker to streamline development, testing, and deployment cycles.
- Built real-time compliance dashboards using Python and Plotly to track operational metrics and anomalies.
- Participated actively in Agile ceremonies and collaborated with stakeholders to refine technical and data-driven requirements.
