E-mail: jeevithavijaydr@gmail.com | P: 979 - 334 - 1366 | San Jose, CA | [linkedin.com/in/jeevitha-vijayakumar](https://www.linkedin.com/in/jeevitha-vijayakumar)

I am a **Data Analyst** with over **four** years of experience in **full-stack data analysis**, including data collection, cleaning, exploratory analysis, experimental design, statistical testing, reporting, and dashboard development. I excel at translating complex datasets into **clear insights** that support **product quality, operational efficiency**, and strategic decision-making through cross-functional collaboration. I am actively seeking new opportunities and hold **Employment Authorization (EAD)** to work in the United States.

Education

Bachelor of Engineering

Electronics and Communications Engineering, Graduation - June 2016
Visvesvaraya Technological University, Bangalore, India

Experience Summary

At Sensel, as a Data Analyst:

- Performed **data fetching, preprocessing, analysis**, and provided **reports** for both factory production systems and lab experiments.
- Developed **automated data pipelines** to process **production data** and generate **real-time KPI and yield** reports.
- Conducted **A/B testing** to evaluate **different product designs**, materials, and firmware performance to support **new product development**.

At Ocular, as a Python Developer:

- Developed **client-server applications** on **Linux** for efficient **storage and retrieval** of video recordings.
- Configured **AWS S3 buckets** and **IAM roles** for secure cloud storage and **access management**.
- Created **utility applications** to validate metadata, manipulate files, and monitor resource usage.

At Accenture, as an Application Development Analyst:

- Conducted **exploratory data analysis, visualization, and reporting** for Fortune 500 clients such as **Marriott International** and **Mount Sinai Health System**.
- Worked with **large-scale customer datasets** for Marriott, including customer **information, responses**, and marketing **campaign** data to analyze **performance trends** by segments like regions, demographics, etc.
- Worked with **large-scale healthcare data** to develop dashboards and automated reports to support data-driven decision-making.
- Gained exposure to **backend and data architecture** by optimizing database queries, structuring data pipelines, and designing reports to efficiently **handle large volumes of transactional and analytical data**.

Programming Languages, Technologies, and Frameworks

Data Analytics & Visualization: Python, Pandas, NumPy, Matplotlib/Seaborn, Hex, [Tableau Dashboards](#)

Databases & Data Warehousing: PostgreSQL, AWS Redshift, Base SAS, MySQL, Netezza, IBM Db2

Cloud & Data Services: AWS S3, AWS IAM

Data Management & Automation: SQL, Data Pipelines, [GitHub](#)

Professional Experience

Organization **Sensel, Inc., Sunnyvale, CA.**
Designation Data Analyst / Python Developer
Timeline February 2024 – June 2024

- Sensel develops the world's most advanced haptic touchpads. These touchpads and related technologies are often integrated in the latest laptops by **Lenovo, Dell, and Microsoft**.
- Analyzed largescale touchpad production data (force, haptics, linearity) to generate **KPI reports** that enabled production team to maintain **consistent quality and yield rates**.
- Developed **data pipelines** to automate yield reporting for production system data, **reducing manual work** and ensuring **real-time monitoring** of quality metrics.
- Performed **data fetching, organization, preprocessing, analysis**, and provided reports for both factory production systems and lab experiments.
- Conducted A/B testing to evaluate factors affecting touchpad performance and reliability, supporting product development and optimizing firmware, test cycles, and assembly processes.
- Optimized touchpad calibration and validation processes, resulting in a **30% reduction** in production time while ensuring **performance and accuracy**.
- **Collaborated** across **multiple engineering teams** to define data requirements and ensure analytics outputs aligned with **business and technical goals**.

Organization **Ocular Data Systems, Inc., Pasadena, CA.**
Designation Python Developer
Timeline October 2023 – January 2024

DAX Evidence Recorder

- DAX allows to manually test and record eye movements to document evidence of drug impairment. It has applications in detecting driving under the influence, ensuring workplace safety, and so on.
- **Created a GUI for recording** videos, validating metadata, and managing both local and cloud storage.
- Designed and implemented a **client-server communication system** for uploading and retrieving DAX video recordings from **AWS S3**.
- Created and configured **S3 buckets** and **IAM roles** to manage secure access and permissions for the system.
- Developed initial hardware specifications for deploying the system on **Raspberry Pi**, ensuring compatibility and efficient resource use.

Organization **Accenture, Bangalore, India**
Designation Application Development Analyst
Timeline Jul 2016 - Mar 2020 [3 years, 9 months]

Client: Marriott International - December 2018-March 2020

- Collaborated with stakeholders to **define marketing campaign objectives** and customer targeting criteria.
- Wrote **SQL queries** to pull large-scale customer datasets for campaign launches from enterprise databases.
- Developed **Python scripts** to analyze key campaign response metrics including **click rates, open rates, and conversion rates**.
- Performed **customer segmentation analysis** based on membership tier, **age group, and geographic** region to assess performance differences across audience segments.
- **Identified trends, patterns, and KPIs** from customer data to guide optimization of future campaigns.
- Built detailed visualizations and reports to evaluate the impact of **audience segmentation** and **category inclusion/exclusion** (e.g., specific offers or product categories) on campaign results.

Client: Mount Sinai Health System – December 2016-November 2018

- Developed and maintained complex **SQL queries** to retrieve and preprocess **largescale healthcare data** for analysis.
- Created **clinical reports** to track key **patient metrics** (lab results, vaccination rates, treatment outcomes).
- Designed **Tableau dashboards** for KPIs such as appointment trends, patient wait times, and cancellations, **improving scheduling efficiency by 15% in one department**.
- **Automated** recurring reports and dashboards to deliver timely insights to operational teams.
- **Partnered** with **healthcare stakeholders** to define reporting requirements and customize **Tableau visualizations** for different audiences.
