

Summary:

Java Full Stack Developer about 4 years of experience designing and delivering scalable, secure, and high-performance enterprise applications in banking and retail domains. Proficient in building REST APIs and microservices using Java, Spring Boot, Hibernate, and Spring Security, and developing responsive front-end solutions with ReactJS, JavaScript, HTML, and CSS. Skilled in event-driven systems with Kafka, containerization with Docker and Kubernetes and AWS (EC2, S3, RDS) with CI/CD automation using Jenkins. Experienced in TDD with JUnit, Mockito, and BDD with Cucumber, as well as monitoring and troubleshooting using Splunk, Grafana, and Prometheus. Strong expertise in implementing OAuth2.0, JWT, and optimizing SQL and MongoDB queries for performance, with a proven record of delivering high-quality solutions in Agile environments

Education:

Stevens Institute of Technology- NJ

Master of Science in Business Intelligence and analytics

Auro University – Surat, GJ, India

Bachelor of Science in Information Technology

Technical Skills:

- Programming Languages: Java (7, 8, 11, 17), JavaScript, TypeScript, PL/SQL, Python, HTML, CSS
- Software Methodologies: Agile, Scrum, SDLC, Waterfall
- Web Service Frameworks: Spring, Hibernate, JPA, Spring MVC, Spring IOC, Spring AOP, Spring DAO, Spring Batch, Spring JPA, Spring Web, Spring REST, OAuth2.0, Microservices
- Design Patterns: Singleton, Factory, Builder, MVC
- Web Technologies: JavaScript, HTML5, CSS3, React JS, Angular, Bootstrap
- Build Scripts: Maven, Jenkins, NPM
- Testing Tools: JUnit, Mockito, Selenium
- Version Control Tools: Git, GitHub, Bitbucket
- Database: Oracle, MySQL, MongoDB, Neo4J

Professional Experience

JP Morgan chase – Jersey City, New Jersey

June 2023- Current

Java Full Stack Developer

- Designed and implemented features for vault management workflows, including automated account onboarding, credential rotation, and expiration alerts.
- Developed and enhanced **Spring Boot** microservices for managing service accounts and vault integrations, ensuring compliance with enterprise security policies.
- Worked closely with UI teams to deliver a responsive **Single Page Application (SPA)** using **ReactJS, JavaScript, HTML, and CSS**.
- Leveraged **Java Stream API** for optimized data processing and transformation in microservices.
- Integrated with **Oracle DB** for metadata storage and reporting, optimizing queries for faster retrieval.
- Deployed containerized services to **OpenShift**, enabling high availability, scalability, and faster release cycles.
- Utilized **Splunk** for proactive monitoring, and troubleshooting production issues.
- Administered containerized deployments using **Kubernetes**, managing resources, autoscaling with **Horizontal Pod Autoscaler (HPA)**, and ensuring high availability.
- Followed **Test Driven Development (TDD)** practices by writing unit tests with **JUnit**, and mocking dependencies using **Mockito** for both unit and integration testing.
- Worked with **Oracle SQL** for transactional workflows and **MongoDB** for unstructured data, optimizing queries to improve performance and availability across systems.
- Developed enterprise features with **Spring Boot and Spring MVC** for microservices and utilized **Spring Batch and Spring Integration** to streamline batch processing and system integration.

Environment: Java 17/21, Spring Boot, REST API, Maven, CI/CD, Kafka, Jenkins, SLF4J, Splunk, OpenShift, JUnit, Mockito, Insomnia, IntelliJ, Jackson, Toad Data Point, Agile Methodology, React JS.

Scalelot Technologies–Surat, India

May 2021- Dec 2022

Java Developer

- Built **Spring Boot microservices** for transaction processing, integrated with Kafka for event-driven architecture.
- Optimized SQL queries and Hibernate mappings to reduce database latency by **30%**.
- Developed scalable and secure applications by applying advanced **Java** techniques (**multithreading, concurrency utilities, lambda expressions**) and core principles (**Collections, Generics, Exception Handling**) to implement robust business logic.
- Collaborated with UI teams to integrate **Angular-based frontends** with Java REST APIs.
- Implemented **exception handling, logging (Log4j2), and monitoring (Splunk)** for production stability.
- Participated in Agile ceremonies (daily stand-ups, sprint planning, retrospectives) and used JIRA for story tracking.
- Participated in **code reviews and version control** using Eclipse and Git, improving team collaboration and code quality.
- Implemented **RESTful web services** to expose business functionalities for integration with external systems and third-party retail applications.
- Designed **Cucumber test scenarios** covering positive, negative, and edge cases to validate critical banking transactions and user workflows.
- Engineered high-throughput **Kafka-based messaging systems**, improving inter-service communication reliability and system scalability.
- Leveraged **AWS services including S3, RDS, API Gateway, CloudWatch, and ECR** to manage storage, relational databases, secure API exposure, monitoring, and container image repositories, enabling scalable and resilient banking applications.
- Monitored application performance using **Splunk, Grafana, and Prometheus**, collaborating with support teams to resolve issues and ensure system stability.
- Introduced unit and integration testing with **JUnit 5 & Mockito**, improving defect detection rate.

Environment: Java (7, 8/11), J2EE, Spring Boot, Spring Data JPA, Spring JDBC, Spring Security, JWT, Jenkins, Kubernetes, JUnit, Mockito, Oracle SQL, MongoDB, OAuth2.0, Spring Cloud, RESTful Web Services, Hibernate, Kafka, Zookeeper, Redis, AWS, HTML/CSS, JavaScript, Angular11, Maven, Docker.
