Career Summary

I am a Software Developer with experience in building multi-tiered applications with GO, Javascript, Java, and Python. Created dynamic front-end applications with JavaScript, Typescript, React, and Material UI. Integrated server-side technologies such as Amazon Web Services(AWS) RDS/DocumentDB, and connections using GO , while running on an EC2 server.

Skills

- GO
- Python
- Flask/FastAPI
- Tensorflow
- Pandas, Matplotlib, Numpy
- PySpark
- Postgresql
- NoSql(MongoDB)
- Amazon Web Service
- Azure
- REST
- GraphQL
- DevOps
- Node.js
- JavaScript / TypeScript
- React
- HTML/CSS
- Sass
- Java
- Spring
- Git
- Agile-Scrum

Professional Experience

November 2020 - Present

Infosys - Associate Developer

Responsibilities:

- Developer that helped create multiple REST API that extract data from Azure Data Lakes, transform obtained data into new format using pyspark, loading data into the Cosmos DB, while removing old data.
- Developed an endpoint that provided a single document, or multiple documents from Cosmos DB based on user input.
- Used Locust to swarm millions of simultaneous users to test the stability of application infrastructure.
- Create unit tests and integration tests to ensure the code works as intended before application deployment.
- Worked with platform engineers to deploy applications with the use of Docker and Kubernetes.
- Developed alerts within the application to send notification to developers slack channel anytime there are issues within the application.
- Monitored and supported application from the development stage to production using tools like Datadog and New Relic.

Environment:

Python, Databricks, Azure, Flask, FastAPI, Datadog, Cosmos DB, New Relic, Kubernetes, Docker, APIM, Application Insights, PySpark

April 2020 - November 2020

Revature - Software Developer

Responsibilities:

- Head DevOps Engineer. Deployed UI and multiple MSA to the cloud using Amazon Web Service Code Pipeline, Elastic BeanStalk, Code Build, S3.
- Worked within an Agile workflow to complete project tasks.
- Leveraged Spring to create restful Java endpoints.
- Constructed Database using Spring and Hibernate. Then hosted the database on Amazon Web Service RDS.
- Constructed Database using Postgresql and hosted on Amazon Web Service RDS.

Environment:

Java, React, Microservices, Hibernate, Spring, Spring Cloud, TypeScript, JavaScript, HTML, CSS, Sass, PostgreSQL, SDLC, Agile-Scrum, REST, Linux Server, DevOps, Amazon Web Services, JUnit, TDD, Git, Jenkins

January 2019 - February 2020

Leonard Craft Co. - *Data Analyst*

Responsibilities:

- Analyze and report daily operations, such as: Order Imports, and shipments.
- Create an ETL dashboard that shows an analysis of weekly sales, customer service interactions, productivity, and weekly operations.
- Evaluate the efficiency of the production team to determine turnaround time for each product.
- Generate reports to determine production cost of each individual item, and profit margins based on current pricing.

Environment:

Python, Pandas, Tensorflow, JavaScript, HTML, CSS, PostgreSQL, NoSql(MongoDB),

Education

August 2019 - February 2020

University of California Irvine, Irvine - *Certificate in Data Analytics*

- **Relevant Coursework** - Python, SQL, HTML, VBA, R, NoSql, Pandas, Matplotlib, JavaScript

September 2016 - December 2018

California State University San Bernardino, San Bernardino - *Bachelor of Arts in Economics*

- **Relevant Coursework** - Quantitative Economic Analysis, Political Economics of Southern California, Regression Economic Analysis, Managerial Economics
