SUMMARY

Full-stack engineer with enterprise experience developing backend APIs, multi-step onboarding flows, and accessible UI for Morgan Stanley's High Net Worth Savings onboarding platform. Skilled across Java, Spring Boot, React, REST architecture, validation logic, debugging, API integration, and CI test stability. Able to work across controller, service, BO, mapper, and UI layers within Agile teams.

TECHNICAL SKILLS

Languages: Java, JavaScript, TypeScript, HTML, CSS

Frameworks: Spring Boot, React

Backend: REST APIs, Controllers, Services, BO Logic, DTOs, Mappers, YAML Config, JSON, Exception Handling, MDC Logging

Frontend: React Components, Multi-Step Forms, Validation, WCAG/ARIA Accessibility

Tools: IntelliJ, VS Code, Git, Git Bash, Gradle, Postman, JIRA, Confluence

Testing: Unit Tests, Integration Tests, CI Debugging

AI Tools: GitHub Copilot, Claude 4.5

Process: Agile/Scrum, PR Reviews, Deployment Prep

EXPERIENCE

Full-Stack Software Engineer (Contract) – Morgan Stanley

High Net Worth Savings • Account Opening Engineering (Feb 2024 – Nov 2025)

Backend Engineering:

- Built a customer pre-fill API including a new controller, service layer, BO logic, and DTO/mapping.
- Transformed downstream client data using unique identifiers for onboarding workflows.
- Implemented MDC logging, custom exceptions, correlation IDs, and correct HTTP status mapping.
- Debugged backend issues across controller, service, mapper, and orchestration layers.
- Maintained Gradle builds, resolved dependency issues, and supported CI test stability.
- Updated YAML configuration used for onboarding schemas.

Frontend Engineering:

- Integrated backend APIs into multi-step onboarding flows.
- Built UI components including account selection, FDIC disclosures, dropdowns, and input rules.
- Implemented required-field validation, gating logic, and error handling.
- Completed 70+ accessibility fixes improving ARIA labels, keyboard navigation, and screen reader behavior.
- Ensured all unit and integration tests passed, fixing mocks and debugging failures.

AI-Assisted Development:

- Used Copilot and Claude to accelerate development, refactor code, and debug logic.

Tooling & Collaboration:

- Used Postman for API verification and Git Bash for repo operations.
- Collaborated with QA, UX, backend, and product teams in Agile sprints.
