

Senior Java Developer

Jhansi | Jhansi.ram09@gmail.com | +1 (551)361-0679 | linkedin.com/in/vjhansi

SUMMARY :

- **Java Full Stack Developer** with **7+ years** of hands-on experience in designing, developing, and deploying enterprise-grade applications across **banking, healthcare, insurance, and IT consulting** domains.
- Proficient in building **RESTful APIs, microservices**, and full-stack web applications using **Java 8–17, Spring Boot, Spring MVC, Spring Security**, and **Spring Data JPA**.
- Designed and maintained **secure, scalable microservices** with end-to-end system integrations in highly regulated industries.
- Implemented **batch processing workflows** with **Spring Batch** to handle large data volumes for healthcare and insurance applications.
- Developed **data exchange and event-driven pipelines** using **Apache Camel**, enabling robust integration across distributed systems.
- Strong database experience with **Oracle, MySQL, PL/SQL, and SQL**, focusing on performance tuning and transactional integrity.
- Deployed cloud-native solutions on **AWS** (EC2, S3, RDS, ELB, Lambda) and **Azure App Services**, using **Terraform** and **CloudFormation** for IaC.
- Hands-on expertise in **containerization** with **Docker** and **orchestration** using **Kubernetes** for scalable, high-availability deployments.
- Developed responsive, component-driven front-end applications using **React.js** (Hooks, Context API), **AngularJS/4/13/17**, **TypeScript**, **Bootstrap**, **HTML5**, and **CSS3**.
- Monitored system performance and ensured observability using **Prometheus**, **Grafana**, **Log4j**, and custom dashboards.
- Implemented **CI/CD pipelines** with **Jenkins**, **GitHub Actions**, and **ArgoCD**, automating build, test, and deployment workflows.
- Developed unit, integration, and API tests using **JUnit**, **Mockito**, **Postman**, **Swagger**, and **Camel Test** for high code coverage.
- Secured applications using **Spring Security**, **OAuth2**, and **JWT** to support multi-user and role-based access control.
- Collaborative team player in **Agile/Scrum** environments, experienced with tools like **JIRA** and **Confluence** for sprint planning, tracking, and documentation.
- Migrated legacy monolithic applications to **modern microservices architectures**, driving scalability and maintainability.
- Led code reviews, enforced best practices, and **mentored junior developers**, fostering a culture of continuous improvement.
- Advocated for and practiced **TDD** (Test-Driven Development) and **BDD** (Behavior-Driven Development) for delivering maintainable code.
- Developed interactive UIs for high-traffic **customer-facing portals** in **banking, healthcare, and insurance** domains.
- Contributed to key enterprise projects with clients including **Bank of America, Elevance Health, AIG**, and **IBM**.
- Known for delivering **high-quality, secure, and compliant solutions** tailored to complex regulatory environments.

TECHNICAL SKILLS :

Programming Languages

Java (8–17), C, C++, C#, TypeScript, Python, SQL, .NET

Java Technologies

J2EE, JEE, Spring (Core, MVC, Boot, Security, Batch), Servlets, JSP, EJB, JDBC

Web Technologies & Frontend

HTML5, CSS3, JavaScript, TypeScript, React.js, AngularJS/4/13/17, jQuery

Web Services & APIs

RESTful APIs, SOAP Web Services, Postman, Swagger

Frameworks

Spring Boot, Spring MVC, Hibernate, JPA, JSF, ASP.NET, Vert.x

Messaging & Event Streaming

Apache Kafka, RabbitMQ

Cloud Platforms & Services

AWS (EC2, S3, RDS, SQS, SNS, CloudWatch), Azure (App Services, Functions)

Containerization & Orchestration	Docker, Kubernetes, OpenShift
Infrastructure as Code & CI/CD	Terraform, CloudFormation, Jenkins, GitHub Actions, ArgoCD
Development & Build Tools	IntelliJ IDEA, Eclipse, Visual Studio Code, Visual Studio, Maven, MyEclipse
Version Control & SCM	Git, GitHub, Bitbucket, SVN, CVS, VSS, IBM ClearCase
Databases	Oracle (11g/10g/9i/8i/7.x), MS SQL Server, MySQL, PostgreSQL, DB2
Testing & QA Tools	JUnit, Mockito, Spring Test, Selenium, Cucumber, Postman, Camel Test
Monitoring & Logging	Splunk, Prometheus, Grafana, Honeycomb, Log4j
Scripting & Automation	Shell Scripting, Python, Perl, JavaScript
Security	OAuth2, JWT, Spring Security, HTTPS, Role-Based Access Control (RBAC)
Development Methodologies	Agile (Scrum), Waterfall
Project/Issue Tracking	JIRA, Confluence

EDUCATION :

Master's :

Master of Science (M.S.) in Computer Science(C.S) from Campbellsville University, Kentucky, USA (2025).

Bachelor's :

Bachelor of Technology (B.Tech) in Electronics & Electrical Engineering (E.E.E) , Sai Spurthi Institute of Technology (SSIT), Hyderabad, India (2019).

PROFESSIONAL SUMMARY :

INFOSYS | Richardson, TX
Java Full Stack Developer

Jul 2024 to Present

Description : At Infosys, I serve as a Java Full Stack Developer supporting a leading retail banking client, where I design and implement scalable, secure, and high-performance web applications using a combination of modern front-end and back-end technologies.

Responsibilities :

- Developed **secure and scalable REST APIs** using **Java 17**, **Spring Boot**, and **Spring MVC** to power core retail banking functions.
- Architected and implemented **microservices-based solutions** supporting real-time account services, transaction workflows, and customer onboarding.
- Utilized **Spring Data JPA** and **Hibernate** for efficient, transactional database interactions in **Oracle** and **PostgreSQL** environments.
- Built cross-platform, responsive UI components using **Angular 17**, **React.js**, and **TypeScript**, enhancing user experience for features like **fund transfers** and **account dashboards**.
- Implemented **NgRx** for reactive state management and **RxJS** for efficient asynchronous data handling, reducing UI defects in dynamic banking modules.
- Integrated and consumed **REST/SOAP services** with **OAuth2** and **JWT** for secure communication, ensuring compliance with **banking data privacy standards**.
- Leveraged **Apache Kafka** for **event-driven architecture**, facilitating real-time activities such as **fraud alerts**, **payment notifications**, and **account updates**.
- Developed **Node.js microservices** to handle asynchronous operations and integrated them with Java services in a hybrid backend architecture.
- Containerized services using **Docker** and deployed them on **Kubernetes (EKS)** with **Helm charts**, ensuring **high availability**, **auto-scaling**, and **zero-downtime deployments**.
- Automated infrastructure provisioning using **AWS CloudFormation** for **EC2**, **RDS**, **S3**, and supporting banking systems on the cloud.
- Configured **AWS CloudWatch** for **log aggregation**, **error tracking**, and **system uptime monitoring** in production environments.

- Participated actively in **Agile/Scrum ceremonies** including sprint planning, backlog grooming, and daily stand-ups; collaborated with **cross-functional teams** including QA and product managers.
- Set up **CI/CD pipelines** with **Jenkins** and **GitHub Actions**, automating test, build, and deployment processes across development and production environments.
- Developed **dynamic data visualizations and dashboards** using **React.js** with charting libraries (e.g., Chart.js, D3.js) for internal reporting and analytics.
- Migrated legacy **monolithic systems** to modern **cloud-native microservices**, increasing release velocity and system modularity.

Environment : Java 8/11/17, TypeScript, Spring Boot, Spring MVC, Spring Data JPA, Hibernate, Node.js, AWS (EKS, EC2, RDS, CloudWatch), AWS CloudFormation, Kubernetes, Helm, Angular 17, React.js, RxJS, NgRx.

AMAZON | Chennai , India Senior Java Developer

Feb 2021 to Jun 2023

Description : As a Senior Java Developer at Amazon, I lead the design and implementation of robust, scalable, and HIPAA-compliant healthcare applications. My work spans backend microservices, integration pipelines, front-end modernization, and cloud-native deployments supporting mission-critical systems such as claims processing, eligibility verification, and member management.

Responsibilities :

- Designed and developed **secure, scalable RESTful APIs and microservices** using **Java 17, Spring Boot**, and **Spring MVC** for core healthcare systems including **eligibility, claims, and member management**.
- Implemented **Spring Batch** for scheduled processing of high-volume data feeds (e.g., claims adjudication, provider information updates).
- Utilized **Spring Data JPA** for complex data access patterns and persistence of member eligibility and benefits across **PostgreSQL** and **Oracle** databases.
- Engineered **integration pipelines** using **Apache Camel**, enabling seamless communication between **legacy systems, third-party vendors, and modern APIs**.
- Built and maintained dynamic front-end components using **AngularJS, Angular 13**, and **React.js** to enhance user experience for **member portals** and **provider dashboards**.
- Developed microservice gateways and backend orchestration layers with **Node.js** and **NestJS** to support service decoupling and scalability.
- Deployed HIPAA-compliant applications on **Azure App Services** and **AWS EC2**, ensuring high availability and industry-standard security.
- Developed **serverless functions** using **AWS Lambda** for real-time processing of healthcare triggers such as patient admissions and insurance updates.
- Used **Terraform** and **AWS CloudFormation** for infrastructure as code (IaC), enabling compliant, repeatable deployments across environments.
- Integrated **CI/CD pipelines** using **Jenkins** and **GitHub Actions**, automating testing, static code analysis, and deployment workflows.
- Created responsive, accessible front-ends using **HTML5, TypeScript**, and **Bootstrap**, conforming to healthcare usability and accessibility standards.
- Enforced **authentication and authorization** with **OAuth2, JWT**, and **SAML**, securing PHI access and meeting compliance with **HIPAA** and **HITECH**.
- Participated in architectural design aligning services with **HL7** and **FHIR** healthcare interoperability standards.
- Worked in **Agile/Scrum** teams, contributing to **sprint planning, story estimation, and regulatory-aligned releases**.
- Modernized legacy **Java EE monolithic systems** into **Spring Boot microservices**, significantly improving deployment agility and lowering operational costs.

Environment : Java 17, Spring Boot, Spring MVC, Spring Batch, Spring Data JPA, Apache Camel, Node.js, NestJS, AngularJS, Angular 13, React.js, TypeScript, HTML5 Azure App Services, AWS (EC2, S3, RDS, Lambda), Terraform.

Description : As a Java Developer at Infosys, I contribute to the development and modernization of insurance applications, including policy management and claims processing systems. My responsibilities span full-stack development, API design, database optimization, cloud deployment, and Agile collaboration to deliver scalable, regulatory-compliant solutions.

Responsibilities :

- Developed and maintained **secure and scalable RESTful APIs** using **Java 11**, **Spring Boot**, and **Spring MVC** for **insurance policy management** and **claims processing systems**.
- Utilized **Spring Data JPA** and **Hibernate** to interact with **MySQL** and **Oracle** databases, ensuring efficient persistence and transactional consistency.
- Created and optimized complex **PL/SQL stored procedures** for business operations such as policy lifecycle, underwriting, and customer account management.
- Built **modular and reusable UI components** using **ReactJS**, **React Hooks**, **Context API**, and **TypeScript**, enhancing customer and agent experiences.
- Applied modern **HTML5**, **CSS3**, and **Bootstrap** techniques to ensure responsive, cross-browser compatible user interfaces.
- Wrote robust **unit and integration tests** using **JUnit**, ensuring high code reliability and coverage for critical financial applications.
- Containerized services using **Docker** and deployed to **Kubernetes clusters**, managing multi-environment (dev/test/prod) deployments with high availability.
- Designed **infrastructure-as-code** with **Terraform** and deployed cloud-native services using **AWS EC2**, **S3**, and **Elastic Load Balancer (ELB)**.
- Integrated **CI/CD pipelines** with **Jenkins**, **GitHub Actions**, and **ArgoCD**, enabling streamlined build, test, and deploy workflows.
- Practiced **Agile Scrum methodology**, actively contributing to sprint planning, stand-ups, retrospectives, and backlog refinement.
- Participated in **peer code reviews**, applied **clean code principles**, and enforced **SOLID design patterns** for maintainability and performance.
- Maintained **legacy system integrations** via **SVN** while leveraging **Git/GitHub** for modern development workflows and collaboration.
- Worked closely with **QA teams**, **BAs**, and **stakeholders** to ensure delivery of compliant and quality solutions aligned with **insurance regulatory standards**.

Environment : Java 11, Spring Boot, Spring MVC, Spring Data JPA, Hibernate, PL/SQL, SQL, ReactJS, React Hooks, Context API, JavaScript, TypeScript, HTML5, CSS3, Bootstrap, AWS (EC2, S3, ELB) GitHub, SVN.

Description : At 4G Identity Solutions, I contribute to the design and development of secure, scalable web applications tailored for enterprise clients, including IBM. My role encompasses full-stack development using Java, Spring, and modern JavaScript frameworks, as well as cloud deployment, CI/CD, and legacy system support.

Responsibilities :

- **Designed and developed** scalable RESTful web services and backend APIs using **Java 8**, **Spring Boot**, and **Spring MVC** for enterprise-grade applications supporting IBM clients.
- **Built responsive and data-driven** web interfaces using **AngularJS**, **Angular 4**, **JavaScript**, and **jQuery**, enhancing usability for both administrative and client-facing portals.
- **Developed dynamic web modules** using **JSP**, **Servlets**, and **AJAX**, integrated seamlessly with Spring controllers to support legacy systems.

- **Implemented Spring Security** for robust **authentication and authorization**, ensuring secure API access based on role-based controls.
- **Managed data persistence** using **Hibernate ORM** with **MySQL** and **Oracle**, optimizing entity mappings and query performance.
- **Designed cross-browser-compatible and mobile-responsive UIs** using **HTML5, CSS3, and Bootstrap**, ensuring consistent user experience.
- **Packaged and deployed applications** on **Apache Tomcat** using **Maven**, managing environment-specific builds and WAR configurations.
- **Deployed applications to AWS EC2**, and stored build artifacts and logs in **AWS S3** for scalable and persistent storage.
- **Created AWS Lambda functions** for serverless, event-driven computing such as lightweight processing and automation tasks.
- **Implemented CI/CD pipelines** using **Git, GitHub**, and third-party automation tools, streamlining testing and deployment processes.
- **Configured Log4j** for centralized logging, error tracking, and application monitoring across distributed system environments.
- **Utilized Git and GitHub** for version control and branching strategies, enabling effective collaboration across globally distributed teams.
- **Developed reusable UI components and layouts** to accelerate front-end development of forms, dashboards, and modal interfaces.
- **Integrated frontend applications with backend APIs** via **AJAX** and **JSON**, enhancing interactivity and real-time communication.

Environment : Java 8, JavaScript, JSP, Servlets, Spring Boot, Spring MVC, Spring Security, Hibernate, AngularJS, Angular 4, jQuery, Bootstrap, AJAX, HTML5, CSS3, AngularJS, Angular 4, JavaScript, jQuery, Bootstrap.
