

JITHENDRA REDDY VEMPALLI

Data Engineer

Montgomery, AL • jithendrareddy.jithu1@gmail.com • (334) 840-0345 • [LinkedIn](#)

SUMMARY

- Experienced Data Engineer with around 4+ years of expertise in designing and optimizing ETL pipelines using Informatica, Apache Spark, and Kafka, ensuring efficient data processing and integration.
- Proficient in SQL, Snowflake, and MongoDB, managing structured and unstructured data for scalable and high-performance analytics solutions.
- Proficient in Azure Data Factory (ADF), Power BI, and Tableau, enabling real-time data visualization and business intelligence reporting.
- Knowledgeable in cloud technologies (AWS, Azure) and data-driven decision-making, collaborating with cross-functional teams to enhance data infrastructure, automation, and operational efficiency.

PROFESSIONAL EXPERIENCE

MCKESSON

Data Engineer

AL

Mar 2025 - Current

- Developed and managed end-to-end ETL/ELT pipelines using tools like Apache Spark, Azure Data Factory, and Informatica to integrate healthcare data from multiple sources, optimizing workflows for better processing speed and low-latency performance.
- Designed and maintained data models in data warehouses (Snowflake, Azure Synapse), and NoSQL databases (MongoDB) to efficiently store and retrieve healthcare-related data, ensuring scalability, accuracy, and compliance with healthcare regulations like HIPAA.
- Implemented real-time data ingestion and processing using Apache Kafka or AWS Kinesis, integrating streaming data into data lakes and warehouses for actionable insights, trend forecasting, and real-time analytics to improve patient care and decision-making.
- Developed and enforced data quality frameworks, incorporating automated validation checks and anomaly detection mechanisms to maintain high data integrity, ensuring accurate and consistent data for healthcare reporting and compliance.

INFOSYS LTD

Data Engineer / ETL Developer

Bangalore, India

Jul 2021 – Nov 2022

- Engineered ETL workflows using Informatica to integrate financial data from systems into a centralized data warehouse, strengthening data accessibility for Northwestern Mutual Funds.
- Collaborated with business analysts and data teams to refine data transformation logic, ensuring financial reports remained precise and aligned with evolving business needs.
- Optimized ETL performance, streamlining data ingestion pipelines and reducing processing time by 20%, accelerating report generation and analysis.
- Strengthened data integrity by implementing automated validation checks, reducing inconsistencies by 15%, and enhancing the accuracy of financial records.
- Transitioned legacy data infrastructure to a cloud-based environment with Informatica Cloud, improving scalability, compliance, and analytics capabilities.
- Administered daily ETL operations, monitoring job execution, diagnosing failures, and implementing optimizations to ensure uninterrupted data processing.
- Integrated ETL pipelines with visualization tools such as Tableau and Power BI, empowering leadership with real-time financial insights for strategic decision-making.
- Integrated ETL processes with Tableau and Power BI, enabling data visualization and improving reporting accuracy.
- Facilitated data quality checks, and identified inconsistencies, with senior developers to resolve discrepancies, ensuring data integrity.
- Monitored ETL workflows and job schedules, diagnosing failures and implementing corrective actions to maintain uninterrupted data flow.

AIRBNB

Data Engineer

India

Jun 2020 – Jul 2021

- Developed and optimized scalable ETL pipelines using Apache Spark, enhancing data processing efficiency by 30%.
- Designed and maintained data warehouses in Snowflake, ensuring structured storage and fast retrieval of high-volume datasets.
- Implemented Kafka-based real-time data streaming to process millions of customer interactions, improving analytics capabilities.
- Automated data ingestion and transformation workflows using Azure Data Factory (ADF), reducing manual intervention by 40%.
- Conducted performance tuning on SQL queries and NoSQL databases (MongoDB), optimizing query execution time by 25%.

AIRBNB

Jr. Data Engineer

India

Jun 2019 – May 2020

- Designed and maintained scalable data pipelines using Azure Data Factory to automate the ingestion, transformation, and integration of large datasets from diverse sources into Airbnb's centralized data lake.
- Engineered robust data infrastructure in Azure Databricks to efficiently process structured and unstructured data, supporting real-time analytics and machine learning workflows.
- Optimized and managed SQL-based data warehouses, ensuring high-performance data storage and retrieval to support internal teams with accurate and timely insights.
- Built and deployed data models and ETL workflows to support downstream analytics, including dashboards in Tableau and Salesforce for user engagement and performance tracking.
- Collaborated cross-functionally with engineering, product, and data science teams to define data requirements and ensure the delivery of clean, reliable, and well-documented datasets.
- Implemented data quality checks and monitoring systems to ensure integrity, consistency, and availability of critical data assets across platforms.
- Supported personalization initiatives by building data pipelines that enabled the enhancement of Airbnb's search algorithms and recommendation engines.
- Developed systems to collect and structure marketing campaign data from SEO, PPC, and social media platforms, enabling granular performance tracking and analytics at scale.

EDUCATION

AUBURN UNIVERSITY AT MONTGOMERY

Masters in Computer Science

Alabama

Jan 2023 – Dec 2024

VIT UNIVERSITY

Bachelor of Technology in Electronics and Communication Engineering

Chennai, India

Jun 2016 – May 2020

SKILLS

- **ETL & Data Engineering:** Informatica, Apache Spark, Kafka, Azure Data Factory (ADF)
- **Database Management:** SQL, Snowflake, MongoDB, NoSQL
- **Data Analytics & Visualization:** Power BI, Tableau, Salesforce
- **Cloud Technologies:** AWS, Azure
- **Programming & Scripting:** Python, SQL
- **Marketing Analytics:** SEO, PPC, Social Media Analytics
- **Project Management & Communication:** Mentoring, Stakeholder Collaboration, Performance Optimization

CERTIFICATIONS

- Python for Data Science – Coursera
- Microsoft Azure Data fundamentals (DP-900)
- Applied databases- Joins, DB programming, Data warehouse designs, Query optimization.
- Illustrative visualization – Visualization basics, Python libraries, Matplotlib, Multivariate Data Visualization, Interaction Techniques.

PROJECTS

- **Web Cloud:** Web-Based Cloud Storage for Secure Data Sharing across Platforms.
- Developed Web Cloud: browser-side encryption solution.
- Solve issues of prior systems: Inconvenient data sharing, Low security with low-entropy PIN encryption, and Poor usability with specialized software/plugins.
- Analyzed cutting-edge Web technologies. Integrated reports to generate detailed usage reports for administrators, enhancing visibility into data-sharing activities.
- Featured quick data processing with offline encryption. Implements outsourced decryption. Ensure enhanced privacy and security for user data in the cloud.
