Skills

Java, Python, Javascript, React JS, Flask, Django, Agile, Git, Linux Command Line, Unit Testing, Microservice, Docker, Kubernetes, SQL, Mongo DB, HTML, CSS, NodeJS, Openshift

Project&Certification

Store Management System | Full Stack Web Application | React, Node.js (Express), MongoDB

Role-Based Authentication & Security

- Built role-based authentication using bcrypt for secure password hashing and JWT for session management; implemented middleware to protect admin-only routes, ensuring only authorized access.

Admin Dashboard Implementation

- Developed CRUD operations for employees, including hourly rates and active status tracking; designed shift assignment UI (AM/PM) linked to employee data; implemented tip entry per shift with automatic allocation based on individual tip share; created financial tracking and reporting features to summarize employee earnings, daily revenue, and shift-level performance, supporting payroll and tax reporting.

User Dashboard & Operational Utilities

- Implemented features for regular users, including recipe viewing, inventory updates with “buy” flags for purchase management, clock-in/out with last-4-digit phone verification, cash counts broken down by bill denominations, refund submissions, and unavailable date management to prevent scheduling conflicts. Improved workflow efficiency and reduced administrative errors.

Data Modeling & API Development

- Designed MongoDB data models for employees, schedules, tips, recipes, inventory, and cash counts; built RESTful APIs to support CRUD operations, nested population of employee references, and aggregation pipelines for reporting; optimized queries to enable real-time operational dashboards.

IBM Back-end Development Professional Certificate

Django Application Development with SQL and Databases

- Built a full-stack application by developing a new course object with exam-related models using the admin site, updating the course details template to display questions and choices, and designed a new exam result template to show the results of the submission. Implemented a new exam result submission view and a view to display and evaluate the exam results by using database fundamentals, SQL, and Object-Relational Mapping (ORM) with Python, and used Django to create question, choice, and submission models.

Introduction to Containers w/ Docker, Kubernetes & OpenShift

- Built and deployed a simple guestbook application with a web front end, where users can enter text and submit it by using Flask. Created Kubernetes deployments pods, applied horizontal pod scaling to the Guestbook application, and worked on rolling updates and rollbacks to ensure smooth application management.

Application Development using Microservices and Serverless

- Learned microservices architecture and serverless computing, including building REST APIs with Python and Flask. Deployed and integrated multiple microservices, including product details (Python) and dealer pricing (Node.js), using serverless architecture (IBM Cloud Code Engine). Configured API endpoints for each service and deployed a front-end dealer evaluation microservice to enable users to search products, view dealer information, and compare prices.

Back-end Application Development Capstone Project

- Developed a full-stack web application for a band, which included four key components: a get pictures microservice, built with a Python Flask-based REST API to store URLs of pictures from past events; a song lyrics microservice, using MongoDB and PyMongo to store and retrieve lyrics of popular songs efficiently; a Django website, which integrated the songs and pictures microservices. Set up the GitHub repository and created a Dockerfile to containerize the Django application, deployed it using Kubernetes, and managed deployments on IBM Kubernetes Service (IKS) using kubectl and deployment YAML files.

Work Experience

United States Air Force

Airman First Class | Dental Assistant | May 2024 – Present

Developed discipline, teamwork, and adaptability in high-pressure environments; provided patient care in a fast-paced military clinic.

Owner & Manager

Teddy's House Café | July 2023 – December 2024

Managed daily operations and staff training; drove customer engagement through social media marketing and improved brand visibility.

Purchasing Manager

Beautiful Day Trading | March 2021 – July 2023

Oversaw import schedules and product launches; led brand development and marketing initiatives, achieving 20% revenue growth.

EDUCATION

Georgia State University

Bachelor of Science: Computer Science

Atlanta, GA

DEC 2021
