Summary

Senior Software Engineer with 8+ years of experience architecting and building scalable, high-performance web applications. Specializing in front end development with TypeScript and Angular, with a proven ability to mentor engineering teams, drive architectural strategy, and translate complex business requirements into high quality technical solutions in fast paced Agile environments.

Skills

Programming Languages: TypeScript, JavaScript, C#, SQL, Python, PHP

Back-End Development: Node.js, .NET, Express.js, RESTful APIs, MySQL, MongoDB

Front-End Development: Angular, React, HTML5, CSS3, SCSS, BEM, Webpack

Testing & Debugging: Jasmine, Karma, Unit Testing, Browser Development Tools, Incident Debugging

Development Tools & Platforms: Git, Azure, Jira, NPM, Visual Studio, VS Code, Figma

Dev Practices: Agile, Code Review, Stakeholder Communication, Technical Documentation, Team Leadership

Experience

Senior Software Engineer | Status Quote | Orlando, FL | April 2017 - Present

- Drove frontend architectural strategy, identifying and refactoring redundant code across multiple projects into centralized, reusable libraries to improve maintainability and developer velocity.
- Spearheaded a critical UI restructure for a medical appeals application, delivering a cleaner, more intuitive workflow that was recognized by operations management for significantly reducing user task completion times.
- Engineered a high performance, browser-based CAD editor using Angular and TypeScript, migrating complex business logic from .NET and developing new, web specific RESTful APIs to support frontend functionality.
- Initiated and cooperatively developed a new support ticket system after identifying inefficiencies in the existing process, which streamlined communication and provided developers with automated contextual data, leading to faster bug resolution.
- Played a pivotal role in developing features for a critical medical appeals application, from technical design and API integration to resolving a production deployment issue under pressure, ensuring minimal downtime.
- Jointly engineered the full automation of a legacy document request feature, creating a new workflow that eliminated monotonous manual tasks and freed up the operations team to focus on more valuable initiatives.
- Mentored junior and intermediate level engineers through pair programming and structured code reviews, elevating team skills and enabling the delegation of more complex tasks to increase overall team velocity.
- Championed code quality and reliability by writing comprehensive unit tests with Jasmine and Karma, driving code coverage to 100% on key features and incorporating tests for complex edge cases.
- Developed and maintained secure RESTful APIs with authentication, like JWT, for secure data exchange between systems.
- Authored detailed technical documentation for system architecture, APIs, and development best practices to improve team efficiency and knowledge sharing.

Projects

Roommate Matching App

- Developed a mobile app featuring a preference based matching algorithm and WebSocket based real time chat.

Recipe Finder Web App

- Built a React app that uses a third-party API to find recipes by ingredients, featuring dynamic search and filtering.

Education

University of Central Florida | Orlando, FL

Bachelor of Science in Computer Science
