

Joseph Keepers

Bloomfield, NJ | 848-219-2081 | josephkeepers@gmail.com | [linkedin.com/in/josephkeepers/](https://www.linkedin.com/in/josephkeepers/) | hsqhealthcare.com

EDUCATION

Stevens Institute of Technology, Hoboken NJ

Master of Science in Computer Science

Expected 12/2025

Machine Learning Graduate Certificate

Expected 12/2025

GPA: 3.72 | Relevant Coursework: Data Structures, Algorithms, Web Programming, Database Management Systems I & II, Machine Learning Fundamentals and Applications, Deep Learning, Artificial Intelligence, Natural Language Processing

SKILLS

Programming Languages: Java, Python, SQL, LaTeX | **Libraries / Frameworks:** Keras, Tensorflow, Numpy, Pandas, Sklearn | **Web Technologies:** Javascript, HTML, CSS, Bootstrap | **Database Systems:** PostgreSQL, MongoDB | **Tools / Platforms:** Git, VS Code, Anaconda, NodeJS, Netlify, Microsoft Excel, Bloomberg Terminal

RELATED EXPERIENCE

Hamilton Square Healthcare Partners LP, Princeton, NJ

Software Engineer Intern

05/2025- present

- Developed an original trading strategy by creating a Python program with Bloomberg Terminal data that finds patterns between thousands of relative dividend yields, ytd changes and stock prices; implementation projected to increase returns for the fund's portfolio by >\$1M
- Built and deployed the fund's website with Bootstrap, HTML, CSS, JavaScript, Netlify, and GitHub; partnered with external counsel to ensure SEC compliance and contributed to drafting the privacy policy and terms of service
- Leveraged multiple regression machine learning models, Python, Bloomberg Terminal data, and Excel to analyze company news data and predict target outcomes with >98% accuracy
- Tested the hypothesis that a weighted forced ranking system would improve performance over an unweighted system using linear regression models in Python, Bloomberg Terminal data, and Excel
- Automated the fund's forced ranking system by designing the sorting algorithm and implementing it using Excel formulas

Stevens Institute of Technology, Hoboken, NJ

Course Assistant, Fundamentals of Computing | Database Management Systems I

01/2025- 05/2025

- Assisted students with Python programming, Algorithm analysis, and Database concepts; debugged code to ensure correct logic, and graded assignments/exams involving Python, SQL, and Relational algebra

ACADEMIC PROJECTS

Stevens Institute of Technology, Hoboken, NJ

Machine Learning

01/2025- 05/2025

- Led a team of students to develop a Python-based bankruptcy prediction model using feature engineering and stacking ensembles; reduced features to 10 per cluster, handled class imbalance, and achieved 85–100% meta-model accuracy across six subgroups for 1,012 test companies

Deep Learning

01/2025- 05/2025

- Built and trained a supervised autoencoder on MNIST to learn low-dimensional, discriminative features; applied Python and Keras; achieved >90% validation accuracy after hyperparameter tuning
