Summary

- Computer Science graduate currently pursuing a Master's degree in Cybersecurity at MSU Denver.
- Experienced in hardware, software, networking, and troubleshooting across diverse environments.
- Familiar with AI, cybersecurity, and applying creative thinking to technical problems.
- Comfortable leading projects and working with others to problem solve and achieve goals.
- Recognized for leadership, engagement, and collaboration through a CU Denver engineering award.
- Experienced in translating technical issues to non-technical users while maintaining professionalism.

Technical Skills

- C, C++, Python, Conda, Jupyter, PuTTY, MySQL
- Microsoft Office, Google Suite, Adobe, AI Models
- Windows & MacOS systems
- Network protection and configuration
- PC building and hardware/software troubleshooting (custom builds, component diagnostics, system optimization, disk management/imaging)

Education

Metropolitan State University, Denver:

Master's Degree in Cybersecurity

Dec 2026

University of Colorado, Denver:

Bachelor's Degree in Computer Science

May 2025

Minors: Anthropology & Ethnic Studies

Front Range Community College:

Associate's Degree in Economics

May 2023

Certifications

NVIDIA Certificates of Competency

Applications of AI for Anomaly Detection

June 2025

- Demonstrated competence in applying AI techniques to detect anomalies in real-world data.
- Troubleshoot underperforming models by adjusting parameters, functions, and regularization techniques.
- Diagnosed low validation scores by refining data preprocessing, splits, and feature scaling.

Rapid Application Development with Large Language Models

August 2025

- Explored model deployment, multimodal input handling, and integration of generative AI into real applications.

Related Projects

Accessibility Mobile Application

August-December 2021

- Led a team to create a mobile app focused on improving accessibility for users with physical limitations.
- Consistently strived for improvement based on feedback from both peers and users.
- The project received CU Denver's "Best Stakeholder Engagement" award due to such thorough communication.

Secured all Devices Connected to a Network

August 2024-Present

- Configured Diversion and Skynet on Asus-Merlin firmware to block ads, trackers, and port scanners.
- Explored IP address configuration (DHCP and static), VLAN setup, and home router-level network segmentation.
- Actively monitored DNS queries and drive health to prevent failures and preserve data integrity through imaging.

Related Professional Experience

Contract Mover / IT Device & Network Processing

Buehler Companies, Aurora, CO

June 2019-Present

- Processed, logged, formatted, preserved, and repaired various electronic and networking devices for clients.
- Worked with and learned from trained specialists to assemble and disassemble server room equipment.
- Gained experience with networking setups, diagnostics, troubleshooting, and infrastructure basics.

Self-Employed E-Commerce Sales

July 2021-Present

- Managed product sourcing, listing, packaging, and shipping across various e-commerce platforms.
- Maintained over 500 positive customer reviews due to consistent service and clear communication with buyers.
- Developed skills in logistics, self-management, and customer relations to ensure every order met expectations.
