EDUCATION

University of Cincinnati

August 2024 - December 2025

Master's, Computer Science

GPA: 4

- Big Data Analytics, Cloud Computing, Data Science, Advanced Algorithms, Requirement Analysis, Database Management

PROFESSIONAL EXPERIENCE

Corefront Technologies Pvt Ltd

Bangalore, KA, India

Data Analyst

May 2023 - May 2024

- Developed dashboards in Power BI highlighting KPI's (revenue, expenses, inventory level, and sales) from various data sources (Enterprise database, Site database, and Forms) using SQL driving critical decisions and process improvements.
- Utilized advanced simulation models and Python for a strategic initiative that improved production by 50%, showcasing strong analytical and problem-solving skills.
- Applied data modeling techniques to design scalable data marts, improving query performance and enabling business stakeholders to access real-time insights on KPIs.
- Created dashboards to analyze incidents, team performance, and resource status, reducing resource costs by 15%, cutting incident resolution time by 20%, and enhancing operational efficiency by 25%.

PROJECTS

Electric Vehicle Analysis Dashboard with Tableau

- Analyzed EV sales data and developed a dashboard that revealed high-growth regions, which can help stakeholders focus marketing efforts and increase outreach by 25%
- Created dynamic filters and parameters for user-friendly exploration of data.
- Presented insights to stakeholders, saving time and improving strategies to boost EV sales.

ASL Spelling Detection

- Led a team of 4 to develop an ASL spelling detection system, translating gestures of 28 labels into English with 98.4% accuracy.
- Built a gesture recognition pipeline using PyTorch, TensorFlow, OpenCV, and CNNs.
- Delivered a real-time translation application, improving accessibility for non-ASL speakers.

Sentiment Analysis Application

- Created a sentiment analysis application using Python and Natural Language Processing.
- Employed machine learning models to classify sentiment accurately in text sources.
- Provided valuable insights to optimize communication strategies and decision-making.

Customer Churn Prediction

- Utilized machine learning models in R to generate actionable insights, improving customer retention strategies, optimizing decision-making and increasing retention rates by 15%.
- Achieved an accuracy of 99.3% by evaluating model performance with key metrics.
- Delivered predictions that led to a 15% improvement in customer retention and a 10% increase in revenue.

SKILLS

Cloud Platforms: Microsoft Azure, AWS, Google Cloud Platform

BI & Visualization: Power BI, Tableau, Looker, Excel/Numbers/Sheets

Programming: Python, R, Java, Pandas, NumPy, SQL, Pyspark

Databases: MySQL, Snowflake, Apache Spark, Airflow, Data Warehousing (ETL Design, Data lakes, Marts)

Certifications: Google Data Analytics Specialization

LEADERSHIP

- Led a team of 12 Officers, Conducted Technical events and handled 5000+ Participants as part of ACM Student chapter in college.
- Volunteered as coding instructor for 15 students and taught python and java as part of Make A Difference NGO
