SUMMARY

Data Analyst with 7+ years of experience leading data-driven initiatives across healthcare and cloud environments, with expertise in regulatory compliance, cross-functional program execution, and scalable analytics solutions. Experienced in working with **EHR systems (Epic, Cerner)**, **HIPAA-compliant** data practices. Proven ability to support clinical decision-making, optimize patient outcomes, and streamline operational workflows through data-driven strategies. Collaborative team player with a strong understanding of population health, quality metrics (**HEDIS, CMS**), and predictive analytics.

SKILLS

Languages/Databases: MySQL, Microsoft SQL Server, MS Access, Python, R

Tools & Platforms: SQL, Python, SAS, Tableau, Power BI, Excel, R (basic), Epic, Cerner,

Skills: AWS, Azure Data Factory and Data Bricks

Cloud Technologies: Microsoft Azure, AWS, GCP

Analysis Tools: Tableau Desktop, Microsoft Azure, Power BI Desktop, SAS, MS Excel, MS Word, MS Outlook, MS Visio, MS PowerPoint, and MS SharePoint

Healthcare Analytics: Claims Analysis, Population Health, EMR/EHR Data, Patient Outcomes

Other Technical Skills: Machine Learning, Data Management, Data Security, Data Integration, Data Technology, ETL/ELT Process Innovation & Management, Snowflake, Big Data Technology

EXPERIENCES

SEAGEN | Senior Data Analyst | USA | June 2024 - Present

- Design and execute advanced statistical models and exploratory analyses using **Python**, **SAS**, and **R (basic)** to support clinical operations, adverse event monitoring, pharmacovigilance, and real-world evidence (RWE) initiatives.
- Lead and manage clinical data operations across multiple global oncology trials, integrating and harmonizing large-scale datasets from EMR/EHR systems such as **Epic** and **Cerner**, with a strong focus on **claims analysis**, **population health**, and **patient outcomes research**.
- Manage and analyze high-volume, high-velocity data using **Snowflake** and **Big Data technologies**, improving performance of downstream analytics and enabling real-time visibility into patient safety and operational KPIs.
- Perform end-to-end data extraction, cleansing, transformation, and validation using **MySQL**, **Microsoft SQL Server**, and **MS Access**, ensuring high accuracy, completeness, and regulatory compliance of complex clinical and real-world data.

- Create and maintain dynamic dashboards and clinical trial visualizations using **Tableau Desktop**, **Power BI Desktop**, and **Excel**, supporting executive decision-making, patient enrollment monitoring, and site performance evaluation.
- Partner with data engineering, clinical operations, regulatory, and IT teams to develop and deploy scalable, cloud-native data solutions on **Microsoft Azure** ensuring robust data governance, privacy, and system interoperability.
- Represented data engineering initiatives in cross-departmental steering committees, establishing performance metrics and status reporting protocols for data remediation and governance programs.
- Led change management for enterprise data quality initiatives, facilitating onboarding, documentation, and adoption across clinical operations, regulatory, and **IT units**.
- Automate ETL/ELT processes and standardize data workflows to increase operational efficiency by 40%, supporting seamless data transfer and lineage tracking while ensuring alignment with **FDA**, **HIPAA** and **21 CFR Part 11** compliance standards.
- Provide comprehensive documentation and communication of data pipelines, analytic findings, and business insights using tools like **MS Word**, **Outlook**, **PowerPoint** and **SharePoint** for internal reviews, protocol amendments, and regulatory submissions.
- Developed and presented program dashboards using **Excel** and **PowerPoint** for executive stakeholders, tracking progress of regulatory-aligned remediation programs and surfacing risks.
- Contribute to Seagen's **precision medicine** and **clinical trial optimization** initiatives by developing and applying **machine learning** models for patient stratification, risk prediction, and trial outcome forecasting.
- Collaborate with IT, Clinical Operations, Biostatistics, and Regulatory Affairs to deploy scalable data solutions on **Azure** ensuring compliance with **FDA**, **HIPAA**, and **GxP** requirements.
- Actively participate in cross-departmental innovation projects, evaluating new data technologies and contributing to digital transformation efforts in oncology research and development.

La Healthcare | Clinical Data Analyst | USA | July 2022 – May 2024

- Served as a key Data Analyst at **LA Healthcare** supporting clinical, operational, and public health analytics across diverse service lines
- Extracted and analyzed data from EMR/EHR platforms including **Epic** and **Cerner**, focusing on improving patient outcomes, reducing hospital readmission rates, and optimizing care delivery.
- Utilized **MySQL**, **Microsoft SQL Server**, and **MS Access** to manage large datasets from multiple departments, including patient demographics, billing, pharmacy, and lab results
- Developed custom SQL scripts and stored procedures to automate reporting processes and reduce manual data handling errors by 60%.
- Conducted in-depth statistical and trend analysis using **Python**, **SAS**, and **R (basic)** to support quality improvement projects, risk stratification, and chronic disease monitoring.
- Created interactive and visually compelling dashboards using **Tableau**, **Power BI**, and **Excel**, enabling leadership to track key performance indicators such as vaccination rates, ED utilization, and preventive care metrics.
- Collaborated with cross-functional teams including clinical operations, finance, and IT to design data-driven strategies that enhanced care coordination and operational efficiency.
- Functioned as point-of-contact for strategic analytics programs, **allocating tasks**, setting delivery timelines, and coordinating execution across diverse stakeholder groups.
- Supported **Medicaid and Medicare** data reporting and analytics for state audits and compliance with **HIPAA**,

HITECH, and **CMS** regulations.

- Led initiatives in **claims analytics** to detect coding anomalies, identify overutilization, and reduce costs for LA Healthcare's managed care populations.
- Authored technical documentation, data dictionaries, and SOPs using **MS Word**, **Visio**, and **SharePoint** to support data governance and knowledge transfer.
- Participated in regular data quality reviews, root cause analyses, and audit readiness exercises to ensure data integrity across all platforms.
- Led governance documentation efforts aligned with change controls, enabling **smoother regulatory** transitions and system updates during enterprise data modernization. Integrated and analyzed data from **Health Information Exchanges (HIEs)** and state registries, supporting chronic disease registries and COVID-19 tracking across the region.
- Designed and deployed **self-service reporting portals** using Power BI Embedded and Azure Synapse Analytics, reducing turnaround time for stakeholder requests by 70
- Conducted **cost-benefit analyses** for proposed healthcare interventions, enabling data-backed decisions for program expansion or redesign in high-utilization populations.
- Implemented **data lineage and metadata tracking systems**, enabling consistent governance and improving transparency in enterprise data assets.
- Built a library of reusable analytics assets and templates, standardizing reporting formats and boosting cross-departmental data literacy.
- Continuously upskilled in new tools, technologies, and healthcare trends, contributing to LA Healthcare's data modernization and digital transformation efforts.

Sigma Info Solutions | Clinical Data Analyst | Pune, India | Jan 2021 - May 2022

- Analyzed clinical trial data to identify trends and insights, facilitating vaccine and biopharmaceutical development. **Managed large datasets** from **clinical trials**, ensuring data accuracy and regulatory compliance.
- Integrated diverse data sources into a unified system to streamline data processing and analysis for vaccine research. Developed and maintained detailed reports and dashboards using **SQL** and **Tableau**, providing real-time insights to researchers.
- Conducted advanced statistical analysis using **Python** and **R** to support clinical research and validate study results.
- Developed predictive models to forecast clinical outcomes and optimize trial designs, improving research efficiency.
- Ensured data management practices adhered to regulatory requirements, including **GCP standards**. Implemented data governance frameworks to maintain high standards of data integrity and confidentiality.
- Automated data extraction, transformation, and loading (**ETL**) processes, reducing manual errors and processing time by **30%**. Streamlined data collection and analysis workflows, enhancing the efficiency of clinical trial operations.
- Collaborated with cross-functional teams to **align data analysis efforts with research goals**.
- Engaged with key stakeholders to provide data-driven recommendations, improving decision-making and project outcomes.
- Created interactive visualizations to communicate complex data insights to non-technical stakeholders.
- Presented analytical findings to senior management and research teams, contributing to strategic planning.
- Utilized **SQL**, **Python**, **R**, **Tableau**, and **ETL tools** to deliver **high-quality** data solutions for **biomedical research**.

Omega Healthcare | Clinical Data Analyst | Bangalore, India | Jan 2018 - Dec 2020

- Performed backend testing by executing **SQL Queries**.

- Developing data strategies, **data models**, databases in agile development.
- Worked with a cross functional team to generate backlogs, capture them in **JIRA**, and worked against the committed backlog against the Sprint delivery schedule.
- Continuously iterate **data pipelines** using **Data bricks**, refining data transformations and incorporating feedback from stakeholders to ensure the accuracy and relevance of analysis results.
- Worked on data Validation, data cleansing using **Excel**, **SQL**.
- Performed data cleansing and scrubbing by Filtering and cleaning unwanted data based on well-defined criteria.
- Utilized analytical skills to design, develop and maintain reports, dashboards and visualizations that provide insight to internal partners and external clients in reporting tools like Tableau and Excel.
- Created complex **SQL** joins to derive the right datasets with **MySQL Server**.
- Utilized my Certified **Coding Specialist** (CCS) certification to conduct in-depth analysis of healthcare data, applying **ICD** and **CPT codes** with precision to ensure accurate medical documentation and billing. Leveraged this expertise to improve data quality, streamline coding processes, and enhance overall reporting accuracy.
- Executed data queries across multiple data sources in support of business intelligence reporting needs.
- Utilized **Tableau** to design, develop, enhance, and support **Tableau visualizations** including highly interactive dashboards, scorecards, and reports with drill down to detail and analysis pathways to other supporting reports.
- Created Tableau dashboards using both Extracts and Live connections from relational **database tables/view** and stored procedures, **web services**, and non-relational databases.
- Ensured report validation and audits and processes to ensure **data integrity**.

EDUCATION

Masters in health informatics | New England College, Henniker, NH

Bachelor of Pharmacy | Jawaharlal Nehru technological University, Andhra Pradesh
