

EDUCATION

Mumbai University

Jul 2015- May 2019

Bachelor of Computer Engineering

SUMMARY

Backend Developer with **5+ years in e-commerce (Magento 2)** and **1 year of dedicated Python experience** (Django, Django REST Framework, FastAPI). Proficient in MySQL, MongoDB, AWS, Azure, and DevOps (Docker, Jenkins). My strong background in complex backend logic and API integrations provides a unique foundation for **accelerated growth in Python development**. Seeking to utilize my technical expertise to build scalable systems in a challenging Python Developer role.

TECHNICAL SKILLS

Python Ecosystem: Django, Django REST Framework, FastAPI, SQLAlchemy, JWT Authentication, Dependency Injection

Databases: MySQL, MongoDB, SQLite

Cloud & DevOps: AWS, Microsoft Azure, Docker, Jenkins, Git, GitHub

API Development: RESTful API, GraphQL, Headless Development

E-commerce (Complementary): Adobe Commerce/Magento 2 Framework, PHP, JavaScript

PERSONAL PROJECTS

FastAPI Blog & User Management Platform

- Developed a scalable blog and user management system using FastAPI, SQLAlchemy, and Pydantic, implementing full CRUD operations and JWT-based authentication for secure RESTful APIs
- Applied Dependency Injection and modular route architecture to maximize code maintainability and testability
- Deployed the application to Render cloud platform, automating CI/CD pipelines [Live Demo](#) | [GitHub Repo](#)

Django REST API: Product & User Management (SQLite)

- Designed and built RESTful APIs for product and user management using Django REST Framework, leveraging Django's authentication, custom permissions, and relational database modeling
- Implemented advanced features including pagination, custom modules (countdown timer, expense tracker), and robust error handling for a production-ready microservices architecture
- Automated testing with pytest and DRF test utilities, ensuring API reliability and security
- Published project documentation and code on GitHub for community collaboration [\[GitHub Repo\]](#)

Django + MongoDB: Movie & Viewer Management App

- Developed a non-relational web application for managing movies and viewers using Django and MongoDB (djongo adapter), enabling flexible schema design for complex data relationships
- Built RESTful endpoints for CRUD operations, search, and filtering, supporting scalable data access patterns

Cloud Deployments & DevOps

- Deployed and orchestrated Python projects on AWS Elastic Beanstalk, utilizing both Management Console and eb CLI for scalable, automated deployments
- Integrated GitHub Copilot and other AI coding assistants into the development workflow to accelerate feature delivery and maintain code quality

WORK EXPERIENCE

Jan 2020 – Jan 2025

- Led the development, customization, and deployment of large-scale e-commerce solutions using Adobe Commerce/Magento 2, including multi-site and multi-language store setups, advanced catalog management, and global payment integrations.
- Engineered robust backend systems in PHP and MySQL, building custom modules, RESTful APIs, and integrations with third-party services to extend platform functionality and support business requirements.
- Implemented and optimized payment gateways (Stripe, INIpay, Pine Labs, Boletto, Pix), automated inventory and order management, and enhanced checkout processes, resulting in improved conversion rates and customer satisfaction.
