Professional Experience

Procurant

Software Engineer Intern

June 24-August 24

- Spearheaded the development and optimization of Python-based AI forecast models, achieving a notable **15%** enhancement in prediction accuracy by meticulously fine-tuning algorithms
- Played a pivotal role in processing and analyzing a substantial volume of data, managing over **10,000+** data products. This involved rigorous data preprocessing and extensive feature engineering aimed at ensuring the robustness and reliability of the models for accurate forecasting in dynamic market conditions.
- Collaborated closely with a multidisciplinary team to successfully integrate AI models into **2 critical** production software systems and was essential in ensuring seamless functionality and alignment

Accenture

Software Engineer

June 21-June 23

- Demonstrated strong problem-solving skills by spearheading the development of **5 innovative solutions** aimed at optimizing data processes and workflows, resulting in measurable improvements in operational efficiency
- Effectively executed precise policy adjustments and delivered customized solutions that enhanced client satisfaction by addressing specific needs and consistently resolving technical challenges
- Contributed actively to **3 major enhancements** within project timelines, conducted **8 thorough code reviews**, and adeptly prioritized tasks to streamline project management processes, supported by meticulous JIRA documentation for comprehensive project tracking and team collaboration

Trivia Software

Software Developer Intern

May 20-October 20

- Successfully engineered and implemented a robust GUI-based student record system, demonstrating strong conceptualization and execution skills in software development with cutting-edge technologies such as Swing for GUI development, Hibernate for database management
- Designed and developed interactive charts using JFREE Charts to provide insightful data visualization, facilitating better decision-making and enhancing the user experience with intuitive graphical representations of complex data sets

Skills

Programming skills: Java, Python, JavaScript, R, SQL, HTML, CSS, JSON, Postman, Git, C++ (beginner)

AI skills: Data Preprocessing, Machine Learning, Natural Language Processing

Other: Docker, NumPy, Pandas, Matplotlib, Tableau, Power BI, JIRA, Visual Studio, MS Excel

Certification: Career Edge Knockdown in Lockdown by TCSION, Data Science in Python from University of Michigan on Coursera Software, Engineering by virtual experience by JPMorgan Chase & Co.

Education

Purdue University

Hammond, IN

Master of Science, Computer Science

Coursework: Algorithms, Artificial Intelligence, Computer Architecture, Object Oriented Design, Operating System, Programming Languages, Interpreters and Compilers

University of Mumbai

Mumbai, India

Bachelor of Technology, Information Technology

Coursework: Data Structures, Software Engineering, Data Mining and Business Intelligence, Agile Project Management, Database Management System

Projects

Google Map Simulator

August 23-November 23

- Orchestrated the implementation of Dijkstra's algorithm to analyze and determine the most efficient path within the intricate framework of **15 states** in the northeastern part
- Employed the Bellman-Ford, MST algorithms (Prim's and Kruskal's) to resolve negative edge weights in **12 scenarios**, ensuring accurate path computations

Railway Reservation System Website

August 19-December 19

- Revamped and launched a web application empowering user to seamlessly customize their individual PC configurations or opt for prebuilt systems worked closely with a proficient team of 3, leveraging a tech stack encompassing HTML, CSS, JavaScript, AJAX, JSON, PHP
- Spearheaded seamless database integration, crafted intuitive structures, designed secure user login functionalities, and contributed to key web page development
