

Professional Summary:

Data professional with 3+ years of combined experience as a Data Scientist, Data Engineer, and Data Analyst across healthcare and finance domains. Specialized in AI/ML, predictive analytics, and large-scale data engineering to deliver actionable insights and business impact. Proficient in Python, R, SQL, and cloud ecosystems (Azure, AWS, GCP), with expertise in advanced analytics, ETL pipeline automation, and data visualization using Power BI (with DAX) and Tableau. Experienced in building and deploying ML models (regression, classification, clustering, forecasting, NLP, and LLMs) to optimize patient outcomes, reduce risk, and improve operational efficiency.

Skilled in end-to-end data project lifecycles including ingestion, cleansing, transformation, feature engineering, model training, evaluation, and deployment on cloud-based ML platforms. Hands-on with deep learning frameworks (TensorFlow, PyTorch, Keras), Generative AI (Lang Chain, Hugging Face, OpenAI APIs), and big data platforms (Spark, Databricks, Hadoop, Kafka).

Strong knowledge of data governance and compliance standards (HIPAA, GDPR, SOX) with experience translating stakeholder requirements into scalable solutions. Adept in Agile/Scrum environments, driving cross-functional collaboration, and delivering high-impact analytics at scale.

Technical Skills:

- **Languages:** SQL, Python, R, Java, Scala, HTML, CSS, JavaScript
- **Statistical Methods:** Regression, Hypothesis Testing, A/B Testing, Forecasting, ANOVA, PCA, Cross-Validation, Time Series Analysis
- **AI/ML:** Supervised & Unsupervised Learning, Decision Trees, Random Forest, SVM, Neural Networks, NLP, LLMs (Lang Chain, Hugging Face, OpenAI), Generative AI, XG Boost, Deep Learning (CNN, RNN, LSTM)
- **Big Data & ETL:** PySpark, Databricks, Hadoop, Kafka, Snowflake, Redshift, Big Query, DBT, Apache Airflow, Azure Data Factory, SSIS
- **Visualization & BI:** Power BI (DAX, Power Query), Tableau, Excel (Pivot, VBA)
- **Cloud Platforms:** Azure, AWS (S3, Lambda, SageMaker, Redshift), GCP
- **Data Modeling:** Star Schema, Snowflake Schema, Dimensional Modeling, ER Modeling
- **DevOps & Tools:** Git, Docker, Kubernetes, JIRA, Confluence, ServiceNow
- **Data Governance:** HIPAA, GDPR, SOX, MDM, Metadata Management

Education:

- **Masters in Business Analytics**
University of New Haven, New Haven, USA — Aug 2023 – May 2025
- **Bachelors in Computer Science**
Gitam Deemed University, Hyderabad, India — Jun 2020 – May 2023

Professional Experience:

Client: Humana, USA

Jan 2025 – Present

Role: Data Scientist / Data Analyst

Responsibilities:

- Analysed large-scale healthcare datasets (EHR, claims, patient data) using SQL, Python, and Spark, identifying key trends and reducing readmissions by 15%.
- Developed predictive ML models for chronic care optimization, leveraging regression, decision trees, and ensemble methods.
- Designed LLM-powered clinical query assistant (Lang Chain + OpenAI API) to automate patient support, improving response efficiency by 30%.
- Enhanced ETL pipelines with Azure Data Factory & Snowflake, reducing data latency by 60% and ensuring data quality across ingestion processes.
- Built interactive Power BI dashboards with advanced DAX calculations to track patient journeys and KPIs, cutting manual reporting effort by 40%.
- Enforced HIPAA/GDPR compliance in all analytics workflows, supporting regulatory reporting and secure data access.
- Implemented an Image Recognition (CNN + SVM) anomaly detector and convolutional neural nets (CNN/ Image Recognition) to determine fraud purchase direction.
- Designed and developed Power BI graphical and visualization solutions with business requirement documents and plans for creating interactive dashboards.

Client: Mphasis, India

August 2021 to July 2023

Role: Data Engineer

Responsibilities:

- Developed scalable ETL workflows using Azure Data Factory, Snowflake, and PySpark to streamline financial data integration.
- Built and validated ML models (credit scoring, fraud detection) using Python/R; improved fraud detection accuracy and reduced churn by 12%.
- Implemented A/B testing and statistical modelling for marketing campaigns, enhancing targeting and ROI.
- Automated KPI dashboards (Power BI, Tableau) for financial metrics (CLTV, NPL, delinquency), reducing delivery time by 50%.
- Ensured GDPR and SOX compliance across financial reporting systems and Agile sprint deliverables.
- Partnered with stakeholders to gather requirements, document BRDs/FRDs, and execute UATs for financial data pipelines
- Application of various Artificial Intelligence (AI)/ machine learning algorithms and statistical modelling like decision trees, text analytics, natural language processing (NLP), supervised and unsupervised, regression models
- Performed data cleaning and feature selection using MLlib package in PySpark and working with deep learning frameworks

Projects:

- **Patient Readmission Prediction (Healthcare)**
 - Designed logistic regression models and automated EHR/claims pipelines (SQL, Python, Azure).
 - Reduced hospital readmissions by 15%.
- **Credit Risk Dashboard Automation (Finance)**
 - Built automated dashboards for risk KPIs using cloud-based ETL workflows (ADF + Snowflake + dbt).
 - Improved reporting accuracy and reduced delivery time by 50%.
- **LLM-based Clinical Query Assistant (AI/ML, GenAI)**
 - Developed LangChain + OpenAI-powered chatbot to automate patient queries and medical FAQs.
 - Increased clinical support efficiency by 30%.
