

KarthEEK Sanisetty

Java Full Stack developer

Santa Clara, CA Open for relocation to Seattle, WA | San Francisco, CA | Chicago, IL | Dallas, TX
kartheek.sanisetty9@gmail.com | (704) 363-7496 | [linkedin.com/in/kartheek-sanisetty-94391bb4](https://www.linkedin.com/in/kartheek-sanisetty-94391bb4)

SUMMARY

Full Stack Software Engineer with 5+ years of experience building scalable Java microservices, cloud-native applications, and enterprise AI platforms. Proven expertise in Java 17+, Spring Boot, React, AWS, Kubernetes, and distributed system design. Delivered high-impact solutions at NVIDIA and Amazon, improving performance, reliability, and large-scale AI workflows. Strong in microservices architecture, API development, DevOps pipelines, and cross-functional collaboration with a track record of measurable business impact.

PROFESSIONAL EXPERIENCE

NVIDIA	June 2024 – Present
Software Engineer, Full Stack	Santa Clara, CA
- Engineered enterprise AI workflows integrating NIM and NeMo services, improving model deployment efficiency by 28% through optimized Java microservices and full-stack architecture. - Developed secure data pipelines for the AI Data Platform using Java, Spring Boot, React, and AWS cloud, improving system throughput and reliability. - Implemented distributed processing modules enabling 25% faster enterprise AI inference operations by optimizing JVM performance, asynchronous APIs, and data handling for production. - Enhanced enterprise model governance by building audit-ready services integrating NeMo APIs, reducing compliance verification time by 34% using logging and automated validation. - Leveraged AWS cloud, Kubernetes, Docker, and Terraform to deploy scalable Java microservices with CI/CD pipelines, ensuring reliable observability, monitoring, and performance optimization. - Utilized Spring Boot, Hibernate, REST APIs, GraphQL, and reactive programming to build backend services supporting enterprise AI workflows, improving transactional efficiency by 27% - Implemented front-end interfaces using React, TypeScript, Redux, and micro-frontend patterns integrated with AWS cloud services, enhancing user experience, responsiveness, and performance. - Applied advanced testing practices including JUnit, Mockito, Selenium, and contract testing to ensure reliability, predictable deployments, and zero-regression delivery across Java. - Optimized system performance through caching, distributed tracing, API rate-limiting, and AWS cloud integrations, ensuring consistent scalability, lower latency, and improved responsiveness. - Strengthened development workflows using Git, GitHub Actions, SonarQube, container orchestration, and agile methodologies, enabling faster releases, higher code quality, and collaborative.	
Amazon	June 2019 -July 2023
Software Engineer	India
- Developed scalable Global Selling microservices using Java, Spring Boot and AWS cloud, improving cross-border listing throughput by 32% and reducing processing delays. - Engineered export compliance workflows integrating DynamoDB, SQS and classification rules, increasing automated document approvals by 41% and reducing manual intervention for international. - Implemented event-driven pricing pipelines using Java, Kinesis and AWS cloud, boosting real-time fee accuracy by 29% and enhancing seller revenue visibility marketplaces. - Designed React-based export dashboards enabling unified shipment tracking and catalog status monitoring, improving seller workflow efficiency by 36% and reducing support tickets. - Utilized Java, Spring Boot, Docker and AWS cloud to build resilient microservices, applying domain-driven design, CI/CD automation and observability best practices effectively. - Applied TypeScript, React, Redux and modular component patterns to develop high-performance seller interfaces supporting complex forms, real-time validations and consistent cross-platform user. - Implemented distributed messaging using SQS, SNS and AWS cloud, ensuring reliable asynchronous workflows, reduced coupling, fault tolerance and optimized event processing consistently. - Developed secure REST and GraphQL APIs leveraging OAuth, JWT, input validation, rate limiting and encryption patterns to protect sensitive international seller information. - Optimized database interactions using DynamoDB, Aurora and caching strategies, improving query performance, reducing latency, enhancing throughput and supporting scalable cross-border transaction processing. - Strengthened development workflows using Git, CodePipeline, Docker, SonarQube and automated testing, ensuring maintainable codebases, faster deployments, reduced defects and reliable full-stack delivery.	

TECHNICAL SKILLS

Programming Languages: Java (17+), TypeScript, JavaScript (ES6+), Python, SQL

Back-End Frameworks & Libraries: Spring Boot, Spring Cloud, Hibernate/JPA, Netflix DGS (GraphQL), gRPC, Node.js, JUnit, Mockito, OpenAPI/Swagger

Front-End Technologies: React.js, Angular, TypeScript, HTML5, CSS3, Responsive Design, WCAG 2.1 Accessibility, Cross-Browser Compatibility, Server-Side Rendering (SSR)

Microservices & Architecture: Spring Boot Microservices, API Gateway, Eureka, Circuit Breaker (Hystrix), Docker, Kubernetes (EKS), Helm, Event-Driven Architecture, 12-Factor App Principles, Distributed Systems

APIs & Integrations: RESTful API Design, GraphQL Schema Design, Contract Testing, OAuth 2.0, JWT, Secure API Design, PCI-DSS Integrations

Databases: PostgreSQL, MySQL, DynamoDB, MongoDB

AI / ML Integrations: NVIDIA NIM, NVIDIA NeMo, TensorFlow Serving, NLP Pipelines, gRPC ML Clients, Real-Time Inference Services

Cloud Platforms: AWS (EKS, EC2, S3, Lambda, RDS, DynamoDB, API Gateway, IAM, CloudWatch), Azure, GCP

DevOps & Tools: Git, GitHub, GitHub Actions, Jenkins, AWS CodePipeline, Docker, Kubernetes, Terraform, Maven, SonarQube, REST Assured, Postman

Monitoring & Observability: CloudWatch, Prometheus, Grafana, ELK, Log4j2, OpenTelemetry, Custom Dashboards, APM Tools

Security Practices: IAM Role-Based Access, OAuth 2.0, JWT, Encryption at Rest, Secure Coding (OWASP Top 10), API Gateway Policies, Compliance-Ready Architecture

Development Methodologies: Agile (Scrum), CI/CD Pipelines, TDD, BDD, Cloud-Native Architecture, Microservices Best Practices

Tools & Environments: IntelliJ IDEA, Visual Studio Code, JIRA, Confluence, Bitbucket, GitLab, Smartsheet, Asana, Trello

Soft Skills: Cross-Functional Collaboration, Stakeholder Communication, Mentorship, Problem-Solving, Technical Documentation, Time Management, Code Reviews, Zero-Defect Delivery

EDUCATION

Master in Information & Technology
UNC Charlotte

Bachelor in Computer Science
Sri Venkateswara University College of Engineering
