PROFESSIONAL SUMMARY

- Data Analyst with 1+ years of practical experience turning data into meaningful insights using Python, SQL, and cloud platforms.
- Able to simplify large datasets into interactive visualizations that support smarter, faster business decision-making.
- Experienced in forecasting trends and applying machine learning models to improve strategy and planning.
- Strong background in statistical analysis, data cleaning, and managing end-to-end data workflows.
- Passionate about solving real-world problems with data, from customer behavior insights to crime trend forecasting.

TECHNICAL SKILLS

- **Programming Language:** C, Python
- **Databases:** MySQL, PostgreSQL, Snowflake
- **Cloud Services:** Microsoft Azure
- **Big Data:** Hadoop, Pyspark
- **ML & AI:** Scikit-learn, TensorFlow, NLP (BERT), Forecasting (Prophet, SARIMA)
- **Visualization Tools:** Power BI, Tableau
- **Other Tools:** Git, Jupyter, VS Code, Excel

PROJECT SUMMARY

Data Analyst Intern

Innovate Solutions – Hyderabad, India | Jan 2023 – Dec 2023

- Used Python and SQL to automate reports and clean large datasets, helping reduce errors and save time across teams. Discovered meaningful patterns in customer and sales data, leading to a 10% boost in marketing results.
- Worked closely with different teams to make data easier to understand and use, creating clear dashboards in Power BI and Tableau for quick access to key insights.
- Helped improve how data was stored and shared, making it more useful for everyday decision-making. Applied A/B testing and basic statistics to compare ideas and highlight the most effective options.
- Applied machine learning techniques like clustering and classification to group similar users and predict customer behavior, supporting smarter strategy development.
- Built and managed data pipelines on Microsoft Azure and ran machine learning experiments in the cloud, enabling smoother and more scalable data workflows.

Crime Forecasting & Predictive Policing Using Machine Learning

Capstone Project – University of North Texas | Jan 2025 – May 2025

- Led a real-world project analyzing over 13 million records from the Dallas Police Department to uncover crime patterns and support better public safety planning.
- Developed predictive models using Random Forest, Decision Trees, and Logistic Regression to classify crime types based on time, location, and historical data achieving an accuracy of 68%.
- Improved data reliability by detecting unusual or misleading reports through anomaly detection techniques such as Isolation Forest and Autoencoders.
- Identified high-risk areas in Dallas using K-Means clustering, helping law enforcement optimize resource deployment and response strategies.
- Applied sentiment analysis with BERT based NLP models to classify police reports into emergency and non-emergency categories, increasing prioritization accuracy to 89%.
- Used time series forecasting models like Facebook Prophet and SARIMA to detect seasonal crime patterns and anticipate future spikes, especially during peak periods like holidays and summer.
- Handled the full data science workflow from cleaning and preprocessing raw data to building models and delivering visual insights using tools such as Python, TensorFlow, Scikit-learn, Power BI, and Microsoft Azure.

EDUCATION

Master of Science – Advanced Data Analytics

University of North Texas

2025 | GPA: 3.60/4

Bachelor of Technology – Electronics & Communication Engineering

Vidya Jyothi Institute of Technology

2023 | GPA: 8.38/10

CERTIFICATIONS

DATA CAMP:

PYTHON -

- Introduction to Python | Aug 2024
- Intermediate Python | Aug 2024
- Introduction to Object-Oriented Programming in Python | Sept 2024
- Exploratory Data Analysis in Python | Sept 2024
- Introduction to NumPy | Oct 2024
- Data Manipulation with Pandas | Oct 2024
- Visualizing Time Series Data in Python | Nov 2024
- Understanding Data Visualization | Jan 2025
- Understanding Cloud Computing | Jan 2025
- Supervised Learning with scikit-learn | Feb 2025

SQL -

- Introduction to SQL | Nov 2024
- Intermediate SQL | Nov 2024
- Introduction to Snowflake SQL | Dec 2024
- Database Design | Dec 2024
- Data Warehousing Concepts | Jan 2025
