## SUMMARY

ASU Graduate (May 2025) with a Master's degree in Computer Science and 2 years of experience in full-stack development, object-oriented programming, JAVA microservices and managing CI/CD pipelines seeking full-time opportunities in Software Engineering roles.

## EDUCATION

|                                                                  |                     |
|------------------------------------------------------------------|---------------------|
| <b>M.S. Computer Science</b>                                     | Aug 2023 – May 2025 |
| Arizona State University, Tempe, AZ                              | 3.83/4.0 GPA        |
| <b>B.E. Computer Science and Engineering</b>                     | Aug 2017 – May 2021 |
| Sri Sivasubramaniya Nadar College of Engineering, Chennai, India | 8.5/10.0 GPA        |

## TECHNICAL SKILLS

**Frontend:** Angular, HTML, CSS, JavaScript, React

**Backend:** Core Java, Spring Boot, JPA, RESTful APIs, Python, C, C++, Nodejs

**Database:** Oracle Database, PL/SQL, SQL, RDBMS, NoSQL

**Cloud & DevOps:** AWS (Lambda, S3, SQS, EC2), Docker, Jenkins, CI/CD, Git, GitHub, Bitbucket

**Tools & Platforms:** Jira, Git, Bitbucket, GitHub, Jenkins, Docker, EC2

**Software Development Practices:** Object-Oriented Programming (OOP), MVC Architecture, Agile Methodologies, DevOps, Detail-Oriented, Data Structures, Algorithms

**Certifications:** Oracle database 19c (Aug 2021) from Oracle, JAVA SE8 Programming (Aug 2021) from Oracle, Core Spring (Nov 2021) from Oracle, Microservices architecture (Nov 2021) from Oracle

## PROFESSIONAL EXPERIENCE

**Oracle Financial Services Software Pvt. Ltd, Chennai, India: Associate Consultant** Jul 2021 – Jul 2023

Responsible for implementing software solutions for the Citi Screening Alert Workspace (CSAW) project. Role included feasibility analysis, development, managing CI/CD pipelines, Production deployment support and Proof of Concept analysis.

- Engineered a PL/SQL-based data cleanup solution leveraging Bulk Collect, Global Temporary Tables, and optimized queries, enabling efficient data recovery, high-speed data transfer, and temporary database creation, improving operational efficiency.
- Implemented configuration and profile updates for microservices, AutoSys jobs, and Bash scripts to integrate with an upgraded Oracle 19c Database, utilizing its advanced features and boosting system performance by 20%.
- Developed the Intelligent Assistance System research module to automate monitoring and management of production microservices, employing Bash scripting, CI/CD pipeline creation, database procedures, and AutoSys for proactive incident detection and reduced manual intervention.
- Delivered a proof of concept for security monitoring redesign in ArcSight, enabling containerized microservice logs to be formatted, processed, and shared via AutoSys, improving log accessibility and security compliance.
- Designed and implemented a front-end Angular application enabling bulk alert disposal requests for microservices, enhancing user efficiency and reducing repetitive tasks.
- Led and coordinated production releases across NAM, EMEA, APAC, and BANAMEX regions by deploying builds, managing pre-production to production promotion, collaborating with the release team, and conducting post-deployment sanity testing to ensure zero downtime and smooth rollouts.

## PROJECTS

**E-Commerce Application** July 2025

- Developed a complete e-commerce application using react, spring boot, core java, MySQL database, JPA, Spring security, DTO and DAO design patterns, REST API implementation, pagination and integration with Stripe
- Version control was done using GIT and implemented industry standards for coding and design patterns. Docker container was used to run MYSQL database for data persistence

**Poll Creation and Voting Application** July 2025

- Created an application to create polls and allow users to vote on polls using Spring boot, Angular, Mysql, JPA, Lombok and RETST APIs
- Used JpaRepository for persistence, Lombok for reducing boilerplate code and a docker container for running MySQL Database for the backend data storage.

**Columnar Database Implementation using Java Minibase** May 2024

- Developed a columnar database using the row store database sandbox environment, Java minibase.
- Used the MVC (Model, View, Controller) Architecture to program columnar file scan, bitmap index, CRUD operations, Batch inserts in a columnar database design.
