SUMMARY

Data Engineer with 3+ years of experience designing scalable ETL/ELT workflows, automating data pipelines, and transforming large datasets into analytics-ready structures. Strong in SQL, Python, PySpark, AWS, and ADF, with a proven ability to improve data quality, optimize processing performance, and support business analytics and ML initiatives. Adept at collaborating with cross-functional teams, delivering reliable data solutions, and simplifying complex technical problems for business stakeholders. Open to opportunities across Data Engineering, ETL Development, and Data Analytics.

TECHNICAL SKILLS

Languages: Python, SQL, PySpark

Cloud: AWS (S3, Glue, Redshift, Lambda), Azure Data Factory

Databases: Snowflake, Redshift, MySQL, PostgreSQL, NoSQL

Big Data: Spark, Databricks

ETL / Data Tools: ADF, Glue, Airflow, SSIS

Visualization: Power BI, Tableau

Other: GitHub, Agile/Scrum, Data Modeling, Data Warehousing

PROFESSIONAL EXPERIENCE

CVS Health — Data Engineer

Sep 2023 – Present

Remote / USA

- Designed and optimized AWS Glue & Redshift ETL pipelines processing 3–5 TB/day, reducing ingestion time by 30%.
- Built PySpark transformation workflows to process large structured and semi-structured datasets, improving throughput by 40%.
- Developed analytics-ready schemas in Redshift/Snowflake, enhancing BI reporting performance by 25%.
- Automated data validation, logging, and pipeline monitoring, reducing data discrepancies by 15%.
- Collaborated with analytics, product, and ML teams to support feature pipelines and downstream data needs.
- Integrated API, cloud, and internal data sources to ensure consistent high-quality data availability.
- Optimized SQL and Spark jobs for better performance and cost efficiency across cloud workloads.

.Powersoft Global Solutions — Data Engineer

Jul 2022 – Jul 2023

Hyderabad, India

- Developed SQL queries, views, and stored procedures to support reporting and data transformation workflows.
- Built Power BI/Tableau dashboards to visualize sales and operational metrics for leadership teams.
- Automated ETL jobs and recurring data refresh tasks, reducing manual effort by several hours weekly.
- Performed exploratory data analysis using Python (Pandas, NumPy) to support strategic business insights.
- Partnered with business teams to translate requirements into data models and ETL logic.
- Improved data validation and reconciliation processes, reducing reporting errors by 20%.
- Contributed to Agile sprint planning and enhanced internal documentation for data projects.

EDUCATION

Master of Science in Business Analytics

University of Louisville | Louisville, Kentucky

Aug 2023 – Aug 2024
