SUMMARY

Full Stack Software Engineer with 3+ years of proven success delivering high-impact, enterprise-grade solutions in the Financial and Technological sectors. Well-versed in architecting scalable, secure microservices and cloud-native applications using Java, Spring Boot, and RESTful APIs, combined with modern front-end technologies like React and Angular to create seamless user experiences. Demonstrated ability to drive digital transformation by integrating AI-driven automation, real-time data processing, and advanced analytics, resulting in enhanced operational efficiency and customer engagement. Proficient in leveraging AWS, Docker, Kubernetes, and CI/CD pipelines to accelerate delivery cycles while maintaining resilient security and performance. A collaborative solution-driven professional and forward-thinking leader dedicated to innovation, quality, and delivering measurable business value in fast-paced, mission-critical environments.

SKILLS

- **Languages:** Java, Python, SQL, JavaScript, TypeScript, Bash, Shell
- **Frameworks:** Spring Boot, Spring MVC, Hibernate, J2EE, JSP, Servlets, Django, FastAPI, Flask
- **Frontend:** Angular, React.js, Redux, HTML5, CSS3, Bootstrap, jQuery, AJAX
- **Testing Tools:** JUnit, Mockito, Selenium, Postman, JMeter
- **Databases:** Oracle 10g/11g, MySQL, PostgreSQL, MongoDB, Snowflake, DB2, GraphQL
- **Cloud & DevOps:** AWS (EC2, S3, RDS, Lambda, ECS), Microsoft Azure (Blob Storage, Functions, Logic Apps), GCP (BigQuery, Cloud Storage), Docker, Kubernetes, Jenkins, GitHub Actions, Maven, Gradle, Terraform
- **Web/App Servers:** Apache Tomcat, WebLogic, Nginx
- **Other Tools:** Git, SVN, IntelliJ IDEA, Eclipse, VS Code, JIRA, Rally, VersionOne, Confluence
- **Big Data & Analytics:** Apache Kafka, Spark, PySpark, Hadoop, Tableau, Power BI
- **Version Control & CI/CD:** Git, GitHub, GitLab, Azure DevOps, Jenkins, Docker, Kubernetes
- **Operating Systems:** Linux, Unix, Windows, macOS
- **Methodologies:** Agile/Scrum, CI/CD, SDLC, Test-Driven Development (TDD)

PROFESSIONAL EXPERIENCE

Software Engineer – MetLife Insurance, USA

June 2024 – Present

- Architected and delivered Spring Boot microservices supporting policy administration, underwriting, claims, and billing workflows, improving system scalability and transaction reliability.
- Unified policy management, customer profiles and actuarial elements through the creation of RESTful APIs which resulted in reducing infrastructure costs by 10% through endpoint consolidation.
- Engineered multithreaded Java services to process high-volume policy and claims transactions with low latency, enabling real-time risk assessments.
- Pioneered the development of intuitive React.js dashboards, delivering real-time insights for policy servicing, claims tracking, and operational risk monitoring; decreased dashboard error rate from 5% to 0.5%.
- Integrated Hibernate ORM with PostgreSQL, optimizing queries and ensuring secure persistence of policy and customer data.
- Enforced role-based access control using Spring Security with OAuth2/JWT, maintaining compliance with PII, HIPAA, and insurance regulations.
- Orchestrated comprehensive unit and integration tests utilizing JUnit, Mockito, and Postman, attaining 92% test coverage and bolstering release stability across policy systems.
- Assisted in claims processing by constructing a Kafka event streaming architecture, delivering a 25% reduction in settlement time and a 35-40% throughput improvement.
- Leveraged machine learning models using Python libraries for claims risk scoring, fraud detection, and loss prediction, integrating ML inference services with Spring Boot microservices to support real-time underwriting decisions and claims validation.

Technologies: Java, Spring Boot, Microservices, REST APIs, React.js, Hibernate, PostgreSQL, Kafka, Spring Security, OAuth2/JWT, Multithreading, JUnit, Mockito, Postman, Docker, Kubernetes, AWS, Git, Agile

Software Engineer – US Bank, USA

Jan 2023 – May 2024

- Delivered 3 Spring Boot microservices integrating customer accounts, credit products, and rewards programs for digital banking, improving API response time by 30% and improving user experience.
- Unified diverse systems by constructing RESTful APIs for payment networks, banking systems, fraud services, credit bureaus, and customer platforms, increasing transaction throughput by 30%.
- Spearheaded the construction of React-based user interfaces for account onboarding, fund transfers, and bill payments, reducing security vulnerabilities identified during penetration testing by 20% and ensuring compliance.
- Secured customer and internal user access using Spring Security with JWT and OAuth2, ensuring compliance with PCI-DSS, GLBA, and PII regulations.
- Constructed and deployed React.js dashboards for monitoring live transactions, managing account lifecycles, evaluating risk,

and gaining operational perspectives; maintained 99.9% uptime, ensuring continuous data availability.

- Automated transaction reconciliation, balance validation, interest calculations, and fee processing using Java-based services, reducing manual processing by 40%.
- Executed unit, integration, and end-to-end testing using JUnit, Mockito, Selenium, and Postman, achieving 90%+ code coverage and high system reliability.
- Deployed microservices on AWS using ECS and Kubernetes, ensuring high availability, scalability, and streamlined CI/CD pipelines.
- Automated build and deployment workflows using Jenkins and GitHub Actions, reducing release cycle time and improving deployment reliability.

Technologies: Java, Spring Boot, Microservices, REST APIs, React.js, Spring Security, OAuth2/JWT, PostgreSQL, Oracle, Kafka, Docker, Kubernetes, AWS, JUnit, Mockito, Selenium, Postman, Git, Agile

Software Developer – Solara Home, India

Jun 2021 – Jul 2022

- Integrated Python based microservices to support regulatory compliance of consumer home and kitchen products. These tools processed 24,000 items, ensuring accurate data sync.
- Accelerated data exchange between e-commerce platforms and CRM systems by 22% after architecting RESTful APIs using FastAPI and Flask, which was immediately praised by the director.
- Revolutionized real-time monitoring of product availability, sales performance, and inventory levels by creating React.js dashboards that increased inventory turnover by 10%.
- Revamped product discovery and checkout processes, cutting cart abandonment rates by 15% and identified top reason why users shop through focus groups, directly aligning with Solara's wellness-driven mission.
- Implemented secure authentication and authorization using OAuth2/JWT, ensuring protection of customer PII, payment data, and compliance with consumer data regulations.
- Optimized data persistence and analytics pipelines using SQLAlchemy with MySQL supporting sales reporting, demand forecasting, and compliance dashboards.
- Collaborated closely with product, marketing, and finance teams to enhance Python-based pricing, promotions, and demand forecasting models, automating sales performance and operational reporting.

Technologies: Python, FastAPI, Flask, RESTful APIs, React.js, OAuth2, JWT, SQLAlchemy, MySQL, JavaScript (ES6+), HTML5, CSS3, TailwindCSS (if applicable), Docker, Git, Agile methodologies, Postman (for API testing).

PROJECTS

Agentic AI Automation Platform

- Engineered Python-based automation tools, incorporating AI agents, for MCP, elevating process efficiency by 30% and resulting in the redeployment of two team members on higher priority tasks.
- Containerized microservices using Docker and integrated with OpenWebUI and AI models, enabling AI-driven automation, faster deployments, and a 45% improvement in workflow orchestration.

AI-Powered 3D Website

- Integrated DALL-E AI API into interactive React-based 3D shirt customization platform; boosted user engagement, lowered bounce rates by 25%, and achieved a 15% conversion rate to personalized shirt downloads.
- Implemented Higher Order Components (HOCs) and modular design patterns to enhance code reusability and scalability, cutting development time for new features by 20%.

Alumni Portal

- Built a collaborative website for educational institutions and alumni using React with Context API for frontend state management and JWT for secure authentication of 150 users.
- Automated API testing with Postman, achieving 85% endpoint coverage; migrated legacy system endpoints to a Spring Boot REST API with MongoDB, which accelerated data retrieval speed by 35%.

CERTIFICATION

Azure Fundamentals Certification (AZ - 900) from Microsoft

AWS Cloud Practitioner Certification (CLF-C01) from Amazon

AWS Academy Data Engineering Certification (ADEv1EN-US-55189) from Amazon

AWS Academy Machine Learning Foundation Certification (AMLFv1EN-62359) from Amazon

EDUCATION

Master of Science, Information Technology and Management – University of Texas at Dallas, USA

Bachelor of Engineering, Computer Science – CVR College of Engineering
