Dahegam, India

PROJECTS

Data analysis- Breast cancer

- Analyzed a dataset of 1,000+ patients using **SPSS** and **Python** to assess risk factors and survival trends. Conducted **data cleaning**, applied **t-tests**, **ANOVA**, and **logistic regression**, and created **visualizations** in **Matplotlib/Seaborn**. Findings supported **public health awareness programs** promoting early screening in high-risk groups by 20%.

Sep 2024 – Dec 2024

Chronic Disease Trend Analysis | Python, Pandas, Matplotlib

- Developed a data analysis pipeline to clean, visualize, and interpret U.S. mortality trends by cause, time, and gender using public health data. Automated visual reporting and generated insights to highlight top contributors to death rates over time.

SKILLS

Data Analysis: Data visualization | Hypothesis testing | Regression modeling | Statistical Analysis

Statistical software: IBM SPSS | Python(Pandas, NumPy) | Power BI | Excel | Microsoft Office

Healthcare-specific: Epidemiological Analysis & modeling | Public health research | Program planning, evaluation, and implementation | Biostatistics | Environmental health | Global Health Analysis

CERTIFICATES

Registered Nurse(Gujarat, India) — License no:- B-||/H-||-9043

ORGANIZATIONS

Urban Health Center

- Public Health Data analysis, Program planning, and implementation
- COVID vaccination, Check-up camps, Cleanliness drives, and Health education.

Aug 2021 – Sep 2021
Dahegam, India
