

# KAUSHIK IYER

SOFTWARE ENGINEER

(541) 286-2510

iyerkaushik82@gmail.com

<https://www.linkedin.com/in/kaushik-iyer7/>

## Summary

I am passionate about translating AI and data into real-world impact and aspire to solve complex problems, turning ideas into measurable results. What I lack in experience, I make up for with curiosity, collaboration, continuous learning, and a drive to contribute beyond just writing code.

## Skills

**Languages and Frameworks:** Python, SQL, TensorFlow, scikit-learn, pytorch, R, Javascript, HTML, CSS

**Certifications:** IBM Data Science, Google Data Analytics, Google Business Intelligence, Machine Learning on Google Cloud, Deep Learning from [deeplearning.ai](#), AWS Certified AI Practitioner

**Others:** Tableau, PowerBI, ReactJS, Git, PostgreSQL

## Education

**Masters In Computer Science**

Oregon State University | 2025 Grad

**Bachelors of Engineering in Computer Engineering**

Mumbai University | 2022 Grad

## Academic Projects

**AI Workflow Engine** ([GitHub](#))

Oregon State University | 2025

- **Design & Development:** Created AIFlow, a domain-specific language enabling minimal-code integration of multiple AI operations, eliminating boilerplate and accelerating AI workflow creation for cross-functional teams.
- **Optimization & Impact:** Built a modular workflow engine with conditional branching, data transformation, and templating, **reducing AI pipeline development time by 40%** and improving maintainability through declarative syntax.

**AI-Powered Trading Simulator** ([GitHub](#))

Oregon State University | 2025

- **Design & Development:** Developed an AI-powered trading simulation platform using a multi-agent architecture to teach and optimize algorithmic trading strategies under diverse market conditions.
- **Optimization & Impact:** Designed 14 specialized AI agents and implemented quantitative models in Python leveraging statistical analysis and financial APIs, **achieving 18% higher simulated returns and 12% lower volatility compared to benchmark indices**.

**Global Text Classification System** ([GitHub](#))

Oregon State University | 2024

- **Design & Development:** Built a **multilingual text classification system analyzing 50K+ text samples**, addressing the challenge of accurate language detection across diverse global content.
- **Optimization & Impact:** Applied advanced ML algorithms with Python/TensorFlow, **improving detection accuracy by 15%, reducing false positives by 8%**, and enabling confidence-threshold based content moderation for non-English users.
