

KAVERI BHALCHANDRA KONDE

San Jose, California | ✉ kkonde@ncsu.edu | ☎ (919) 633-8273 | [in linkedin.com/in/kaveri-konde-56aaa2193/](https://www.linkedin.com/in/kaveri-konde-56aaa2193/)

Education

North Carolina State University

Master of Science in Computer Engineering

Aug 2023 – May 2025

Raleigh, NC

Vidyalankar Institute of Technology, University of Mumbai

Bachelor of Engineering in Electronics Engineering

Aug 2017 – Jun 2021

Mumbai, India

Relevant Coursework

- UVM Functional Verification
- ASIC Verification
- ASIC and FPGA Design with Verilog
- Microprocessor Architecture
- Advanced Microarchitecture
- Advanced Computer Architecture: Data Parallel Processors (GP-GPU)
- Embedded Systems Architecture
- Computer Networks

Experience

North Carolina State University (Prof. Ed Gehringer)

Student Researcher

Jan 2025 – May 2025

Raleigh, NC

- Analyzed 100+ student submissions, generating data-driven insights that improved grading efficiency by 20%.
- Evaluated dual- vs. single-submission policies, identifying patterns that increased student engagement and reduced late submissions.
- Assessed LLM-generated content in academic work, informing updated integrity guidelines for coursework.

SuperHumanrace

Quality Assurance Analyst

Aug 2021 – Jun 2023

India

- Executed functional, regression, and performance testing for web and mobile apps, uncovering 150+ critical defects and ensuring stable product launches.
- Designed and maintained comprehensive test plans and reusable test case libraries, boosting test coverage by 30% and reducing production defect leakage.
- Partnered with developers to triage issues and implement fixes faster, reducing bug resolution cycle time by 25%.
- Introduced automation frameworks and integrated CI/CD pipelines, cutting manual testing effort by 20% and aligning QA processes with developer workflows.

Projects

Reddit SentimentFlow: MLOps, Full-Stack | *Python, Apache Airflow, Docker, Github Actions, AWS*

- Built an end-to-end subreddit moderation system that automates content sourcing with an Airflow pipeline, enables zero-touch deployments via Docker and CI/CD, and delivers at-a-glance insights through a React monitoring dashboard saving 10+ hours of manual moderation per week.

CarePulse: Real-Batch Streaming Pipeline | *Python, Databricks, Spark, AWS, Kafka*

- Built a modular healthcare analytics pipeline on Databricks using Apache Spark and Delta Lake, processing 10,000+ patient records and streaming data with AWS Kinesis across a medallion architecture (Bronze → Gold).
- Implemented SCD Type 2 for patient and hospital dimensions with CDC logic to track 5+ city changes per patient over time.
- Generated Gold-layer KPIs from 100K+ vitals using PySpark, identifying 150+ high-risk patients based on health metrics.

Research

“Reflective Homework as a Learning Tool: Evidence from Comparing 13 Years of Dual vs. Single Submission”, Accepted, *Frontiers in Education (FIE) Conference*, 2025. Paper ID: 1571118602.

Technical Skills

Languages/OS: Python, C++, HTML/CSS, JavaScript, SQL, Linux

Cloud & Data Platforms: AWS (S3, EC2, Kinesis, Redshift), Databricks, PostgreSQL, MongoDB, Qdrant

Frameworks & Libraries: Spark, Airflow, Kafka, DBT, FastAPI, React.js, Node.js, Langchain, Tensorflow, Pandas

DevOps & Tools: Docker, Kubernetes (K8s), Terraform, Git, GitHub Actions (CI/CD), Redis, Celery
