

PROFESSIONAL SUMMARY

Around 8 years of experience in Data Engineering and Data Analysis, including Designing, Developing, Testing, Production Support and implementing data models for enterprise-level applications by using Python.

- Good experience in all phases of Software Development Life Cycle (SDLC), Requirement Analysis, Design, Development and Testing on various Development and Enhancement Projects.
- Experience working on various applications using python integrated IDEs like PyCharm, VS Code.
- Skilled at designing the automation framework using Shell scripting.
- Expertise in writing test plans, test cases, test specifications and test coverage along with Unit testing/Test driven Development (TDD), Load Testing.
- Extensive experience in Text Analytics, generating data visualizations using Python.
- Expertise in Data Analysis, Data Validation, Data Cleansing, Data Verification, and identifying data mismatch.
- Experienced in developing Web Services with Python programming language.
- Used Git Hub Repository for Deploying the applications through Jenkins Continuous Integration and Continuous Deployment.
- Experience in web/application development by using Python, Flask, Django, HTML, CSS, JavaScript, jQuery, MySQL, PostgreSQL and SQLite.
- Proficient in writing Subqueries, Stored Procedures, Triggers and Functions on Oracle, MySQL and PostgreSQL database.
- Experience in developing web applications and implementing Model View Control (MVC) architecture using server-side applications using Django.
- Experience in the Design and Development of ETL methodology for supporting Data Migration, data transformations & processing in a corporate-wide ETL Solutions.
- Developed a cloud-based inventory management system using Flask, AWS RDS, and DynamoDB for real-time product tracking and reporting.
- Proven expertise in building scalable applications using Flask, AWS/GCP, and advanced Python programming techniques such as async I/O, Fast API, and multi-threading.
- Experienced in AWS services like IAM, EC2, VPC, Lambda, Dynamo DB, Cloud Watch, Auto Scaling, S3, and Route 53.
- Good experience in the AGILE delivery process of software using SCRUM.
- Adept at creating data models, including star and snowflake schemas.
- Good communication skills, work ethics, and the ability to work in a team efficiently with good leadership skills.
- Actively participated in Agile/Scrum ceremonies (sprint planning, retros, daily standups) and used Jira for tracking Snowflake development tasks and bug fixes.
- Experienced in working through a solution from end-to-end, meeting project deadlines and delivering solutions in a professional manner.
- Excellent analytical and problem-solving skills and ability to work on own besides being a valuable and contributing team player.

TECHNICAL SKILLS

Languages	: Python, C, SQL, Shell/Bash Scripting
Cloud Technologies	: AWS (ECS, AWS Lambda,S3)
Databases	: Oracle, RDS (PostgreSQL, MySQL), Redshift, Snowflake
Frameworks	: Django, REST framework, Flask
Tools	: PyCharm, SQL Developer, TOAD, VS Code, Eclipse, Docker
Big Data Ecosystems	: Hadoop, MapReduce, HDFS, HBase, Hive, Impala, PySpark.
Versioning tools	: Git, GitHub, Jenkins
Visualization/ Reporting:	Tableau, Power BI
Operating System	: Windows, Unix, Linux

EDUCATION

Bachelor of Technology in Computer Science, 2015

Vardhaman college of engineering and technology, JNTU, HYD, INDIA

PROFESSIONAL EXPERIENCE

Moody's, Charlotte, NC, USA

Oct 2024 – Till Date

Role: Sr. Python Developer

Moody's Corporation is a global financial services company best known for its credit rating agency, Moody's Investors Service. Moody's Analytics, which provides data, software, and analytical tools to help businesses and financial professionals manage risk, analyze market trends, and make strategic decisions.

Responsibilities:

- Involved in all phases of Software Development Life Cycle (SDLC) using Agile methodology.
- Participated in Agile scrum meetings, estimating and tracking user stories in Jira, Analyzing Graphs, Bugs, and defects.
- Assisted the application consultant in understanding the client's requirements and how they will be integrated into our system.
- Perform data transformations in Databricks using PySpark/SQL.
- Developed a data platform and took part in requirement gathering and analysis phase of the project in documenting the business requirements.
- Developed and maintained scalable web applications using Python and Django, implementing robust backend solutions with RESTful APIs and database management using Django ORM.
- Ingest raw data from AWS sources (S3, RDS, DynamoDB) and external sources (APIs, on-prem databases) into Databricks.
- Implemented an ETL framework using AWS Glue and Python, streamlining data processing and integration tasks.
- Collaborated with DevOps teams to automate server provisioning, application deployment, and monitoring using Docker.
- Utilized Pandas for data cleaning, transformation, and analysis, processing large datasets for efficient reporting and decision-making.

- Designed and developed ETL pipelines using Snowflake's Snow pipe feature to continuously load data from various sources including SQL Server into Snowflake data warehouses.
- Built robust ETL pipelines using Kafka to ingest, process, and store large datasets, ensuring data consistency and fault tolerance across systems.
- Implemented data quality checks and cleansing processes to ensure data integrity and reliability within Snowflake datasets.
- Designed, implemented, and maintained data pipelines and processing systems using the Apache Kafka.
- Integrated AWS services (Lambda, S3, DynamoDB, RDS) for scalable cloud-based solutions, implementing CI/CD pipelines for automated deployment.
- Set up Lambda triggers to automatically process new data uploaded to AWS S3, reducing manual intervention and speeding up the data pipeline.
- Implemented data processing pipelines using AWS Lambda for automated data ingestion and analysis.

Environment: Python, Django, PyCharm, SQL Server, GIT, Cloud Hub, Jenkins, AWS S3, Jira, Flask, snowflake.

Verizon (TCS), HYDERABAD, IND

Jan 2021 – May 2022

Role: Sr. Python Developer

Verizon Communications Inc. is a major American telecommunications company, primarily known for providing wireless services, broadband, and digital television services. Verizon also operates a large network infrastructure, offering internet, TV, and phone services under the brand Verizon Fios.

Responsibilities:

- Exposed to various phases of Software Development Life Cycle (SDLC) using Agile - Scrum Software development methodology.
- Participated in Daily stand-up calls in a Scrum Environment and discussed about tasks completed in the present sprint.
- Designed, implemented, and maintained data pipelines and processing systems using the Hadoop ecosystem (Hadoop, HBase, Parquet, Apache Kafka, Spark Streaming).
- Optimized Hive workloads on Hadoop, implementing query optimization, indexing, and partitioning for data warehousing solutions using Apache Hive.
- Deployed and managed Docker containers on AWS Elastic Container Service (ECS), creating scalable and reliable data processing workflows.
- Built and deployed data processing pipelines using AWS Step Functions, coordinating the execution of Lambda functions, Glue jobs, and other AWS services
- Migrated ETL jobs to PySpark scripts for transformations, joins, and pre-aggregations.
- Created scripts for data modelling and data import and export.
- Designed and implemented scalable data architectures and ETL pipelines on Hadoop, using Hadoop Distributed File System (HDFS) and Apache Spark for managing and processing big data workloads.
- Identified and resolved Hadoop data-related issues, providing technical support to users.
 - Performed quality checks, cleaning, and preprocessing, and performed ETL with Hadoop, Impala, and Hive on HDFS and SQL Server.
- Designed and implemented complex Airflow DAGs (Directed Acyclic Graphs) to automate data extraction, transformation, and loading (ETL) processes across multiple systems.
- Worked on CI/CD tool Jenkins to automate the build process from version control tool into testing and production environment, managed build results in Jenkins and deployed using workflows.
- Experienced in Python SDK - Python extension module that provides users with the ability to write custom requirements.
- Assisted in migrating legacy systems to cloud infrastructure, primarily AWS, using RDS, DynamoDB.
- Helped in interactive API documentation for specific Python SDK methods.

- Developed framework for converting existing PowerCenter mappings and to PySpark (Python and Spark) Jobs.
- Optimized Airflow DAGs for improved performance, reducing task execution time by identifying inefficient operations and parallelizing tasks when possible.
- Automated data extraction and reporting through Airflow workflows, ensuring real-time or batch data updates for business-critical decision-making.

Environment: Python, PySpark, Hadoop, HBase, Cloudera, PostgreSQL, GIT, Django, Jenkins, REST API, XML, JSON, AWS, SNS, SQS.

UNUM (TCS), HYDERABAD, IND

May 2017 - Dec 2020

Role: Python Developer

Unum Group is a leading provider of financial protection benefits, offering a range of insurance products for individuals and businesses. It is often recognized for its focus on disability insurance, particularly short-term and long-term disability coverage.

Responsibilities:

- Involved in business requirement analysis sessions for requirements gathering, analysis, design, implementing, testing and preserving python applications.
- Analyzed and prepared time estimates for the assigned tasks.
- Developed internal tools and automation scripts using Python and Shell scripting to increase operational efficiency and reduce manual work.
- Coded model level validation using Python programming with emphasis on web security.
- Handled Business logics by backend Python programming to achieve optimal results.
- Developed views and templates in Django to create a user-friendly website interface.
- Extensively used Python/Django Framework for developing backend of web applications.
- Developed web services using Restful technology to support JSON and XML.
- Created new connections through applications for better access to MySQL database and involved in writing SQL & PL SQL - Stored procedures, functions, sequences, triggers, cursors, object types etc.
- Developed and tested many features in an Agile environment using Python, Django, HTML5, CSS, JavaScript, Bootstrap.
- Used Pandas in Python for Data Cleansing and validating the source data.
- Programmed a utility in Python that used multiple packages (NumPy, SciPy, Pandas).
- Worked on different data formats such as JSON, and XML.
- Used GIT as Source control repositories with regular code reviews and pull/merge requests.
- Collected data needs and requirements by Interacting with the other departments.
- Organized and participated in Agile Scrum meetings.

Environment: Python, Django, HTML, Bootstrap, JavaScript, jQuery, Pandas, MySQL, Restful APIs, Linux, Agile, JIRA, GIT.

Humana (TCS), HYDERABAD, IND

Oct 2015 – April 2017

Role: Python Developer

Humana Inc. is a leading American health insurance company, primarily known for providing health insurance plans to individuals, families, and employer groups. Humana is one of the largest providers of Medicare

Advantage plans, which offer health benefits to seniors and people with disabilities, in addition to its offerings in the individual and group health insurance markets.

Responsibilities:

- Participated in Daily stand-up calls in a Scrum Environment and discussed about tasks completed in the present sprint.
- Participated in internal meetings during the requirement analysis and design of the project.
- Designed and developed Python based API (RESTful Web Service) to interact with company's website.
- Wrote Python code and actively participated in the procedure to automate processes.
- Implemented Python code to fix bugs and provide upgrades to existing functionality.
- Created backend database SQL stored procedures. Created and updated complex views and stored procedures in MySQL.
- Created a Git repository and added the project to GitHub.
- Developed views and templates with Python and Django view controller and templating language to create user-friendly website interface.
- Used Python based GUI components for the front-end functionality such as selection criteria.
- Exported/Imported data between different data sources using SQL Server Management Studio.
- Used Pandas package to retrieve and analyze data.
- Worked on development of SQL and stored procedures on MYSQL.
- Participated in multiple sprint cycles, addressing requirements for UI development.
- Utilized Agile process and JIRA issue management to track sprint cycles.

Environment: Python, Django, JDBC, Oracle, SQL, JIRA, MySQL, PLSQL, GitHub.
