kavyab3518@gmail.com | (901) 631 7834 | Memphis TN | [LinkedIn](#) | [GitHub](#)

Professional Summary

Java Full Stack Developer with around 4 years of experience driving projects through the entire SDLC, expert in design, development, implementation, and deployment, ensuring integration across front-end and back-end for project completion. Expertise in Spring Boot, Spring MVC, Spring REST, React.js, and Angular, developing robust, scalable, and user-friendly web applications to drive business growth and efficiency. Proficiency in build tools, version control Git, CI/CD pipelines, containerization Docker, API development GraphQL, RESTful APIs, testing frameworks, API documentation, and Apache Kafka.

Education

Master's in Computer Science | University of Memphis, Memphis, TN

Dec 2024

Bachelor's in computer science | Bhoj Reddy Engineering College for Women, Telangana, India

Nov 2020

Skills

Methodologies: SDLC, Agile/Scrum, TDD

Languages: C/C++, Java, Python, PHP, C#, JavaScript

Front End: HTML5, CSS3, Tailwind CSS, Bootstrap5, jQuery, Ajax, XML, Redux, Ruby on Rails, React.js, Angular.js

Backend: Spring REST, Spring Cloud, Spring Boot, Spring MVC, Spring Security, Spring Data JPA, Hibernate, Django, Node.js

Cloud: AWS (S3, EC2, Lambda, Fargate, RDS, API Gateway, SQS/SNS, EKS), Google Cloud Platform

Database: MySQL, PostgreSQL, MongoDB, Neo4j

Testing & Other Skills: Swagger UI, JUnit, Mockito, Postman, Jira, Pandas, IntelliJ IDEA, VS Code, OAuth 2.0

CI/CD & DevOps Tools: Maven, Gradle, Git, GitHub, GitLab, Jenkins, Apache Kafka, RabbitMQ, GraphQL, Docker, Grafana, Kubernetes

Work Experience

Freddie Mac, USA | Java Full Stack Developer

Jun 2024 – Current

- Led the JavaScript applications to React.js, modernizing the front-end architecture to enhance the maintainability and performance of existing codebases, implementing reusable React components, and optimizing state management using Redux and Context API.
- Enhanced Java application security by implementing Spring Security with robust authentication mechanisms (OAuth2, JWT), leading to a 25% reduction in security vulnerabilities and strengthening access control.
- Integrated Kafka with a microservices architecture, enabling asynchronous, event-driven communication across distributed systems, resulting in a 30% reduction in API response times and improved system scalability.
- Leveraged AWS services (EKS, S3, EC2) to design, deploy, and manage scalable microservices architecture, resulting in a 20% reduction in infrastructure costs and an increase in application performance.
- Enhanced robust CI/CD pipeline using Jenkins and Docker, automating build, test, and deployment processes for Java applications, resulting in 10% more frequent deployments with fewer errors and improved development velocity.

Intellogi Technologies Pvt Limited, India | Full Stack Developer

Dec 2020 – Sep 2022

- Created high-performance RESTful APIs using Spring Boot and Spring REST, enabling seamless integration between microservices, third-party applications, and client-facing platforms.
- Utilized asynchronous messaging using JMS with RabbitMQ, enhancing the system and decreasing database load by 30% through decoupled message processing.
- Implemented unit testing strategies using JUnit, ensuring robust test coverage for web application components and improving code reliability, while adopting Agile methodologies to enhance collaboration, and project delivery efficiency.
- Employed stored procedures, triggers, and functions in SQL databases to automate business logic, enforce data consistency, and optimize query performance reducing redundant application-side processing and improving overall database efficiency.
- Streamlined deployment and reduced provisioning time by 30% by automating the deployment of Java applications on AWS Elastic Compute Cloud using CI/CD pipelines built with Jenkins, OpenShift, and AWS CloudFormation.

Hexaware Technologies, India | Java Developer

Nov 2019 – Oct 2020

- Delivered comprehensive unit and integration tests using Java Spring Boot (JUnit), automating backend API calls to enhance reliability, and wrote 10+ tests for API sanity testing.
- Executed Spring Cloud Stream and Spring Cloud Task, enabling a seamless scale-up from 5 to 15 microservices, which enhanced system capacity to handle twice as many concurrent users.
- Implemented RESTful endpoints (Controllers), Business Layer, and DAO Layer using Hibernate/JDBC Template, leveraging Spring IoC (Dependency Injection) to enhance scalability and maintainability of the application architecture.
- Developed and deployed a GraphQL API server using the graphql-http library, optimizing data retrieval from MongoDB and enhancing query efficiency, resulting in faster data transfers and reduced payload size between client and server

Projects & Outside Experience

Predictive Machine learning model for breast cancer

Memphis, TN, USA

- Technologies Used:** ML Model (logistic regression, random forest, support vector machine (SVM))

Nomad's Haven Application

Memphis, TN, USA

- Technologies Used:** Ruby on Rails, HTML, CSS, and JavaScript

Supply Chain Management Using Kafka

Memphis, TN, USA

- Technologies Used:** Apache Kafka, Maven, IntelliJ IDEA
