KEERTHAN K

Software Engineer

PROFESSIONAL SUMMARY

Java Full Stack Developer with over 9 years of experience delivering scalable, high-performance web applications and microservices using Java, Spring Boot, Angular, React, and Node.js. Adept at building and integrating REST and GraphQL APIs, implementing event-driven architectures with Kafka, and deploying containerized solutions on AWS and Kubernetes. Skilled in CI/CD automation with Jenkins, Bitbucket, and GitHub Actions, ensuring consistent and secure releases. Proficient in cloud-native development, infrastructure optimization, and cross-functional collaboration to deliver business-driven technical solutions.

SKILLS

Java, Spring Boot, React, Angular, NodeJS, HTML, CSS, JavaScript, TypeScript, Bootstrap, jQuery, REST API, Microservices, Python, AWS, Azure, MongoDB, MySQL, PostgreSQL, Git, Jenkins, Maven, Gradle, JUnit, Hibernate, Agile.

EMPLOYMENT HISTORY

SOFTWARE ENGINEER

Jun 2022 - Present

VISA Inc

Austin, TX

- Dedicated Full Stack Java Developer at VISA Inc, focused on rapid learning and delivering high quality solutions through collaboration.
- Implement best coding practices and maintain punctuality in project timelines, contributing to the team's overall success and efficiency using **Agile** methodology.
- Developed and maintained dynamic web applications using **Angular** framework, enhancing user experience and performance.
- Implemented reusable components and services in **Angular** to streamline development and reduce code redundancy.
- Designed responsive web pages using **HTML5 and CSS3**, ensuring cross-browser compatibility and adherence to web standards.
- Leveraged **TypeScript** to build scalable and maintainable applications, improving code quality through strong typing and object-oriented programming concepts.
- Developed **RESTful APIs** using **Node.js** to facilitate communication between front-end and backend services, optimizing data retrieval and manipulation.
- Utilized **NGRX** for state management in Angular applications, implementing Redux principles to manage application state efficiently.
- Designed and maintained **NGRX** reducers, actions, and effects to handle complex state transitions and side effects.
- Implemented **lazy loading** and code splitting techniques in **Angular** applications to enhance performance.
- Collaborated with cross-functional teams in an Agile environment to deliver high-quality software solutions on time.

- Utilized debugging tools and techniques to troubleshoot and resolve issues in both front-end and back-end code.
- Designed and implemented **GraphQL APIs** using **Spring GraphQL**, enabling flexible query execution for deployment artifacts and system logs with fine-grained field selection.
- Integrated **GraphQL resolvers** with backend services to expose deployment metrics, secured via **JWT-based role checks** and rate limiting, improving access control and API efficiency.
- Built asynchronous execution modules using **Java Spring Boot**, enabling long-running **GitOps** operations to run in detached mode, improving user responsiveness.
- Developed reactive services using **Java 11**, **Java 17**, and **Spring Web Flux**, supporting real-time interactions with reduced memory footprint.
- Leveraged **Spring Boot Actuator** to expose system health metrics, enabling proactive monitoring across services.
- Integrated **Resilience4j** and **Spring Cloud Circuit Breaker** for API fault tolerance, ensuring consistent performance under load.
- Deployed backend logic for core microservices using **Spring Boot**, exposing **REST APIs** to manage containerized applications.
- Created unit tests using **JUnit** to validate API endpoints and business logic in backend microservices, ensuring reliability during real-time deployment operations.
- Created detailed defects and bugs to streamline development efforts in an **Agile environment**.
- Used **Postman** to test **RESTFUL** web service endpoints and to perform GET, POST, UPDATE, and DELETE operations.
- Used **Splunk** for monitoring, searching, analyzing the data in the real time projects.
- Automated **CI/CD pipelines** in Bitbucket to deploy workflows efficiently on different environments.
- Integrated **Kafka** event producers in deployment workflows to publish system state changes, enabling asynchronous log processing and downstream analytics.
- Orchestrated container deployments on **Visa Cloud platform** with **Kubernetes** manifests and Helm charts, ensuring high availability and rapid rollback during production incidents.

Tech Stack:

Java 17, Spring Boot, Node.js, Angular, TypeScript, HTML5, CSS3, NGRX, Maven, Tomcat 10, Postman, Bitbucket, Splunk, REST API, Microservices, Docker.

SOFTWARE ENGINEER

Apr 2021 - Jun 2022

SAP

Newton Square, PA

- Involved in the development using **Agile** development to gather and analyze the requirements of the application.
- Designed front-end pages using **React**, **JavaScript**, **jQuery**, **NodeJS** for interactive response between the browser functionality, and **AJAX** to build responsive dynamic pages.
- Developed routing components in the application using React-route module for various component and views.
- Worked on **React JS and React views**, rendering components that contain other components called custom **HTML** tags.
- Created single page application to load multiple views using route services to make dynamic with **React** and **Node JS**.
- Worked on **React** to build high-quality, reusable, and scalable components and front-end solution.

- Experience with Spring Boot to create a **REST APIs** to connect to the database where we can get data from User Interface and pass the information to another **REST APIs**.
- Experience with **Core Java** technologies in Multi-Threading, Exceptional Handling to get various servers running in parallel.
- Have a good knowledge in the algorithms where we used and implemented the business logic using Data Structures.
- Developed **Spring Bean** for implementing Business logic and configure beans to manage bean lifecycle using annotations.
- Implemented application using **Spring Boot** and handled the authorization, authentication by using Spring Security.
- Implemented **MySQL** to store the data in the database and retrieve the data and give it to the required software and they process the information.
- Experienced **Splunk** in the real time data to search repository from which we can generate graphs, reports where it is easy to represent the data to the client.
- Involved in test cases using the framework **Junit** and fix the bugs or issues identified during testing process.
- Microservices have been built using **Spring boot, Spring security** to deploy in **AWS** cloud.
- Configured **Kafka** consumers for real-time procurement event ingestion, improving service responsiveness and reducing batch processing delays.
- Deployed **REST** and **GraphQL** endpoints to **AWS API Gateway**, enhancing API scalability and enabling secure, role-based access from external systems.
- Designed and integrated **AWS SQS** and **SNS** services to enable asynchronous, event-driven communication between microservices and external systems, improving system scalability and fault tolerance.
- Implemented **AWS API Gateway** to securely expose **REST APIs** for internal and external consumers, enhancing API management and ensuring high availability and performance.
- Developed backend data integration scripts using **Python** to process event-driven data streams and automate workflows within the **AWS** cloud environment, reducing latency and improving operational efficiency.
- Utilized **Python** with **AWS Lambda** functions to orchestrate serverless data pipelines and enhance the scalability of real-time analytics services delivered to internal business users.
- Involved in **CI/CD** process using **GIT**, **Maven** build Create **Docker image** and deployment in **AWS** environment.

Tech Stack:

Java, Spring Boot, Spring Security, React, Node.js, MySQL, Docker, AWS Lambda, AWS EC2, AWS S3, AWS CloudFormation, AWS IAM, Python, Splunk, Git, Maven, REST API, Microservices.

FULL STACK DEVELOPER

PPL Corporation

Feb 2020 - Mar 2021

Allentown, PA

- Using **Agile** methodology and effectively took part in Scrum gatherings to deliver quality deliverable time.
- Designed and developed a responsive UI using **Angular, NodeJS** and **REST** services by including tests.
- Involved in multi-tiered **J2EE** design utilizing **Spring Inversion of Control (IOC)**, **AOP**, and **Hibernate**.
- Implemented **RESTFUL** services with **JAX-RS** using **Spring Boot** and **Microservices Architecture**.

- Developed a scalable backend using **Java Spring Boot** and **Hibernate frameworks**.
- Developed Microservices architecture using **Spring Boot** based services to interact with multiple REST APIs and **Apache Kafka** as message intermediary.
- Developed **Microservices** with **Spring Eureka** to get API for entire cluster.
- Developed **Python** scripts using **Requests** and built-in **logging** to automate API testing, log parsing, and operational reporting for Kafka-based microservices.
- Implemented lightweight backend utilities in **Python** using **pandas** and **Pytest** to support validation, monitoring, and automation across **REST APIs** and microservice workflows.
- Using Microservices in a cluster we can have a load balanced and exposed through one API gateway.
- Involved in performing **JUnit** and **Integration testing (Junit)**.
- Used **Mockito** for creating Mock objects and run tests using Mockito Runner.
- Used **Hibernate** for **Object Relation Mapping (ORM)** purpose for persistence on to the database.
- Involved in implementing Queries to the backend **MongoDB** database using Http service to fetch **JSON** contract.
- Involved in **CI/CD** process using **GIT**, **Jenkins** job creation, **Maven** build, Create Docker image and deployed in **Azure** environment.
- Involved in setting up the **Azure repository**, merging code from the developed branch from the master branch and make it ready to deploy in the environment.
- Used **Postman** and **Soap UI** to test **RESTFUL** web service endpoints and to perform GET, POST, UPDATE, and DELETE data.
- Used **Splunk** for monitoring, searching, analyzing the data in the real time projects.
- Involved in tracking the issues and bugs in the project management using **JIRA**.

Tech Stack:

Java, Spring Boot, Spring Security, Angular, Node.js, Microservices, Kafka, Python, Requests, pandas, Pytest, Git, Jenkins, Azure DevOps, Docker, REST API, Splunk, Postman, JIRA.

JAVA DEVELOPER

Jul 2018 - Dec 2019

Go Mechanic

Bangalore, India

-
- Used Front End technologies like **HTML**, **CSS**, **JavaScript**, and **Angular** to develop the User Interface.
 - Used **Angular** as framework to create Single Page Application which can bind data to specific views and **synchronize** data with server.
 - Developed **Typescript** objects including Components, Providers, Services, Interface, and classes utilizing arrow function and optional types.
 - Worked on **Service Oriented Architecture (SOA)** to develop RESTFUL web services to create and consume services for different modules.
 - Implemented **Spring Boot** to make single page application for responsive services.
 - Implemented various features of **Spring framework** such as **Dependency**, **IOC**, **Annotation**, and **Spring Integration with Hibernate**.
 - Designed and developed a RESTFUL service interface using **Spring Boot** to customer event API.
 - Developed REST APIs using **Spring Boot** to communicate with the database to send data to another RESTFUL.
 - Used **Java Message Services** for reliable and synchronous exchange of important information like payment status report.

- Worked with **JAXB, SAXP and XML Schema** for exporting data into **XML** format and importing data from XML format to database in the web service request response data marshalling and unmarshalling process.
- Used **MQ (Message Queue)** calls to process the messages smoothly across multiple platforms.
- Experience in **MySQL and SQL Server** to store the data that is retrieved from the user.
- Implemented **MVC** framework-based Cloud Architecture on **AWS** platform and Cloud.

Tech Stack:

Java, Spring Boot, Hibernate, Angular, TypeScript, MySQL, SQL Server, REST API, MQ, AWS, JAXB, SOAP, JMS, Docker.

JAVA DEVELOPER

Jan 2017 - Jun 2018

Our Food

Hyderabad, India

-
- Involved in various phases of Software Development Life Cycle (SDLC) such as modeling, analysis, design, development, and testing.
 - Developed the User Interface using **JSP, HTML, CSS, jQuery, JavaScript, and Bootstrap**.
 - Developed various classes using **Core Java Multi-threading** programming and collection classes.
 - Developed Hibernate entities and perform Object related mappings and wrote criteria queries for retrieval of data.
 - Involved in **Spring MVC** to develop the web application where we followed the sequence of the design pattern where it implements the Spring framework like **IOC, Dependency**.
 - Involved in setting up the connection pooling and used **JMS** for Asynchronous messages.
 - Deployed web, presentation, and business components on **WebLogic** Application Server.
 - Used **Maven** tool to build the project and integrate with Jenkins.
 - Involved in production bug fixes, analyzing, and improving the performance of application.
 - Used **log4J** for logging and debugging the application.
 - Involved in writing **Oracle SQL** in Stored Procedures, Functions, Triggers, Sequences, Indexes and Views.
 - Used **Eclipse** as IDE to develop application and **SVN** as a source control for code changes.

Tech Stack:

Java, Spring MVC, Hibernate, JSP, HTML, CSS, JavaScript, jQuery, Bootstrap, Oracle SQL, JMS, WebLogic, Maven, Jenkins, SVN, REST API.

JAVA DEVELOPER

Jun 2015 - Dec 2016

Mappr

Hyderabad, India

-
- Involved in **Waterfall** methodology and delivering the accepted work in each sprint.
 - Designed and developed User Interface using **HTML, CSS, Bootstrap, JavaScript, jQuery** in a responsive grid layout.
 - Developed Web Services using **XML, SOAP, and RESTFUL** web services.
 - Used **SOAP protocol, JAX-WS and Apache CXF** in development of web services.
 - Used various **Core Java** concepts such as Multi-Threading, Exception Handling, and various collection of frame works.
 - Involved in the **Spring MVC** to handle the user requests, Load balancing, Service-to-service calls.

- Automated the build process by using **ANT** build tool and deployed on the **Tomcat** Server.
- Designed, developed, and maintained the data using Hibernate with the help of Spring Application Framework.
- Developed packages to validate data from **Flat Files** and insert to various tables in **MySQL Database**.
- By using Hibernate to store the data into **MySQL** database and written **HQL** to access the data from the database.

Tech Stack:

Java, Spring MVC, Hibernate, HTML, CSS, JavaScript, jQuery, Bootstrap, SOAP, JAX-WS, Apache CXF, MySQL, ANT, Tomcat, REST API.
