

# Keerthana Reddy

Dallas, TX | 9407832547 | [keerthanareddypanyala@gmail.com](mailto:keerthanareddypanyala@gmail.com) | [linkedin.com/in/keerthanareddyp](https://www.linkedin.com/in/keerthanareddyp) | [github.com/Keerthana-Reddy-Panyala](https://github.com/Keerthana-Reddy-Panyala)

## SUMMARY

Full-stack-leaning Software Engineer (~5 yrs) across fintech and data platforms. Shipped React/TypeScript front ends and built Java/Spring Boot microservices plus Spark/Databricks pipelines. Known for curiosity-driven learning, bias to action, and owning ambiguous work from problem to shipped result.

## SKILLS

**Languages:** Java, TypeScript/JavaScript, SQL, Python

**Backend:** Spring Boot, REST APIs, Microservices, FastAPI (projects)

**Data & Pipelines:** Apache Spark, Databricks, (project) Kafka, Batch/ETL, Data Validation, Idempotency

**DB & Storage:** PostgreSQL (schema/index tuning, query optimization)

**Frontend:** React, Redux Toolkit, GraphQL/REST integration, Jest/RTL, Webpack, Accessibility (WCAG 2.1), Core Web Vitals

**DevOps/Delivery:** Docker, GitHub Actions, Jenkins, Monitoring/Alerting, Feature flags, Blue/Green & staged rollouts

**Practices:** CI/CD, Code reviews, Design systems, Performance engineering, Incident response/on-call hygiene

## EDUCATION

**Master of Science - University of North Texas**

**Aug 2023 – May 2025**

*Denton, TX*

- Focus: **Systems, data engineering, and applied ML.**
- Production-style pipeline using **Spark, Databricks, and FastAPI**, with a **React** front end; emphasized testability, containerization, and CI on GitHub Actions.
- Notable projects:
  - **Microservices data pipeline:** Spring Boot + Kafka + Postgres, containerized with Docker, CI via GitHub Actions.
  - **Frontend:** Spotify-style React UI clone with modular design system, authentication, and API integration.

## PROFESSIONAL EXPERIENCE

**Software Engineer – J.P. Morgan Chase**

**Jan 2022 - Apr 2023**

*Hyderabad, India*

- Built and maintained **Java / Spring Boot** microservices for internal data workflows; improved reliability and on-call signal by tightening health checks and alert thresholds (validated via incident logs and dashboards).
- Designed **Spark / Databricks** batch jobs to aggregate and validate multi-TB datasets; reduced reprocessing and data-quality issues with schema validation and idempotent writes.
- Containerized services with **Docker** and set up **CI/CD** in **GitHub Actions / Jenkins** with automated tests and staged rollouts, shortening feedback loops and making rollbacks predictable.
- Tuned **PostgreSQL** schemas and indexes; eliminated slow queries and timeouts observed in APM traces; introduced safer read/write patterns where appropriate.  
**Tech:** Java, Spring Boot, Spark, Databricks, SQL/PostgreSQL, Docker, GitHub Actions, Jenkins, REST, Microservices, Monitoring/Alerting.

**Software Engineer (Frontend) – Western Union**

**Jul 2019 - Dec 2021**

*Hyderabad, India*

- Shipped customer-facing **React + TypeScript** features for payments and onboarding; strengthened form resilience with async validation, clear error states, and retry logic (improvements reflected in drop-off analytics).
  - Built and maintained a shared **component library** with WCAG 2.1 AA patterns, reducing UI inconsistencies and review cycles across multiple squads.
  - Introduced performance budgets and **code-splitting** to lower initial bundle size; improved Core Web Vitals (LCP/CLS) tracked in perf dashboards.
  - Collaborated with backend teams on **REST/GraphQL** integrations; added client-side caching and backoff/retry to stabilize transaction flows during partial outages.
- Tech:** React, TypeScript/JavaScript, Redux/RTK, GraphQL/REST, Jest/RTL, Webpack, Accessibility (a11y), Performance.

## Frontend Developer Intern - OpenText

May 2018 - Jul 2019

Hyderabad, India

- Delivered enterprise **React** dashboards and admin flows; simplified multi-step tasks through clearer IA, validation, and empty-state design.
  - Created reusable form and table patterns that sped up feature delivery and reduced design drift; partnered closely with Design and QA for faster sign-offs.
  - Wrote integration tests and visual regression checks to prevent UI breakage across releases.
- Tech:** React, TypeScript/JavaScript, Sass/CSS Modules, REST APIs, Jest, Jira/Agile.

## PROJECTS

---

### Palantir Foundry CRM Data Pipeline

*Independent Project | 2025*

- Designed and deployed a customer-company matching pipeline in Palantir Foundry using Python and SQL.
- Implemented data ingestion, transformation, and export workflows across multi-node systems.
- Debugged and refined multi-step logic to align input datasets with real-time user selections.

**Technologies used:** Python, SQL, Palantir Foundry, Data Pipelines

### Spotify UI Clone

*Frontend Project | 2025*

- Built a responsive and interactive Spotify UI clone using React.js and styled-components.
- Integrated playback controls and state management with React hooks.

**Technologies used:** React.js, JavaScript, CSS, HTML

### Bookstore API

*Backend API Project | 2025*

- Developed RESTful CRUD API using Node.js and Express with MongoDB integration.
- Implemented JWT-based authentication and protected routes.

**Technologies used:** Node.js, Express.js, MongoDB, JWT, Postman
