## SUMMARY

Full Stack Engineer with 3+ years of experience building scalable web and mobile apps. Skilled in optimizing APIs, architecting real time systems, and deploying serverless infrastructure on AWS. Hands on with CI/CD, Redis caching, and event driven microservices.

## SKILLS

**Programming Languages:** Python, JavaScript, TypeScript Swift, Java, Solidity, SQL

**Frontend:** React, React Native, Next.js, Redux, jQuery, Bootstrap, Tailwind CSS, HTML, CSS

**Backend:** Django, Node.js, Express.js, REST APIs

**DevOps & Cloud:** AWS, GitHub Actions (CI/CD), Terraform, GCP, Docker

**Tools & Frameworks:** Git, Redis, Google Dialogflow, RabbitMQ, Cypress, Jest, pytest, SonarQube, Athena, Jira, MobX, Ignite

**Databases:** MongoDB, MySQL, PostgreSQL, Firebase, NoSQL, DynamoDB

## WORK EXPERIENCE

### Full Stack Developer | Unthink AI (Previously Yfret Inc)

Oct 2020 - Dec 2022

(Django, Python, REST APIs, React, Google Dialogflow, Websockets, MongoDB, Redis, Git)

- Improved API response times by 40% by optimizing **Django REST APIs** with asynchronous processing, efficient query handling, and caching strategies, enhancing system scalability.
- Reduced frontend load times by 30% by optimizing **React** state management, implementing code splitting, and virtualizing lists, improving rendering efficiency and user experience on high traffic pages.
- Engineered an event driven architecture using **RabbitMQ** to synchronize inventory management and recommendation engines, while also handling real time notifications for product updates and promotions across multiple user channels.
- Decreased chat latency from 800ms to under 300ms, increasing engagement by 35% by developing a **WebSocket** driven real time chat system and optimizing **MongoDB** queries, indexing, and **Redis** caching for faster data retrieval.

### Software Engineer Intern | TheBoard

Jan 2024 – Dec 2024

(React Native, TypeScript, Python, AWS Lambda, AWS CloudWatch, PostgreSQL, Git)

- Increased student engagement by 40% by revamping the **React Native** app UI/UX, enhancing navigation, and rendering performance while leveraging **TypeScript** for type safety and scalable component architecture.
- Decreased response times by 25% and scaled infrastructure to 100+ concurrent API calls by developing **AWS Lambda** based **serverless APIs**, ensuring cost efficient and high-performance backend operations.
- Improved system performance by 30% for 100+ active users by optimizing **PostgreSQL** queries, indexing strategies, and caching mechanisms, enhancing database efficiency and API responsiveness.
- Implemented a comprehensive testing suite with unit, integration, and **end-to-end tests** using **Jest**, **React Native Testing Library**, and **Detox**, while integrating **AWS CloudWatch** for real time logging and monitoring in production.

### Teaching Assistant | Northeastern University

Aug 2024 – Dec 2024

(Python, REST APIs, CNC Programming, 3D Printing)

- Mentored over 60 students in weekly lab sessions on **Python** programming, **RESTful API** development, and automation.
- Led **10+** hands on sessions training students to program CNC machines and operate 3D printers via web connected platforms, achieving a 95% lab task completion rate across 4 practical workshops.

## PROJECTS

[Dollar Dashboard](#) [React, NodeJS, ExpressJS, MongoDB, Git]

- Built a financial management app to help users track expenses and budgets, boosting engagement and budgeting efficiency through **React based dynamic visualizations** and **optimized Node.js/Express APIs**, reducing response times by **50%**.
- Designed an efficient **MongoDB** schema to handle transactional data while ensuring **scalability and fast queries**. Implemented **Git** for **version control**, enabling seamless collaboration, rollback capabilities, and structured development workflows.

[Resume API](#) [AWS Lambda, DynamoDB, API Gateway, Terraform, GitHub Actions(CI/CD)]

- Built a fully serverless Resume API using **AWS Lambda**, **DynamoDB**, and **API Gateway**, enabling scalable, cost-efficient CRUD operations while automating deployments with **Terraform** and **GitHub Actions(CI/CD)**, reducing deployment time by 30%.
- Optimized system performance with a **Redis** caching layer, achieving **60%** faster read operations and significantly reducing database load during peak traffic.

## EDUCATION

Northeastern University, Boston, MA

Jan 2023 – Dec 2024

Master of Science in Software Engineering Systems

**Relevant Coursework:** DSA(Python), OOD(Java), Web Design, DBMS, iOS App Development, Data Science
