

Khaja Mohiddin Shaik

Full Stack Java Developer

☎ +1(469)-612-2603 | ✉ mohiddin.s@mailjobtech.com |  [LinkedIn](#)

SUMMARY

- Full Stack Java Developer with 3 years of experience creating enterprise-grade applications using Java17, 11, Spring Boot, React.js, and Angular with cloud deployment expertise.
- Expert in microservices architecture and performance optimization through advanced Java programming, database integration, and automated testing frameworks achieving measurable efficiency improvements.
- Proficient in delivering scalable solutions using modern development practices, CI/CD automation, and cross-platform technologies while maintaining high code quality standards.

SKILLS

Methodologies: SDLC, Agile, Waterfall

Programming Languages & Core Technologies: Python, Java, JavaScript, HTML5, CSS3, SQL, TypeScript, REST API, GraphQL

Frontend Technologies: React, Angular, Vue.js, jQuery, Bootstrap, Tailwind CSS, Webpack

Backend Technologies: Node.js, Apache, Tomcat

Java Frameworks & Build Tools: Spring Boot, Spring MVC, Spring Security, Hibernate, Maven, Gradle, Django, Flask, FastAPI

Databases & Data Management: PostgreSQL, MySQL, MongoDB, Redis, Elasticsearch, Database Design

Testing Frameworks: Pytest, JUnit, Mockito, Jest, Unit Testing, Test-Driven Development (TDD)

Cloud & DevOps: AWS, Azure, Docker, Kubernetes, CI/CD, Jenkins, Terraform

Development Tools: VS Code, PyCharm, IntelliJ IDEA, Eclipse, Postman, Swagger, JIRA

Version Control: Git, GitHub, GitLab

Soft Skills: Critical thinking, Problem-solving, Attention to detail, Communication Skills, Stakeholder Management

EDUCATION

Master of Science in Information Systems

University of Texas at Arlington

December 2024

Bachelor of Technology

PRIST University, India

December 2020

WORK EXPERIENCE

Full Stack Java Developer | Humana, Texas

August 2024 - Current

- Developed and maintained **Java 17 microservices** with **Spring Boot** and **AWS RDS** for healthcare claims processing, designing system architecture and robust validation rules that reduced claim processing errors while working in an **Agile Scrum** environment.
- Built secure **RESTful APIs** using **Spring Security** with frontend-backend integration for multiple insurance provider networks, ensuring HIPAA compliance and regulatory standards throughout the **SDLC** while collaborating with cross-functional teams.
- Implemented asynchronous message processing using **Apache Kafka** with RabbitMQ integration for real-time member notifications and claims status updates, developed event-driven architecture patterns, improving system scalability.
- Optimized application performance using **Java Streams** and **Collections** framework, implemented multi-threading for concurrent member data processing, reducing memory usage by 30% and improving response efficiency for healthcare operations.
- Designed responsive healthcare analytics dashboards using **React.js** and **Bootstrap** with API integration, enabling care management teams to quickly identify member risk profiles and resolve coverage issues, improving case resolution time.
- Implemented **CI/CD pipelines** using **Jenkins**, **GitHub** for version control, and **AWS** for cloud deployment, performing code reviews and writing **JUnit** tests with performance optimization that reduced deployment time for healthcare applications.
- Troubleshoot critical production issues within SLA timeframes using **IntelliJ** debugging tools and optimized **AWS RDS** and **MySQL** database schema design for member data management, improving system throughput.

Full Stack Java Developer | Vivma Software Inc, India

December 2020 – December 2022

- Built secure user access systems leveraging **JWT tokens** with OAuth2 and **Spring Security REST APIs** through **Spring Boot**, utilized **Redis** caching alongside **TypeScript** validation mechanisms, delivering 70% decrease in authentication system failures.
- Created project management interface utilizing **MongoDB** storage and **Angular** with **Material-UI** components, incorporated **Azure** Blob Storage with WebSocket live communication features, significantly enhancing operational workflow efficiency.
- Eliminated browser incompatibility problems through responsive design implementation using **Bootstrap** and **Tailwind CSS** within **Angular** framework, worked alongside design teams utilizing AJAX integration, successfully achieving 98% device compatibility.
- Established automated **CI/CD deployment** pipelines using **Jenkins** and **GitHub** Actions with **Docker** containerization for **microservices**, integrated comprehensive **Cypress** testing frameworks, achieving consistent automated deployment success rates.
- Configure automation workflows through **Docker** containerized **microservices** using **Jenkins** and **GitHub** Actions, embedded **Cypress** testing automation suites within **CI/CD deployment** processes, ensuring reliable continuous integration delivery.
- Constructed database integration layer through **MySQL database** connectivity using **Hibernate JPA** architecture, implemented thorough testing protocols with **JUnit** and **TestNG** frameworks, achieved 95% test coverage with reliable transaction processing.
- Modernized system performance through **Azure Cloud Services** migration implementing **Java Spring** microservices architecture, deployed advanced caching solutions resulting in 60% improvement in API response time efficiency.
