

KHUSHMEET ARORA

Irvine, CA 92612 (Open to Relocation) | (949) 739-9800 | khushmeetarora@gmail.com | [LinkedIn](#)

SUMMARY

Master's student in Business Analytics at UC Irvine with 2+ years of experience in analytics, data, and software development across healthcare, finance, and tech. Skilled in Python, SQL, Power BI, and machine learning, with a strong focus on turning data into actionable insights. Experienced in building dashboards, predictive models, and optimization solutions that drive smarter business decisions.

EDUCATION

University of California, Irvine, Irvine, CA

August 2025

Master of Science in **Business Analytics**

- Beta Gamma Sigma Honors Society | **Dean's Scholar Recipient** | Teaching Assistant - Introduction to Management Information Systems
- Courses:** Predictive Analytics, Marketing Analytics, Statistics for Data Science, Machine Learning, Deep Learning, Big Data, NLP

College of Engineering, Pune, India

May 2022

- Bachelor of Technology in **Computer Engineering** with a Minor in Mathematics (Finance)
-

WORK EXPERIENCE

EDWARDS LIFESCIENCES, Irvine, CA

January 2025 - March 2025

Student Data Analyst, Quality Data Analytics

- Conducted exploratory data analysis (EDA), data cleaning, and processing using **Python** to standardize 10K+ Non-conformance reports (NCR) and Complaint Product Evaluation codes.
- Built **Power BI** dashboards surfacing early quality trends, accelerating early defect detection.
- Applied **NLP** techniques (TF-IDF, SBERT) to match defect codes with product evaluations, uncovering key failure patterns and improving traceability.
- Served as the communication liaison between the team and company, ensuring seamless **collaboration** and alignment on project goals.

WELLS FARGO, Hyderabad, India

July 2022 - June 2024

Software Engineer, Capital Markets Technology (CMT)

- Diagnosed and Resolved 2,000+ critical trading application issues through **Jira** triage and **Java debugging**, maintaining system uptime and minimizing revenue-impacting downtime.
- Led migration from Java MQ to **Apache Kafka**, cutting message delivery latency by 30% and increasing system reliability for trading operations.
- Built executive-facing **Power BI** dashboards with **DAX**, visualizing trading revenues and enabling faster financial decision-making.
- Automated UI testing with **Selenium**, reducing manual testing effort by 40% and shortening product release cycles by two weeks.
- Increased unit test coverage from 30% to 60%+ across 10+ Java applications by developing robust **JUnit** test cases, strengthening code reliability.
- Presented CMT product offerings (e.g., M&A solutions) to 50+ stakeholders at Markets Square event, highlighting **communication** skills and domain expertise.

NUANCE COMMUNICATIONS, Pune, India

June 2021 - August 2021

Software Developer Intern, CoreTech Security And Biometrics

- Enhanced data security for internal RPC systems by implementing RSA encryption, reducing vulnerability exposure by 40% across microservices.
 - Improved microservice communication speed by 25% by integrating gRPC framework, lowering RPC call latency and optimizing system scalability.
-

PROJECTS

Credit Risk Prediction System

- Developed a credit risk classifier using Random Forest, XG Boost, and Logistic Regression models; achieved 88% model accuracy.
- Applied a novel weighted feature selection method combining ANOVA, Chi-Square, and Pearson correlation to optimize model inputs.
- Created visualizations in Python (Matplotlib, Seaborn) to communicate risk factors, supporting more informed loan decisions.

Personalized Financial Advisor Chatbot

- Built a Retrieval-Augmented Generation (RAG) chatbot using FAISS, Hugging Face Transformers, and Streamlit to deliver real-time financial advice based on curated knowledge base.
- Integrated semantic search, custom prompt engineering, and controlled text generation via flan-t5-base to generate detailed, multi-sentence responses.

Customer Segmentation and Behavior Analysis for Walmart

- Conducted EDA on 2,000+ customer records and segmented users using K-Means and GMM, achieving a silhouette score of 0.3385.
- Uncovered customer behavioral patterns to support targeted marketing and loyalty strategy development.
- Visualized segmentation insights using Python (matplotlib, seaborn), enhancing executive reporting and cross-functional understanding.

The Job Sweeper: Detecting Fake Job Postings

- Analyzed 18K+ listings from a Kaggle dataset, applying formal hypothesis testing to derive insights that inform safer job search practices
 - Conducted Z-tests on job ad features (e.g., logo, telecommuting, screening questions) to identify statistically significant fraud indicators.
-

SKILLS

- Languages & Libraries:** Python (Pandas, NumPy, Scikit-learn, Tensorflow, PyTorch), SQL (MySQL), R, Java
- Data Visualization & Reporting:** Power BI, Tableau, Excel, DAX, Looker
- Data Handling & Analysis:** EDA, Feature Engineering, Data Cleaning, Data Wrangling, Jupyter, Colab
- Machine Learning:** Regression, Classification, Clustering, A/B Testing, Predictive Modeling
- Cloud, Tools & Methodologies:** Microsoft Azure (AZ-900 certified), Git, Jira, Apache Kafka, Agile, Scrum, SDLC, CI/CD, Jenkins, Google Sheets, SPSS, Microsoft Office, Alteryx Designer, ArcGIS Pro, Docker
