

Kiran Kumar Reddy Lingala

Data Scientist

San Jose, CA | +1 (610)-202-5449 | kiranpennstate@gmail.com | LinkedIn

SUMMARY

- Data Scientist with over **4** years of experience in data extraction, modeling, wrangling, statistical analysis, data mining, machine learning, and data visualization.
- Experienced in both **Waterfall** and **Agile** environments, utilizing project management tools like **Jira**.
- Proficient in machine learning algorithms including **regression analysis, clustering, classification, decision trees, neural networks**, and **natural language processing (NLP)** for predictive modeling and pattern recognition.
- Highly Skilled in data science packages such as **NumPy, Pandas, Matplotlib, ggplot2, Scikit-Learn, PySpark, PyTorch, Keras, TensorFlow**, and **SciPy**, enabling efficient data manipulation, analysis, modelling, and visualization.
- Engineered and deployed **Large Language Models (LLMs)** on **multi-GPU** infrastructure, leveraging **fine-tuning, optimization**, and **distributed computing** for scalable AI solutions.
- Expert in transforming data into impactful visualizations with **Tableau** and **Power BI**, facilitating clear communication to both technical and non-technical stakeholders.
- Well-versed database management systems like **MySQL** and **MongoDB**, ensuring effective data storage and management.

SKILLS

Methodologies: SDLC, Agile, and Waterfall.

Language: Python, R, R Studio, SQL, and SAS.

Machine Learning: Bayesian Networks Inference, Linear and Non-Linear Regression Analysis, Decision Trees, Random Forests, Support Vector Machine, Neural Networks, Sentiment Analysis, K-Means Clustering, KNN, Naive Bayes, Natural Language Processing (NLP), LLM, XGBoost, LSTM, Transformers and Gen AI.

Packages: NumPy, Pandas, Matplotlib, SciPy, ggplot2, Scikit-Learn, PyTorch, TensorFlow, Keras, and PySpark.

Visualization Tools & IDEs: Tableau, Power BI, Microsoft Excel, Visual Studio Code, PyCharm, Jupyter Notebook, AWS SageMaker.

Cloud Technologies: AWS S3, AWS EMR, AWS Glue, AWS Lambda, Azure Data Factory, Databricks, and Snowflake.

Database: MySQL, SQL Server, Oracle, MongoDB, AWS Redshift, Azure Cosmos, and BigQuery.

Other skills: Critical Thinking, Effective Communication, Problem-solving, Decision-making and Presentation Skills.

Operating System: Windows, Linux.

EXPERIENCE

Huntington National Bank, USA | Data Scientist

Aug 2023 - Current

- Worked in **Agile** environments to deliver iterative **data science** solutions, ensuring adaptability to **evolving** project requirements.
- Analyzed both **structured** and **unstructured** datasets to extract **patterns**, visualizing insights with interactive charts using **ggplot2**.
- Implemented ML models such as **Naïve Bayes, Logistic Regression, Random Forest**, and **XGBoost** to predict loan defaults.
- Applied **Support Vector Machine (SVM)** algorithms for **classification** and **regression** tasks, optimizing **hyperplanes** to accurately separate data points into distinct classes or predict continuous financial outcomes, enhancing decision-making processes.
- Designed and deployed recommender systems using collaborative filtering techniques to suggest relevant financial products to customers, with implementation on **AWS EMR** for scalable performance.
- Leveraged **NLP** techniques to analyze feedback, enhancing customer satisfaction and driving improvements in service quality.
- Developed Tableau dashboard to monitor both mobile and web applications performance, increasing response effectiveness by 23% and ensuring smoother operations.
- Employed **BERT** and **RoBERTa** NLP models to enhance **Document** and **PDF AI** capabilities, resulting in more accurate data extraction and improved document processing efficiency.

Kaar Technologies, India | Data Scientist

May 2019 - July 2022

- Conducted comprehensive testing and validation of machine learning models and solutions prior to deployment on **AWS Cloud**, employing structured **Waterfall** methodologies to ensure robustness and reliability.
- Integrated **Databricks** solutions into existing data pipelines through collaboration with **cross-functional** teams, enhancing data processing capabilities.
- Utilized **Python** packages such as **NumPy, Pandas, Matplotlib, SciPy, TensorFlow, Scikit-learn**, and **Seaborn** for in-depth analysis of **user** and **product behavior**, researching features to drive data-informed decisions.
- Developed a **REST API Python ETL** pipeline for efficient data extraction, transformation, and loading, and created a user-friendly web interface to streamline data management processes.
- Designed and deployed machine learning models that achieved an average accuracy improvement of **15%** over previous models, leading to a **25%** reduction in forecasting errors and enhancing predictive performance.
- Integrated **Power BI** with **Excel** and other data sources to generate dynamic reports that update automatically, providing real-time insights to support business decisions.
- Leveraged **AWS EC2** instances to execute data processing tasks, model training, and inference, utilizing scalable computing resources to handle varying workloads effectively.
- Collaborated with database administrators to optimize **MySQL** database performance, including tuning query execution plans to improve data retrieval and processing speed.

EDUCATION

Masters in Computational Science | The Pennsylvania State University, University Park, PA, USA

Bachelors in Computer Science | Madanapalle Institute of Technology & Science, Madanapalle, AP, India
