

Professional Summary

Experienced Data Analyst with 3+ years of turning complex data into actionable insights using Machine Learning techniques, Python, SQL, and AWS. Skilled in building automated ETL pipelines, predictive models, and BI dashboards to boost performance and efficiency. Proficient in Data Structures and Algorithms, enabling efficient data processing and scalable solutions. Adept at communicating complex technical insights into clear, actionable strategies for all stakeholders.

Technical Skills

- Languages:** Python (Pandas, Scikit-learn, Matplotlib), R, SQL, PL/SQL, Data Structures & Algorithms.
- AI/ML & Analytics:** Predictive Modeling, Regression, Classification, A/B Testing, Credit Risk Modeling, Time-Series Forecasting.
- Data Visualization & Reporting:** Power BI, Tableau, QlikView, Excel (including VBA).
- Data Modeling & ETL:** Data Pipeline Architecture, AWS Glue, Snowflake, Redshift, Apache Airflow.
- Cloud:** AWS (Glue, S3, Redshift, Step Functions), Azure, GCP.
- Project Management:** Agile/Scrum, JIRA, Confluence, Git, Visual Studio Code.

Certifications

- Microsoft Certified: Power BI Data Analyst Associate
- AWS Cloud Quest: Cloud Practitioner
- Tata Group - Data Visualisation: Empowering Business with Effective Insights Job Simulation
- Accenture North America - Data Analytics and Visualization Job Simulation

Work Experience

Crown Castle - Houston, TX	Jan 2025 – Present
Role: Data Analyst	
- Designed and implemented end-to-end ETL pipelines using AWS Glue and Apache Airflow to integrate and harmonize multi-source datasets (GIS, CRM), achieving a 40% reduction in manual data handling and significantly improving reporting accuracy. - Developed and deployed interactive Tableau and Qlik Sense dashboards to monitor lease KPIs and project timelines, providing real-time executive visibility and accelerating data-driven decision-making. - Built Developed and deployed advanced SQL- and Python-based analytical models for customer churn forecasting and network performance anomaly detection, sourcing and integrating large datasets from CRM systems, network performance logs, and billing records via ETL workflows. These insights enabled targeted retention campaigns that reduced churn by 15% and improved network uptime by 8%. - Created and delivered geospatial analytics solutions using Python and Tableau, leveraging GIS mapping data and asset management platforms to optimize fiber route planning and tower placement. This accelerated network deployment planning by 20%, reduced field survey time, and improved site selection accuracy through data-driven decision-making.	
Infosys - Hyderabad, India	Dec 2021 – Jul 2023
Role: Data Analyst	
- Extracted and integrated financial, operational, and market data from ERP systems, general ledger databases, and external APIs using SQL and Python, ensuring data integrity and completeness. - Conducted comprehensive financial performance analysis by integrating internal ERP data with external market indicators, delivering actionable insights that guided strategic investment decisions and improved forecast accuracy by 15% - Performed data reconciliation, standardization, and financial ratio calculations by aligning fiscal periods, managing multi-currency datasets, and applying accounting best practices, leveraging advanced Excel and Python (Pandas). - Developed and maintained advanced financial models (DCF, three-statement forecasting, scenario simulations) and designed interactive Power BI dashboards and conducted A/B testing to evaluate strategic initiatives and quantify business impact.	
Celigo India Pvt Ltd-Hyderabad, India	May 2021 – Dec 2021
Role: Data Analyst	
- Built automated data integration pipelines for SaaS clients using Python and SQL, improving interoperability between third-party apps and core systems, which reduced data sync time by 30%. - Developed predictive models and client-facing Power BI dashboards to forecast KPIs and monitor integration health, enhancing decision-making and increasing customer satisfaction.	

Projects

- Student Performance Analysis System** - Developed using Python and Power BI. Applied a Linear Regression model to predict GPA based on attendance and test scores. Visualized insights and at-risk students through interactive dashboards for academic intervention.
- Weather Data Analytics** - Developed Python, Pandas, and OpenWeatherMap API to collect and analyze real-time weather data across cities. Visualized temperature and humidity trends using Matplotlib and exported insights to Power BI for interactive reporting.

Education

Indiana Institute of Technology , <i>Master of Information Systems.</i>	July 2023 – Dec 2024, Indiana, USA
Vignan Institute of Technology , <i>Bachelor of Electrical and Electronics.</i>	Jul 2017 – May 2021, Hyderabad, India
