

Summary

Data Analyst with 3+ years of experience in financial, e-commerce, and enterprise domains. Skilled in Python, SQL, Tableau, Power BI, and cloud platforms (GCP, AWS). Proven track record of building scalable ETL pipelines, automating workflows to cut manual effort by 70%, and creating dashboards that improved reporting efficiency by 35%. Adept at statistical modeling, forecasting, and trend analysis to drive cost optimization and faster decision-making.

Technical Skills

- Programming & Scripting:** Python, SQL, VBA
- Data Analysis & Processing:** Pandas, NumPy, SciPy, Advanced Excel, Power Query, Data Cleaning, Data Transformation
- Databases & Data Management:** MySQL, PostgreSQL, Microsoft SQL Server
- Data Visualization & Business Intelligence:** Tableau, Power BI, AWS QuickSight, Excel Dashboards, Matplotlib, Seaborn, Waterfall
- Statistical & Analytical Techniques:** Cost-Benefit Analysis, PESTLE Analysis, Financial Forecasting, Variance Analysis, Trend Analysis
- Automation & Reporting:** Excel Macros, Automated Reporting Systems, Data Validation
- Development & Collaboration:** Git, Jupyter Notebook, Google Colab, Jira, Confluence, Agile Methodology
- Cloud Platforms & Deployment:** Google Cloud Platform (GCP), Google Drive API

Professional Experience

Data Analyst | Mindtree

Dec 2024 – Present

- Engineered Python- and SQL-based ETL pipelines processing 10M+ records weekly, improving data quality by 30% and enabling accurate, error-free reporting across business units.
- Designed and deployed 7 interactive dashboards in Power BI, Tableau, and AWS Quick Sight, providing executives with visibility into 20+ KPIs spanning financial performance, customer retention, and delivery efficiency.
- Conducted advanced trend, variance, cost-benefit, and forecasting analyses using Excel, generating insights that optimized budgets and reduced project costs by 12%.
- Optimized SQL queries to accelerate complex data retrieval, reducing query runtime by 70% and enabling faster ad-hoc reporting for cross-functional teams.
- Leveraged cloud platforms (AWS, GCP) for scalable data storage, reporting automation, and dashboard hosting with 99.9% uptime, while collaborating in Agile teams via Jira and Confluence to deliver scalable data models 25% faster.

Data Analyst | Meta System

Aug 2021 – Jul 2023

- Built SQL pipelines across PostgreSQL, MySQL, and MS SQL, processing 20M+ records monthly and cutting data preparation time by 40%, accelerating analytics delivery across global business units.
- Developed and deployed 10+ Tableau and Power BI dashboards, enabling executives to track 25+ KPIs, which improved reporting efficiency and decision-making speed by 35%.
- Automated 15 recurring reporting workflows using Python, Excel Macros, and VBA, eliminating 250+ manual analyst hours per quarter while enhancing accuracy in financial and operational reports.
- Performed variance, trend, and anomaly analyses on enterprise-wide datasets, identifying inefficiencies that generated \$1.2M in annual cost savings and streamlined cross-functional processes.
- Implemented forecasting models in Python increasing revenue forecast accuracy by 18%, enabling better resource planning and long-term business strategy.
- Consolidated data from CRM, ERP, and financial systems into a single reporting layer with 98% accuracy, ensuring reliable insights for finance, operations, and product teams.
- Partnered with stakeholders in Agile sprints (Jira, Confluence) to translate business requirements into scalable data models, accelerating project delivery timelines by 25%.

Projects

1. Big Data Analysis – NYC Taxi Data

Sep 2024 – Dec 2024

- Processed and analyzed 30M+ NYC Yellow Taxi trip records using Hadoop and MapReduce in AWS, identifying top 10 revenue-generating pickup zones and improving route efficiency insights by 22%.

2. Amazon Sales Forecasting

Jan 2024 – May 2024

- Developed a CNN-based predictive model in Python leveraging pricing, discount, and review metrics, boosting monthly sales forecast accuracy by 15% and enabling data-driven inventory planning.

3. Amazon Sales Association Analysis

Sep 2023 – Dec 2023

- Applied the algorithm on 50K+ transactions, uncovering 12+ high-value product pairings that informed cross-selling strategies and increased potential basket value by 18%.

Education

M.S in Computer Science , New Jersey Institute of Technology, USA	Sep 2023 – May 2025
B.E in Electronics and Communication , Gujarat Technological University	Sep 2017 – Oct 2021
