WORK EXPERIENCE

MANHATTAN ASSOCIATES

Atlanta, Georgia

Software Engineer Intern – Performance Engineer Team

May 2021 – August 2021

Monitored and ran performance tests on warehouse supply chain software to survey for defects and optimization opportunities. Prioritized critical fixes with corresponding teams

- Monitored 4-hour stress simulations at 10x client peak volumes to validate software availability and uptime
- Increased operational speed by 25% by identifying defects and areas for improvement for R&D teams
- Presented supply chain improvements impacting 1,200+ clients and millions of consumers to the EVP of Global R&D

Software Engineer Intern – Performance Engineer Team

May 2020 – August 2020

Automated ETL pipeline for data in GCP buckets, visualized the data using Pandas and Matplotlib libraries from Python, and distributed reports. Used Continuous Integration/Continuous Deployment (CI/CD) principles to optimize iterative Agile development

- Automated data pipeline and reporting for 900 data points and 30 visualizations saving over 40 hours manual review weekly using Python and Pandas library
- Enhanced supply chain metrics to optimize warehouse operations for processing 10,000 orders daily

Software Engineer Intern – Lane Management Team

May 2019-August 2019

Developed full stack Proof of Concept (PoC) using open-source tools and Angular. Presented findings to R&D Leadership

- Utilized census data to design a user interface using Angular 8 that maps truck carrier operating locations across the US to reduce supplier shipping costs by up to 10%
- Engaged in Agile practices including backlog refinement, managing the scrum board, sprint planning, and customer acceptance

PROJECTS

MAZE SOLVER

A program that randomly generates and solves a maze

- Uses Python and the tkinter library to open a window and visually show the random creation and recursive depth-first-search algorithm implemented
- Implemented and wrote unit tests using the unittests library to test code throughout development

ASTEROIDS

A recreation of the beloved asteroids game

- Implemented the classic Asteroids game using Pygame, including ship control, asteroid movement, and collision detection
- Integrated class inheritance and vector math for smooth and realistic ship/asteroid interactions

TUNE TUESDAY APP

A music sharing app designed to keep in touch with friends and family during the Covid-19 lockdown. Designed UI with React, implemented Firebase database, and used Agile iterative development to complete the app over the course of a year

- Collaborated with a 4-person team to create an app for a client, delivering a completed product within the agreed project timeline while coordinating meetings with the client to ensure satisfaction with features
- Developed full stack skills and applied common design practices used to create modern applications such as: documenting progress using Agile methodologies, tracking development cycles, and iterative development

SPACE TRADER

A team project developed to recreate the classic space trader game

- Worked in a group of 4 to create a functioning replica of the old space trader game using Python and the Flask library
- Contributed to both the backend development and implementation of key game features to ensure an engaging user experience
- Applied Agile development and used GitHub for version control to coordinate efforts and meet project deadlines

SKILLS

Coding: Java , Python , Google Cloud Platform , MySQL , C++ , Angular 8

Proficiencies: Git, IntelliJ, VS Code, Pandas, Matplotlib, Agile Methodologies, Jira, Confluence, GitHub

Hobbies: Reading, Gaming, Juggling, D&D

EDUCATION

GEORGIA INSTITUTE OF TECHNOLOGY, COLLEGE OF COMPUTING

Atlanta, Georgia

Bachelor of Science in Computer Science

- **Concentrations:** Intelligence (AI and Machine Learning), People (Human Computer Interactions)
