PROFESSIONAL SUMMARY

Results-driven Data Engineer with over 3 years of experience in designing, developing, and optimizing scalable data solutions. Proficient in leveraging cloud platforms like AWS and Azure to build robust ETL pipelines, integrate diverse data sources, and enable real-time analytics. Demonstrated ability to drive efficiency in data processing and storage, leading to significant cost reductions and performance improvements. Adept at collaborating with cross-functional teams to deliver data solutions aligned with business objectives. Known for innovative problem-solving and strong documentation skills, contributing to enhanced team productivity and streamlined operations.

EXPERIENCE

Data Engineer | Amazon

08/2023 - Present | Remote, USA

- Led the design and implementation of scalable ELT pipelines using AWS Glue and Amazon Redshift to process and integrate data from diverse sources, including transactional databases, IoT sensors, and third-party APIs.
- Cleaned, transformed, and enriched the ingested data using Python and PySpark to ensure high-quality data was available for business intelligence and machine learning models.
- Developed and maintained scalable ETL pipelines using Python, Apache Spark, and Airflow, processing over 100 GB of data daily from various sources.
- Designed and implemented data warehouse solutions on AWS using S3, and Lambda, enabling faster data retrieval and analytics.
- Optimized complex SQL queries and managed PostgreSQL and MongoDB databases, reducing query run-time by 15% and improving data retrieval efficiency.
- Conducted exploratory data analysis (EDA) on processed data to uncover trends and anomalies that were critical for decision-making in Amazon's supply chain and logistics operations.
- Worked closely with data scientists, software engineers, and business stakeholders in an Agile environment to align the ELT pipelines with business goals.
- Developed comprehensive documentation for the entire ETL process, including pipeline architecture, data flow diagrams, and operational procedures.
- The enhanced data pipeline architecture not only streamlined data processing but also enabled real-time analytics, which was previously unattainable.

Data Engineer | LTI Mindtree

06/2020 – 07/2022 | India

- Developed and managed scalable data storage solutions using Azure Data Lake Storage, and MySQL to enable efficient data retrieval and analytics.
- Orchestrated complex data workflows for real-time and batch data processing leveraging tools like Apache Kafka, and Azure Stream Analytics.
- Performed advanced data analysis and transformation using PySpark, Pandas, and NumPy, delivering actionable insights through visualizations in Tableau, Power BI, and Matplotlib.
- Led the documentation of 30+ data engineering processes and best practices in Confluence and JIRA, ensuring clear communication and streamlined project management.
- Utilized databricks and Python to clean, transform, and optimize large datasets, reducing data processing time by 40% and improving query performance.
- Played a key role in setting up automated data validation scripts using Airflow, reducing data discrepancies and enhancing data quality assurance processes by 35%.
- Managed and optimized Azure Data Lake Storage, ensuring efficient storage and retrieval of data, which resulted in a 30% reduction in storage costs.
- Collaborated with cross-functional teams of 5+ members to design and implement CI/CD pipelines using Jenkins, Azure DevOps, automating data processing workflows and ensuring smooth deployments.

EDUCATION

Master of Science in Data Analytics
TRINE UNIVERSITY

08/2022 - 05/2024

Bachelor of Technology in Computer Science and Engineering
LOVELY PROFESSIONAL UNIVERSITY

07/2018 - 05/2022

CERTIFICATION

Aws Certified Data Engineer – Associate (DEA -C01)
Microsoft Certified: Azure Database Administrator (DP-300)

SKILLS AND COMPETENCIES

Languages: Python, R, SQL, Scala, JavaScript.

Data Engineering Tools: AWS Glue, Amazon Redshift, Azure Data Factory, Azure Databricks, Apache Spark.

Data Storage & Management: AWS S3, Redshift, Azure Data Lake Storage, SQL Server, NoSQL Databases (MongoDB, Redis), Relational Database, PostgreSQL.

Data Transformation & Analytics: PySpark, Pandas, NumPy, Scikit-learn, Matplotlib.

Real-Time Data Processing: Azure Stream Analytics, Apache Kafka, Apache Airflow.

CI/CD & Automation: AWS, Code Pipeline, Code Build, Jenkins.

Data Visualization: Tableau, Power BI, Excel.

Collaboration & Documentation: Confluence, JIRA, Git, MS Visio.
