

EDUCATION

Bachelor’s Degree in **Computer Science** [*Honors*], University of South Florida

August 2024

EXPERIENCE

AlpineIQ (AIQ) [**S t a r t u p**] – **Software Engineer**

Oct 2024 – June 2025

Core backend engineer in a 4-person team, leading the design, development, and scaling of real-time, large-scale backend platforms—delivering 8 major product features in 6 months that drove AlpineIQ’s \$12M revenue growth and 800% scale-up, earning #2 fastest-growing startup in the US.

- Built backend SaaS microservices in Python and Go, enabling scalable audience targeting, personalization, and loyalty features.
- Optimized PostgreSQL and MongoDB queries, improving API response times by 65% across millions of daily records.
- Designed and deployed REST APIs and CI/CD pipelines with GitHub Actions and GCP Cloud Build, accelerating release cycles.
- Developed real-time GCP data pipelines with Pub/Sub and BigQuery, supporting live personalization at scale.
- Deployed and managed services using Docker and Kubernetes, ensuring high availability during traffic surges.
- Built automated test pipelines and coverage reporting to maintain product quality during rapid releases.
- Participated in on-call rotations, design reviews, diagnosing and resolving production issues with minimal downtime.
- Partnered directly with clients and stakeholders to translate business needs into technical solutions.

Novanta – **Software Engineer CO-OP**

Jan 2024 – July 2024

Contributed to AI-powered next-gen medical device software used by 2,500+ medical centers worldwide, leading the development of scalable AI/ML models (computer vision, RAG, and fine-tuned LLMs) and GenAI solutions.

- Designed and implemented a RAG-based agent using in-house fine-tuned LLMs, leveraging PyTorch, TensorFlow, LangChain, and prompt engineering—reducing semantic search times by 45% while improving retrieval accuracy.
- Deployed Computer Vision (CV) models on Azure Kubernetes Service, enabling real-time analysis for 9,500+ daily patient scans.
- Implemented CI/CD pipelines with Azure DevOps, boosting deployment frequency by 50%, maintaining 99.9% system uptime.
- Integrated GenAI features automating report generation, saving clinicians 15+ hours/week in administrative tasks.
- Collaborated cross-functionally with medical experts, QA, and product teams via full SDLC — gathering clinical requirements, designing solutions, implementing features, code reviews, and conducting rigorous testing to ensure regulatory HIPAA compliance and delivered innovative healthcare software.

United Parcel Services (UPS) – **Software Engineer Intern**

May 2023 – August 2023

Delivered full-stack infrastructure enhancements across 5,000+ UPS retail stores, modernizing kiosk dashboard systems (UI/UX) and applying design principles (OOP) to enhance user experience and customer store activity time by 35%.

- Revamped kiosk and dashboard UIs using React, Angular, and async JavaScript, reducing package processing time by 40%.
- Engineered high-performance Java and C++ APIs with OOP and DSA principles, boosting transaction output by 70%.
- Optimized design for shipment/store schemas and MySQL queries, doubling reporting speed, and eliminating timeouts.
- Deployed and scaled services on AWS ECS and Lambda, achieving 99.99% uptime during seasonal traffic peaks.
- Developed Linux & Windows automation scripts (Bash, PowerShell) running 1,000+ regression tests nightly, cutting QA cycles by 60% and catching defects 2 sprints earlier.
- Led Agile sprint planning, retrospectives, and cross-team coordination to deliver 3 mission-critical store tools on schedule.

PROJECTS

Food Calorie Estimator (ShellHacks 2024 Winner – Acquired by Planet Fitness)

PyTorch, CNN, Transformer, OCR, OpenCV, C#, .NET, Node.js, TypeScript, AWS, DynamoDB, Scikit-learn

- AI-powered calorie tracker application that analyzes food photos to estimate calories using a CNN+Transformer (91% accuracy) with OpenCV portion detection (70% less logging). C#/Node.js backend & TypeScript UI components deployed on AWS Lambda, boosting diet adherence by 35%.

Cloud-Native Identity Onboarding Platform (Used across 150+ events in the US)

AWS EKS, Terraform, .NET Core, Angular, AWS Rekognition, Tesseract, DynamoDB, PostgreSQL, GitHub Actions

- A secure, AI-driven identity verification system combining facial recognition (AWS Rekognition) and document OCR (Tesseract) for frictionless KYC. Built with zero-trust .NET Core microservices on AWS EKS, it reduced onboarding time to under 2 minutes while cutting fraud by 90%.

SKILLS

Languages & Frameworks:	Backend:	Python, Golang, Java, C, C++, C#, .NET Core
	Frontend:	Spring Boot, TypeScript, JavaScript (ES6+), React, Angular, HTML/CSS
	Data:	SQL (PostgreSQL, MySQL, BigQuery), NoSQL (MongoDB, DynamoDB)
	Scripting:	Shell - Bash (Linux/Unix), PowerShell (Windows), PHP
Cloud & DevOps:	Platforms:	AWS (Lambda, EKS, S3, SageMaker), GCP (Pub/Sub, BigQuery, Cloud Run), Azure (AKS, DevOps)
	Infrastructure:	Kubernetes (GKE, EKS), Docker, Terraform, CI/CD (GitHub Actions)
	Architecture:	Microservices, Serverless, Event-Driven, FAST/REST/gRPC APIs
AI/ML & Data Engineering:	Core ML:	PyTorch, TensorFlow, Scikit-learn, NLP
	MLOps:	Model deployment (SageMaker, AKS), LLMs (RAG, fine-tuning), LangChain
	Data Pipelines:	Apache Spark, Kafka, ETL
	Computer Vision:	CNN, Transformers, OpenCV, CLIP
Tools & Practices:	Development:	Git, JIRA, Postman, PyCharm, VS Code
	Testing:	Selenium, Unit/Integration Testing
	Methodologies:	Agile (Scrum/Kanban)

CERTIFICATIONS

- Data Structures & Algorithms
 - Natural Language Processing
- Microsoft Certified – Azure Data Fundamentals
 - AWS Certified Developer – Associate
