

Summary:

Java Full Stack Developer around 5 years of experience in building scalable enterprise applications and cloud-native solutions using **Java 17, Spring Boot, Angular, and AWS**. Skilled in developing **RESTful APIs, microservices**, and implementing **CI/CD pipelines** with **Jenkins, Docker, and Kubernetes**. Experienced in **real-time data processing** with Kafka, **asynchronous messaging** via JMS/RabbitMQ, and managing databases like **MySQL, MongoDB, and Oracle**. Adept at Agile, TDD, and cross-functional collaboration to deliver high-performance, secure, and user-focused solutions. Hands-on experience with **frontend technologies** such as **Angular and ReactJS**, combined with a deep understanding of **backend development** and **database systems** including **MySQL, Oracle, and MongoDB**. Skilled in **CI/CD pipelines** using **Jenkins, Docker, and Kubernetes**, as well as real-time data processing with **Kafka**, and asynchronous messaging using **JMS** and **RabbitMQ**.

Skills:

- **Programming Languages:** Java (Java 8–17), JavaScript, TypeScript, SQL, Python (basic).
- **Frontend Technologies:** Angular (up to v14), ReactJS, Redux, HTML5, CSS3, JSP, Bootstrap, AJAX, jQuery
- **Backend & Frameworks:** Spring Boot, Spring MVC, Spring Data JPA, Spring Security, Hibernate, RESTful APIs, Express.js, Microservices Architecture.
- **Web Services:** REST (JAX-RS, Jersey), SOAP (JAX-WS), Postman, SoapUI.
- **Messaging & Streaming:** Apache Kafka, RabbitMQ, JMS (Java Message Service), Apache Camel
- **Cloud & DevOps:** AWS (EC2, S3, Lambda, Glue, VPC, CloudFormation, CloudWatch), Docker, Kubernetes, Jenkins, Maven, Git, CI/CD Pipelines.
- **Databases:** MongoDB, MySQL, Oracle, Couchbase.
- **Testing & Automation:** JUnit, Mockito, Selenium WebDriver, Jest, React Testing Library, ReadyAPI.
- **Tools & Practices:** Agile (Scrum), JIRA, Git, Log4j2, Design Patterns (DTO, DAO, Singleton, Factory).

Education:

- MS Computer Science from Texas Tech University - Lubbock, TX

Professional Experience

BMO Harris Bank | Java Full Stack Developer | Aug 2024 - Current

- Developed and optimized **RESTful APIs** using **Spring Boot and Hibernate**, improving data retrieval speed by **25%**.
- Actively engaged in **Agile ceremonies** such as sprint planning, daily stand-ups, and reviews, ensuring **95% on-time delivery** of assigned tasks.
- Led Agile development initiatives using **JavaScript and Java**, achieving a **30% reduction in cycle time** through effective Scrum practices and microservices implementation.
- Promoted team collaboration through **code reviews**, performance optimization, and **mentoring junior developers**, fostering continuous growth and knowledge sharing.
- Designed and enhanced dynamic **front-end components** using **JSP and JavaScript**, resulting in a **20% improvement in user experience**.
- Implemented **CI pipelines** using **Jenkins** and managed builds with **Maven**, cutting deployment times by **30%**.
- Automated repetitive tasks, boosting developer **productivity** and reducing manual errors in the SDLC.
- Resolved **90% of production issues within SLA** by real-time debugging and troubleshooting; maintained high-quality code through **unit and mock testing** with **JUnit and Mockito**, achieving **85% test coverage** for new modules.
- Successfully built and managed **CI/CD pipelines** using **Git, Jenkins, and Docker**, streamlining deployments, enabling automated testing (unit, integration, E2E), and accelerating release cycles.
- Utilized **Eclipse IDE** for efficient coding and debugging, and deployed web applications on **Apache Tomcat**, streamlining the development-to-deployment workflow in a controlled server environment.
- Collaborated closely with the **QA team** during **User Acceptance Testing (UAT)** to validate features and resolve issues, contributing to a **25% reduction in post-release bugs**.
- Adhered to structured **test plans and regression strategies** to ensure reliable, high-quality, and error-free software releases.

USAA | Java Full Stack Developer | Jan 2020 - Jul 2023

- Participated in all phases of the Agile SDLC, from story decomposition and sprint planning to development and testing, ensuring timely delivery of features aligned with business goals.
- Designed and developed scalable full-stack Java applications, integrating robust back-end logic with dynamic front-end components using Angular 14, TypeScript, HTML5, and CSS3.
- Built reusable UI components using Angular's component-based architecture to enhance maintainability and front-end performance.
- Developed microservices with Java 17 and Spring Boot, implementing RESTful APIs and applying J2EE design patterns like DAO, DTO, and Service Locator.
- Automated deployments using Jenkins, containerized applications with Docker, and orchestrated services with Kubernetes, streamlining the CI/CD pipeline.
- Developed and configured Kafka-based producer/consumer services to enable real-time event streaming and decoupled service communication.
- Managed **AWS cloud infrastructure**, including **EC2, S3, Lambda**, and **AWS Glue**, for scalable deployment and serverless ETL processing.
- Implemented logging and monitoring using Log4j2, and managed sprint tasks and issue tracking through JIRA.
- Conducted unit and integration testing with JUnit, Mockito, Postman, and SoapUI, ensuring high system reliability and performance.
- Managed project builds and dependencies with Maven, improving efficiency across compilation, testing, and deployment stages.
