

KRISHNA NEUPANE
(469)260-7697 | krishnaneupane.dev@gmail.com | Irving, TX

EDUCATION

Master of Science: Cybersecurity, and Information Assurance, 2024 Western Governors University,
Salt Lake City/ Utah, USA

VISA STATUS

U.S. Citizen

CLEARANCE AND CERTIFICATIONS

CURRENT PUBLIC TRUST CLEARANCE

- Certified Information Systems Security Manager (CISM)
- Certified Associate in Project Management (CAPM)
- CompTIA Advanced Security Practitioner (CASP)
- CompTIA Cybersecurity Analyst (CySA+)
- CompTIA PenTest+
- AWS Certified Solutions Architect – Associate
- AWS Certified Developer – Associate

PROFESSIONAL SUMMARY

-
- Experienced Full-Stack Java Developer with over 7+ years of professional experience with full project lifecycle development in Java and Web technologies, Requirements analysis, and Design, Development, Testing, Deployment, and production support of software applications.
 - Working knowledge in Core Java and J2EE platform with Servlets, JSP, JDBC, Multithreading, Hibernate, Spring MVC, Spring Boot, Spring Data JPA, Microservices.
 - Proficient in front-end development using JSP, JSTL, HTML, CSS, JavaScript (Bootstrap/ Angular/React).

- Expertise in developing SOAP, RESTful Web services with Microservices and APIs with JSON and XML.
- Skillful in handling unit testing using Junit, Mockito along with Test-Driven Development (TDD) methodology.
- Experienced working in Agile-based SDLC environment and participating in different Scrum sessions.
- Always lean to learn newer technologies and implement them to get the full advantage of them.
- Proven track record in leading software development Agile teams to deliver resilient and reliable software products that meet customer expectations and business requirements.
- Well-versed in collaborating with business and IT cross-functional partners to prioritize needs and maximize system functionality, contributing to organizational strategy and compliance.
- Well-versed working with IT and business leaders to develop IT strategy and roadmaps.
- Experienced in recruitment and building engineering teams, coaching, and developing development plans for team members.
- Hands-on experience developing microservices architecture APIs using Java/Spring Boot and C#.NET framework.
- Well-versed in AWS and Azure platforms, led multiple monolithic application modernization to cloud-native solutions using modern tech stack and microservices architecture.
- Well-versed in developing Systems, and cross-system integrations using various architecture patterns.
- Hands-on experience developing solution architecture following performance and security standards.
- Well-versed driving QA automation and modern Infra automation and CICD platforms.
- Experienced with GCP as well as Jenkins and Docker, Kubernetes, Terraform, AWS EC2, S3 storage, Log4j, GitHub, Bitbucket and IDE/Tools like Eclipse, STS, IntelliJ, SQL Developer, Maven, Gradle, Pivotal Tracker, and issue tracking platform like JIRA.

TECHNICAL SKILLS

- **Programming Languages:** Java, C#, .NET, Scala, PHP
- **Frameworks & Libraries:** Spring Framework, Hibernate, Grails, Akka, Angular 1/2+, React, Ionic, Nodejs
- **Databases:** SQL Server, MySQL, Oracle, PostgreSQL, MongoDB
- **Cloud & DevOps:** AWS, Azure, GCP, Pivotal Cloud Foundry (Tanzu), Kubernetes, Terraform, Docker, Jenkins
- **API Design:** REST, gRPC, SOAP, GraphQL
- **Testing & Quality Assurance:** JUnit, Mockito, Selenium, Swagger, Cypress
- **Other:** HTML5, CSS3, Tomcat, Agile/Scrum, Performance Optimization, Microservices Architecture

PROJECTS

CGI Federal, Dallas, TX - Full Stack Java Developer

Apr 2022 – Present

- Led a team developer, UI engineers, and QA specialists, driving collaboration across distributed teams to deliver scalable solutions.

- Developed RESTful APIs and batch services using **Spring Framework** and **Spring Batch**, enabling efficient backend operations and seamless frontend consumption.
- Designed and implemented robust solution architectures, including API planning, database schemas, and system frameworks for enterprise applications.
- Created and maintained UIs using **Angular** and **React** for job control/update tasks and automation of manual processes.
- Refactored legacy code to support reactive programming with **MapStruct**, **Akka**, and **newer Spring** libraries, improving system performance.
- Automated build, test, and deployment phases using **CI/CD pipelines** with **Jenkins**, reducing time-to-market for microservices-based applications.
- Defined and enforced coding standards, conducted internal security code reviews, and implemented recommendations using **SonarQube** and Checkmarx.
- Adopted **Test-Driven Development (TDD)** practices using **JUnit**, **Selenium**, **Mockito**, and **Swagger** to ensure quality and reliability.
- Utilized **AWS** services for deploying, scaling, and managing high availability **microservices** with authentication/authorization using **OAuth 2.0** and **JWT**.
- Mentored junior developers in secure coding, **OWASP** standards, and technical growth initiatives.
- Designed and implemented a submission state using Spring State Framework with a Kafka-based event-driven architecture for distributed lifecycle management
- Led UI-based microservice development for large-scale applications, improving usability and system efficiency.

State Farm Insurance, Richardson, TX - Full Stack Java Developer

Mar 2021 – Apr 2022

- Developed java modules implementing business rules and workflows using Spring Boot.
- Involved in the design and development phases of Agile Software Development.
- Involves in Sprint planning for the estimation of efforts for user stories and bug.
- Designed and developed the REST based Microservices using the Spring Boot.
- Integrate Spring Framework with Hibernate for using transaction management to deal with the back-end data management.
- Writing the test cases for unit testing the code using Easy mock testing Framework.
- Doing the performance analysis on the code and carrying out code refactoring on the existing code.
- Involved in the deployment process of the application on WebSphere Application Server 6.0.
- Config the web-services within Spring, for calling them directly from the application side Perform code review and test cases review for the developed code.
- Get the error report and analyze the defects and categorize the defects using the SPLUNK tool.
- Handling code merges between different code streams using Gitlab/Git.
- Used Maven and Jenkins for building applications and deploying to application Server.
- Involved Root cause analysis of problem record.

- Provide support during System Test, Performance, Implementation and Production Checkout Phases.
- Worked on Restful web service for retrieving and sending data to external applications.
- Written stored procedure in Oracle database.
- Extensive experience working in an agile development environment.
- Worked in Test Driven Development.

Bank of America, Newark, DE - Full Stack Java Developer

Dec 2019 - Mar 2021

- Worked on Java web application suites for Bank of America for high value performance operations to meet the client's requirements.
- Involved in analysis, specification, design and implementation, and testing phases of Software Development Life Cycle (SDLC) and participated in stand-up, review, and meetings as a part of Agile.
- Developed RESTful APIs using the Spring Framework, deployed on AWS and consumed by frontend clients as well as other microservices.
- Worked for debugging and troubleshooting the application code to meet the expected outcome.
- Development on multiple projects including a resource and project tracking system used by project managers and executives of the company.
- Designing the new services which includes planning the APIs, Database structures, and Architecture as well.
- Implemented AWS's SQS and SNS to communicate via different microservices.
- Writing Liquibase scripts to manage changes in different environments.
- Creating a new component in Ionic Framework using Angular for the new features implemented.
- Created an internal library that is used to verify the payloads coming and going through different modules.
- Test-Driven Development using Junit, Mockito and Swagger as well.
- Created a tool for some modules of AWS to help developers to work in their local environment using localstack.

AT&T, Plano, TX - Full Stack Java Developer

Aug 2018 - Dec 2019

- Development on multiple projects including a resource and project tracking system used by project managers and executives of the company.
- Involved in analysis, specification, design and implementation, and testing phases of Software Development Life Cycle (SDLC) and participated in stand-up, review, and meetings as a part of Agile.
- Contribute to solution development in the areas of process flow, business logic & user interface & integration services

- Splitting the old Monolithic system to the new small microservices using the Spring Cloud technologies like Zull, Zipkin, eureka, etc.
- Integrated new search API across all the projects.
- Move costly query calls from the SQL Server/SAP to MongoDB.
- Replaced old utils methods to the new functional interfaces provided by Java 8.
- Extensively designed page layout using HTML5, CSS3 with jQuery to perform the front-end validations and used JavaScript, JSP, Servlets, jQuery, JSON, and Ajax for developing interactive User Interfaces.
- Migrated projects from Spring MVC to Spring Boot.
- Implemented Actor model using AKKA tool to replace old DB-centric OBC jobs with new search API.
- Used Spring framework for rapid development and SQL Server as the backend database.
- Developed RESTful API with Spring Framework which is consumed by the frontend as well as other microservices.
- Developed Batch services using the Spring Batch and created a UI using react to control/update the jobs.
- Created specific log files for the search-related task for the analysis in the ELK stack.
- Redesign the previous UI with the latest React framework in the front end.
- Test-Driven Development using Junit, Selenium, Mockito, and Swagger as well.

Danfee Inc, Kathmandu, Nepal - Full Stack Developer

Aug 2013 - Oct 2015

- Developed RESTful web services using Spring and PHP frameworks like CodeIgniter.
- Built dynamic, responsive, and cross-browser compatible UIs using HTML, CSS, JavaScript (jQuery), and AngularJS.
- Gathered requirements for new features and prepared technical design specifications with UML diagrams
- Improved system performance by integrating technologies like Elasticsearch and AngularJS.
- Maintained legacy systems built with the Groovy and Grails framework.
- Designed and implemented database schemas and queries with MySQL and Oracle.
- Managed internal and external application upgrades.
- Evaluated and identified new technologies for implementation.
- Supported, maintained, and documented software functionality.
- Actively participated in the software maintenance phase.
- Demonstrated full-stack expertise across all layers of web development.
- Collaborated with the development team to deliver high-quality web applications.
