SUMMARY:

Result driven Data Engineer with over 3 years of experience in Python, SQL, and cloud platforms (AWS, Azure, GCP). Skilled in predictive analytics, data modeling, and creating dashboards using Tableau and Power BI. Proven success in optimizing workflows and delivering insights in healthcare and insurance industries. Experienced in regulatory compliance reporting and advanced data visualization. Open to relocation within USA.

CERTIFICATIONS:

- Google Professional Data Engineer
- AWS Developer Associate
- Google Cloud Associate Cloud Engineer
- Microsoft Azure Fundamentals (Az-900)

SKILLS:

- **Programming Language:** Python, R, SAS, MATLAB, JavaScript.
- **Data Analysis Tools:** NumPy, Pandas, Matplotlib, SciPy, OpenCV, scikit-learn, TensorFlow, XGBoost.
- **Database Management:** SQL (MySQL, PostgreSQL), NoSQL (MongoDB), Hadoop, Spark, Oracle.
- **Visualization Software:** Tableau, Power BI, Microsoft Excel, Looker.
- **Data science & Analytics:** Data Analytics, Data Visualization, Data Mining, Data Modeling, Ad Hoc Analysis, Predictive Analytics.
- **Project Management:** Jira, Agile Methodologies, Stakeholder Collaboration

EXPERIENCE:

Data Engineer – Elevance Health Inc., New York

May 2023 - Current

- Developed and deployed data-driven solutions for predictive modeling and prescriptive analytics, optimizing healthcare service offerings and reducing claim processing times by **17%**, leveraging **SQL** and **Python**.
- Designed interactive dashboards using **Power BI** to track patient outcomes, improving decision-making and increasing operational efficiency by **15%**.
- **Improved query performance** by **60%** through query optimization, materialized views, and indexing strategies in **SQL** and **Snowflake**.
- Configured **Airflow DAG monitoring** to track job success rates, retries, and SLA breaches, improving pipeline reliability by **98%**.
- Automated data collection and data cleaning processes for healthcare claims data, enhancing data accuracy and reducing retrieval time by **20%** through cloud-based platforms like **AWS** and **Snowflake**.
- Led a data modeling initiative for patient readmission predictions, decreasing hospital readmissions by **7%** with **diagnostic analytics** and **machine learning**.
- Developed healthcare compliance reports for regulatory bodies, ensuring data integrity and meeting **HIPAA** standards with **100%** accuracy using **SQL** and **data visualization**.

Data Analyst – ICICI Lombard Insurance Ltd., India

Jan 2022 - Jun 2022

- Engaged with internal stakeholders to gather data requirements for patient demographics and claim analysis, ensuring alignment across departments and improving data quality by **10%** through **Salesforce CRM** and **ETL tools**.
- Analyzed and cleaned large datasets related to patient demographics, improving data quality and accuracy by **12%** using **Python** and **R** for **statistical analysis**.
- Created custom reports using **Excel** and **Power BI** to track operational metrics, reducing reporting time by **15%** and increasing visibility into healthcare service performance.
- Managed data synchronization across **Oracle NetSuite** and cloud platforms, implementing **ETL** pipelines, real-time integration, and archival solutions for legacy data storage.

Junior Data Analyst – ICICI Lombard Insurance Ltd., India

Jun 2021 - Dec 2021

- Assisted in designing business intelligence dashboards in **Power BI** to track customer segmentation and insurance policy performance, leading to a **12%** increase in cross-selling opportunities.
- Automated data workflows to streamline **policy renewal processes**, cutting renewal cycle time by **20%** using **Python** and **ETL frameworks** for **data integration**.
- Designed and implemented basic automated workflows using **PowerApps**, **SharePoint** and **Power Automate** reducing manual processes and enhancing business workflow efficiency.

EDUCATION:

New England College, NH

Aug 2022 - May 2024

Master of Science, Computer Science

CGPA – 4.00

Vellore Institute of Technology, India

Aug 2018 – Jul 2022

Bachelor of Technology, Computer Science

CGPA - 3.80

PROJECT:

ChemScan: Your Guide to Chemical-Free Living

- Developed application leveraging GCP for real-time data processing, storage, and analytics. Built data pipelines for ingredient scanning and nutritional analysis using Python and GCP services like BigQuery and Cloud Functions. Designed visualizations (graphs, nutrition scores) with data analysis libraries. Implemented location-based notifications and device interoperability for seamless experience. Integrated APIs for social media sharing and ensured scalable performance with GCP infrastructure.
