Summary

Data Analyst with 2+ years of experience using Python, SQL, Excel, and Tableau to transform complex datasets into actionable insights. Skilled in data cleaning, visualization, and reporting for EdTech and academic projects. Strong analytical mindset with a passion for problem-solving, efficiency improvement, and decision support.

Technical Skills:

Tools: SQL, Power BI, Tableau, Excel, Forecasting, Report Automation, Data Cleaning, Data Visualization, Data Analysis, AutoCAD, MATLAB, GitHub

Programming & Automation: Python, R, Django, Java, JavaScript, HTML, CSS

ML & Modeling: Regression, Classification, Random Forest, CNN, RNN, Feature Engineering, Statistical Analysis, LLM

Databases & Cloud: MySQL, AWS, DBMS, Azure

Professional Experience:

Junior Data Analyst

ZettaByte Plus (formerly ZettaByte SoftTech)

June 2021 – July 2023

- Cleaned and analysed large datasets using Python and SQL, improving data quality and reporting accuracy by 30%.
- Designed and maintained Tableau dashboards to track engagement and attendance trends, reducing manual reporting efforts by 40%.
- Built automated Excel reports identifying underperforming students, enabling timely academic interventions.
- Collaborated with cross-functional teams to evaluate user behaviour and product adoption, leading to a 15% improvement in student outcomes.
- Conducted A/B testing on learning platform features, providing data-driven recommendations that improved feature engagement by 18%.
- Streamlined reporting workflows by creating reusable SQL scripts and Python automation scripts, reducing manual processing time by 25%.
- Analysed survey and feedback data to understand user satisfaction and platform usability, contributing to a user interface redesign.
- Worked closely with business analysts and engineers to define KPIs and reporting requirements, aligning analytics with business goals.

Projects:

Block Tix: Ticketing Reinvented with Blockchain

- Developed a decentralized NFT-based ticketing solution using smart contracts to prevent fraud and scalping, with 0% fraud confirmed through blockchain validation.
- Designed a mobile-first prototype in Justinmind and implemented a SaaS monetization model with automated resale royalties for secure and scalable ticket management.

Food Image Classification & Restaurant Feature Prediction

- Developed CNN models using TensorFlow to classify food images with 90%+ accuracy.
- Built regression models in Python to predict cuisine, cost, and rating based on restaurant metadata.

Last Minute Hotel Booking App

- Built a real-time hotel booking web app using Bubble.io with dynamic pricing logic.
- Designed backend logic and implemented booking flow, resulting in a seamless checkout experience.

EcoGrow — Smart Farming Prototype

- Designed an IoT-powered agriculture monitoring solution to improve farm efficiency by SPRINT method.
- Demonstrated strong adaptability and technical prototyping skills.

The Power of E-Commerce

- Designed and implemented robust e-commerce databases to support international trade in the digital economy.
- Focused on optimizing transaction efficiency and enhancing digital customer interactions through data-driven solutions.

Education:

California State University, Long Beach

Master of Science in Information Systems

May 2025

Relevant Coursework: Business Data Analysis, Machine Learning, Deep Learning, DBMS, Responsible AI

Sree Vidyanikethan Engineering College

Bachelor of Technology in Electronics & Communication Engineering

June 2022

Publication:

"A Triple Band Printed Wearable Antenna for Remote Healthcare Monitoring Device"

- Designed and optimized a CPW-fed wearable antenna using PREPERM substrate and split-ring resonators.
- Simulated and validated performance with ANSYS HFSS across WLAN, WiMAX, and Bluetooth bands.
