Summary :

Full-stack web development, cloud-native solutions, and database management. Skilled in Java, Spring Boot, React.js, Next.js, and modern DevOps tools, with additional exposure to machine learning techniques. Proven ability to design and implement scalable applications, integrate APIs, and optimize system performance through project-based work and internships. Strong foundation in problem-solving, debugging, and algorithm design, with hands-on contributions to healthcare, IoT, and enterprise-level applications.

Work Experience:

Full-Stack Developer Intern , WinWinLabs, USA

May 2025 – Present

- Developed modular user interfaces with React.js, Next.js, and Tailwind CSS for real-time monitoring of ESP32-based IoT sensor data, ensuring seamless data visualization and user interaction.
- Integrated RESTful APIs to handle live ambient and product-level readings, including temperature anomaly detection and alerting features, enhancing system reliability for FDA-compliant food safety applications.
- Contributed to a scalable, cloud-native solution targeting cold storage, logistics, and manufacturing sectors, collaborating on code reviews and deployment to improve overall project efficiency.

Lost & Found Object Tracking System, Saint Louis University, St. Louis, MO

Jan 2024 – Jun 2024

- Developed a Lost & Found Management System using Java, Spring Boot, Hibernate, and MySQL to help students track misplaced objects.
- Implemented user roles (Student, Finder, Admin) with authentication and access control.
- Built modules for lost item reporting, found item uploading (with photo), and claim verification.
- Integrated email notifications to alert users about newly found items.
- Designed an admin dashboard for item approval, matching, and tracking returned items.

Technical Skills:

- | | |
|--------------------------------|--|
| • Programming Languages: | Java, Python, PHP, JavaScript, C, Swift, HTML/CSS, Tailwind CSS, TypeScript, SQL |
| • Frameworks & Tools: | Spring Boot, Spring MVC, Hibernate, Thymeleaf, React.js, Node.js, Next.js |
| • Databases: | MySQL, PostgreSQL, MongoDB |
| • Web Technologies: | HTML5, CSS3, Bootstrap5, jQuery, Ajax, JSON, XML, Redux |
| • DevOps & Version Control: | Git, GitHub, Jira, Postman, Docker, Kubernetes, Jenkins, Maven |
| • Machine Learning & Analysis: | Pandas, NumPy, Scikit-learn, KNN, Random Forest |
| • Development Environments: | IntelliJ IDEA, VS Code, MySQL Workbench, Jupyter, Xcode |
| • Additional Skills: | Problem-Solving, Debugging, Code Optimization, Algorithm Design, Team Collaboration, Agile Methodologies |

Education :

Saint Louis University

Master of Science in Computer Science (GPA: 3.5/4.0)

St. Louis, MO, USA

August 2023 – May 2025

Internship Experience:

Software Engineering Virtual Internship, Walmart USA (Forage Program)

June 2025

- Implemented a custom heap data structure in Java to optimize shipping operations, demonstrating strong algorithmic problem-solving skills.
- Designed UML class diagrams for reusable data processing systems, focusing on modularity and scalability.
- Created Entity-Relationship Diagrams (ERDs) based on business requirements from the pet department, applying database design principles to support efficient data management.

Key Projects :

Job Portal Web Application | Spring Boot, Hibernate, Thymeleaf, Spring Security

- Built a secure, role-based job portal managing user authentication and access control for admin and user roles.
- Optimized Hibernate queries, improving performance by 20% for job posting, searching, and application management.
- Developed backend logic for CRUD operations on job listings and user profiles, ensuring data integrity and a responsive UI.

Book Store Management System | Spring Boot, Thymeleaf, MySQL

- Created a full-stack inventory system to streamline book management processes.
- Reduced data retrieval time by 15% with efficient database table design and CRUD operations.
- Designed a responsive UI for adding, updating, and deleting books with user-friendly features.

Movie Recommendation System | Python, Pandas, Scikit-learn

- Developed a recommendation engine using cosine similarity for personalized movie suggestions based on user history.
- Improved prediction accuracy by 15% through data preprocessing, including duplicate removal and missing value handling.
- Processed large datasets to create a robust model, demonstrating real-world machine learning applications

Certifications:

- Advanced Software Engineering Virtual Experience – Walmart USA (Forage)
- PHP for WordPress – LinkedIn Learning (2020)
- Google Cloud Computing Certification
- Oracle SQL Certification
- Technical Hackathon Winner
