Education

Master of Science in Computer Software Engineering

Aug 2023 – May 2025

San Jose State University, USA

Course Work: Computer Networks, Data Mining, Data Structures & Algorithms, Database Management System, Enterprise Software Platforms, Operating Systems, Security Technologies, Software Engineering Processes, Software Quality Assurance and Testing, Software Systems Engineering, Web Programming

Experience

Jio Platforms | Software Engineer

Jun 2021 – Jul 2023

- Led development of the enterprise-grade **Re-imagined Procurement Platform** hosted on **AWS**, streamlining workflows across **Purchase Order**, **Invoice**, and **Joint Measurement Sheet** modules for 100+ business units.
- Developed REST APIs as part of scalable **Node.js microservices**, using layered architecture with DTOs, service, and repository classes; reduced response latency by **30%** and accelerated feature onboarding across procurement modules.
- Engineered modular **React.js** components with dynamic rendering, form validation, and API integration, reducing load time by **35%** and improving usability across dashboards through pagination, conditional styling, and consistent state management.
- Hardened 50+ endpoints using **JWT** authentication and **RBAC**, preventing privilege escalation and unauthorized access.
- Containerized backend services using **Docker**, deployed via **Kubernetes**, and integrated with **Git-based CI/CD pipelines**, reducing release time by **78%** and enabling seamless microservice rollouts with minimal manual intervention.
- Orchestrated **Kafka** pipeline for Excel-based JMS claims, tripling ingestion throughput and accelerating claim generation.
- Implemented observability with **Prometheus**, **Grafana**, and APM tools to trace async flows and reduce MTTR by **55%**.
- Increased test coverage by **40%** using **JUnit** and **Mockito**, reducing bugs and improving confidence in release cycles.
- Optimized API performance across **PostgreSQL** and **MongoDB** databases by implementing query indexing and restructuring payloads, reducing average response time by **60%** and enabling seamless handling of records under load.
- Leveraged **Redis** to cache frequently accessed data, reducing database load by **40%** and enhancing user experience with smoother interactions during peak traffic hours.

Ken42 EdTech Pvt. Ltd. | Software Engineering Intern

Feb 2021 – May 2021

- Spearheaded **Node.js** API development for LMS and academic calendar modules, resolving 20+ issues and enabling efficient scheduling, event tracking, and content access for 8000+ of students and faculty across institutional clients.
- Architected modular **React.js** components for **LMS dashboards**, cutting load time by **25%** and improving interactivity.
- Delivered **4** production features in **Agile** sprints, improving sprint velocity and accelerating deployment across three releases.
- Validated and documented **APIs** using **Swagger** and **Postman**, reducing integration bugs and feedback loops by **35%**.
- Streamlined **CI/CD** pipelines using **Git**, **Jenkins**, and **Maven**, reducing integration overhead by **30%** and improving deployment consistency.

Projects

Movie Booking Portal | React, Node.js, MongoDB, Express.js, Vercel, AWS EC2

- Constructed a user-friendly UI for theatre management using the **MERN** stack, incorporating user authentication, ticket booking, and an analytics dashboard. Ensured **0%** unauthorized access by integrating **JWT**, **bcrypt** encryption, **RBAC**.

StudyAI Assistant | React.js, Node.js, MongoDB, LLM, RAG, Pinecone, Docker, WebSockets

- Designed and developed an AI-powered learning platform with **Large Language Models** for personalized quiz generation and document summarization. Implemented **Retrieval-Augmented Generation (RAG)** with Pinecone **vector database** for intelligent information retrieval, enhancing search accuracy and delivering context-aware responses.

Smart Equity Recommendation System (RAG) | ReactJS, Python/FastAPI, Pinecone, WebSockets, JWT/RBAC

- Engineered a FastAPI + Pinecone **RAG** advisor using Alpaca live data and GPT-4; secured with **JWT/RBAC**, streamed via WebSockets, and benchmarked (120–250ms avg @ 100–500 users) with Prometheus/Grafana.

Technical Skills

Programming Languages: JAVA, Python, C++, JavaScript, C, SQL, PHP

Web Technologies: Springboot, Hibernate, Aurelia, HTML, CSS, Django, Swagger, REST API, React, Node.js, Express.js

Testing Frameworks: JUnit, Spock, Groovy, Selenium Web Driver

Cloud and Databases: Amazon Web Services (AWS), Microsoft Azure, Mongo DB, MySQL, PostgreSQL, MSSQL

DevOps & Tools: Docker, Kubernetes, Git, TortoiseSVN, Jenkins, Prometheus, Grafana, Graylog, Ansible, Linux

Achievements

A+ Performance rating: Awarded twice for active participation in team, problem-solving, customer defects, and escalations.)
Winner of CalHacks 11.0 for building an AI-powered automated crypto trading platform. [DevPost Portfolio \(Website\)](#)
HackerRank Certified Software Engineer. (HackerRank Platform). [HackerRank Platform \(Website\)](#)
