

KRISHNA VISHESH KATTA

9452517434 | visheshkrishh@gmail.com | [LinkedIn](#)

Full-Stack Software Engineer with 2+ years of experience building scalable, AI-powered applications using React, Node.js, Java, and PostgreSQL. Skilled in backend development with GraphQL, FastAPI, and Spring Boot, and deploying containerized microservices using Docker and Kubernetes on AWS. Experienced in integrating LLMs and NLP pipelines using LangChain, Hugging Face, and Transformers, including RAG architectures for real-time, context-aware features. Specialties include full-stack architecture, intelligent automation, and cloud-native system design.

WORK EXPERIENCE

Software Engineer | Veryable | Dallas, TX

April 2025 - Present

- Reduced cross-service latency by **40%** by architecting and validating **100+ GraphQL** and **REST API** operations across Workforce Management domains using modular Node.js logic, robust schema design, and **TDD** principles, developed comprehensive **unit tests** to ensure code reliability, resulting in faster UI responsiveness and more reliable data flows.
- Engineered a robust, bidirectional **event-driven** sync between WFM and Marketplace **microservices**, enabling real-time alignment of Locations and Work Areas for the **WFM Lite** release, reduced manual reconciliation by **85%**, improved cross-system data consistency by **90%**, ensured trial user access to Day View, and enforced contract integrity through validation and idempotent logic.
- Containerized backend microservices using **Docker**, creating efficient and reproducible Dockerfiles with **multistage builds** to optimize image size and build times
- Engineered complex **schedule visualization components** using custom grid rendering algorithms that calculate precise time-block positioning, handle overlapping shifts through intelligent grouping logic, and manage dynamic schedule layouts across multiple workers.

Software Engineer | Empower SoftTech | India

Jan 2023 - Jan 2024

- Designed, developed, and deployed a responsive restaurant website leveraging React, TypeScript, Node.js, and Express, optimizing performance and accessibility, which led to a 40% increase in customer engagement.
- Engineered a **scalable** GraphQL API layer to facilitate efficient data exchange between the front-end and back-end, reducing API payload size by 60% and cutting response time by **40%** through optimized query resolution and data fetching strategies.
- Used **Git**, **GitHub**, and **CI/CD pipelines** to manage code quality and automate deployments, accelerating delivery timelines by 25%.

PROJECTS

GenHub (Tech Stack: TypeScript, NextJS, React, tRPC, Prisma, LangChain)

- Developed an AI-driven SaaS platform that boosted developer efficiency by **35%** by integrating GitHub with AI-powered features including commit summaries using **LangChain** and **RAG** pipelines for context-aware codebase Q&A. Automated meeting documentation and improved developer onboarding speed by **40%** by building a real-time chat QA system with AssemblyAI and **GitHub API**, delivering accurate answers and concise summaries from live and historical project data.

AI-Powered Career Coach (Tech Stack: React, NextJS, PostgreSQL, NodeJS, Prisma, ShadCN, GeminiAPI)

- Built and deployed using** Next.js, Tailwind CSS, ShadCN UI, Prisma ORM, and PostgreSQL with real-time dashboards showing weekly industry insights, boosting user engagement by **30%**. Reduced resume writing time by **70%** via an AI Resume Builder powered by **Gemini API**, featuring ATS-optimized content, live markdown **editing**, and one-click PDF export.
- Engineered secure, **scalable backend** with API routes, Clerk-authenticated sessions, and persistent storage. Implemented serverless background jobs with Inngest; delivered polished, dark-mode UI with dynamic routing and animations. Boosted interview readiness for users with an AI mock interview system using role-specific questions, Recharts analytics, quiz history, and **LLM-generated** improvement tips.

Student Management System (Tech Stack: React, NextJS, Python)

- Engineered a comprehensive, role-based dashboard system tailored for students, teachers, and administrators using React, Next.js, and Tailwind CSS, providing real-time access to academic data and reducing load times by **20%**. Enhanced backend architecture by implementing **FastAPI** components to optimize database queries, reducing API response times by **35%** across multiple endpoints

Music Streaming Platform

- Engineered a full-stack music streaming platform, integrating **real-time** audio playback and an interactive chat system, enhancing user experience through seamless media streaming, live activity tracking, and real-time interactions, resulting in a **30%** increase in user engagement.
- Implemented a track queueing algorithm for autoplay, increasing user retention by **40%**. Integrated **WebSockets** (Socket.io) for real-time chat and activity tracking.
- Developed a dashboard displaying real-time insights on user activity, music streaming patterns, and system analytics using MongoDB Aggregations, aiding data-driven decisions.

EDUCATION

University of North Texas, Denton, Texas

Jan 2024 - Dec 2025

Masters in Computer Science

Relevant Coursework – Software Engineering, Machine Learning, Database Management Systems, Big Data and Data Science, Artificial Intelligence

TECHNICAL SKILLS

Programming Languages - C, C++, Java, JavaScript, TypeScript, Python

Web Development: HTML5, Tailwind CSS, Angular, React.js, Django, Next.js, Node.js, Express.js

Cloud and Containerization: AWS(S3, EC2), GCP, Azure, Docker, Kubernetes

Database: PostgreSQL, SQLServer, MySQL, MongoDB

AI & LLM: OpenAI GPT, Claude, Gemini, CoPilot, Cursor

Version Control: Git, GitHub, GitHub Actions
