SUMMARY

Software Engineer with 3+ years of experience at Oracle and Intel, specializing in **full-stack development**, **cloud integration**, **DevOps automation**, and **data-driven application design**. At Oracle, delivered high-performing backend APIs and designed robust **CI/CD workflows** using **GitHub Actions**, **Docker**, and **Jenkins**, enhancing deployment stability by 45%. Leveraged **AWS services** (EC2, Lambda, S3) to maintain 99.98% system uptime and built responsive dashboards with **React.js** and **Redux** to reduce incident triage time by 25%. At Intel, engineered **Python-based microservices**, optimized **SQL** workflows processing 200K+ records daily, and developed internal dashboards that reduced reporting efforts by 50%. Skilled in **Agile methodology**, **cross-functional collaboration**, and committed to writing scalable, maintainable code that drives operational efficiency.

SKILLS

- **Languages:** Python, Java, C#, JavaScript, SQL, HTML5, CSS3, TypeScript
- **Frameworks & Libraries:** React, Redux, AngularJS, ASP.NET, Node.js, Express.js, jQuery, Bootstrap, TailwindCSS
- **Machine Learning & Data:** Pandas, NumPy, Matplotlib, TensorFlow (basics), Scikit-learn
- **Databases:** MySQL, PostgreSQL, MongoDB
- **Cloud Platforms:** AWS (EC2, Lambda, S3), Microsoft Azure
- **DevOps & CI/CD:** Docker, Git, GitHub Actions, Jenkins, Kubernetes (basic), Terraform (intro level)
- **Developer Tools & IDEs:** Visual Studio, VS Code, PyCharm, Postman
- **Software Development Practices:** REST APIs, OOP, Microservices, Agile/Scrum, TDD (Test-Driven Development)

EXPERIENCE

Oracle Corporation

May 2021 – Jul 2023

Software Engineer

- Architected and delivered scalable backend microservices using **Java** and **REST APIs** that processed over 5 million transactions/month, improving system performance by 35% and reducing latency in high-volume environments.
- Enhanced **PostgreSQL** query performance by 40% by implementing indexing strategies, partitioning large datasets, and optimizing data archival processes for faster enterprise reporting.
- Led **CI/CD pipeline automation** using **GitHub Actions**, **Docker**, and **Jenkins**, which reduced production deployment failures by 45% and improved delivery reliability.
- Collaborated with QA, Product, and DevOps in **Agile sprints** to deliver 30+ customer-facing features, contributing to an 18% improvement in user satisfaction through iterative development.
- Upgraded legacy infrastructure with **AWS (EC2, Lambda, S3)** services, enabling autoscaling and fault tolerance, and maintaining 99.98% uptime across critical applications.
- Developed real-time system health dashboards using **React.js** and **Redux**, which helped reduce incident triage time by 25% and improved visibility into production metrics.
- Adopted **TDD practices** using **JUnit** and **Mockito**, achieving 92% unit test coverage and reducing post-release bugs by 40%, thereby enhancing code quality and maintainability.
- Mentored 3 junior engineers via a structured onboarding program, accelerating team productivity and improving cross-team technical knowledge sharing

Intel Corporation

Mar 2020 – Apr 2021

Software Developer

- Designed and delivered automation tools using **Python** to replace repetitive reporting tasks, reducing manual workload by 65% and freeing up analysts for strategic data insights.
- Built internal dashboards to visualize KPIs and track operational SLAs, leading to a 50% drop in ad hoc reporting effort and faster decision-making by leadership.
- Developed scalable **ETL pipelines** with **Python** and **SQL** to ingest and clean over 200K daily records, improving anomaly detection accuracy and system monitoring.
- Implemented real-time alerting features using **Node.js** and **Express.js**, reducing incident detection times by 30% during peak operational hours.
- Refactored monolithic **Java** applications into modular **Python microservices**, increasing scalability by 50% and reducing server resource consumption by 20%.
- Standardized backend service documentation using **Confluence**, raising documentation completeness from 50% to 100% within three months and improving issue resolution turnaround.
- Collaborated with DevOps to containerize internal tools with **Docker**, cutting deployment time by 60% and ensuring consistency across dev/test/staging environments.

EDUCATION

- **Master of Science – Computer Science**
Saint Louis University, Saint Louis, Missouri, United States
- **Bachelor of Technology – Information Technology**
Sreenidhi Institute of Science and Technology, Hyderabad, Telangana, India

may 2025

June 2022
