New Jersey, USA | Phone: +1 (201)-736-4797 | Email | LinkedIn

SUMMARY

Results-driven Data Analyst with 3+ years of experience leveraging modern data tools and statistical methods to drive insights across nonprofit, marketing, and retail domains. Adept at building interactive dashboards in Power BI, Looker, and Tableau; automating ETL pipelines with Apache Airflow and dbt; and crafting scalable data models in Snowflake and SQL. Proficient in Python, R, and PySpark for advanced analytics, including predictive modeling, churn analysis, A/B testing, sentiment analysis, and time series forecasting. Known for translating complex data into compelling visual stories that influence decision-making, reduce inefficiencies, and enhance user engagement. Demonstrated success in improving data quality, campaign ROI, operational forecasting, and stakeholder collaboration through end-to-end analytics solutions.

TECHNICAL SKILLS

Programming Languages	Python, SQL, R
Data Manipulation Libraries	Pandas, NumPy, PySpark
Visualization & BI Tools	Power BI, Looker, Tableau, Seaborn, Excel (Pivot Tables, Simulators)
Data Engineering Tools	Apache Airflow, dbt, Snowflake
Machine Learning Libraries	Scikit-learn, PyOD, spaCy, TextBlob
Statistical & Analytical Methods	Anomaly Detection, Predictive Modeling, Sentiment Analysis, Time Series Forecasting, Cohort Analysis, Z-score Profiling, A/B & Multi-Factor Experiments, Marginal Analysis
Data Governance & Quality	Data Cleaning, Data Standardization, Anomaly Checks, Rule-Based Validations
Business & Domain Expertise	Marketing Analytics, Sales Performance Tracking, Churn & Retention Analysis, Pricing Strategy, Supply Chain Optimization
Data Warehousing	Snowflake
Collaboration & Communication	Data Storytelling, Stakeholder Collaboration, Data-Driven Strategy Enablement

EXPERIENCE

Bright Mind Enrichment, NJ Data Analyst	(July 2025– Present)
- Engineered interactive Power BI dashboards and Looker Studio reports to visualize engagement metrics of SIP-at-Home participants, enabling stakeholders to make data-informed decisions that boosted user retention by 28%. - Extracted and cleaned large datasets using Python (Pandas, NumPy) and SQL from user interaction logs, enhancing the accuracy of behavior modeling and identifying critical drop-off points in the virtual enrichment curriculum. - Implemented predictive analytics models using Scikit-learn to forecast student activity trends and personalize SIP module recommendations, increasing average participation time by 15%. - Optimized ETL pipelines using Apache Airflow and dbt to automate data ingestion from registration forms, YouTube analytics, and email campaigns, reducing manual effort by 40% and improving data freshness. - Devised anomaly detection algorithms using PyOD and statistical techniques to flag inconsistent user engagement data, aiding in early identification of platform issues and improving data quality assurance. - Visualized demographic insights using Tableau and Seaborn to support grant proposal narratives, enabling the nonprofit to secure additional funding by demonstrating program reach across underserved communities. - Correlated sentiment analysis results from student feedback using NLP libraries like spaCy and TextBlob to identify content strengths and gaps, leading to a 20% improvement in curriculum satisfaction ratings. - Collaborated with program designers and web developers to align data insights with content development, integrating real-time analytics into the SIP-at-Home platform and enhancing responsiveness to learner needs. - Standardized data cleaning and manipulation workflows using Python (Pandas) and SQL to harmonize multi-source program data while enforcing data governance protocols, resulting in a 95% reduction in reporting inconsistencies and improved compliance with nonprofit data stewardship standards.	
Cisco, TX (Remote) Data Analyst	(Jan 2024 – Aug 2024)
- Streamlined marketing spend data ingestion from multiple ad platforms into Snowflake, standardizing reporting layers via dbt, which slashed weekly prep time by 55% and freed teams to focus on strategy refinement. - Engineered cost allocation models within Looker that broke down AWS expenses by service, department, and usage trends, enabling granular accountability reviews that cut redundant workloads, delivering a 28% savings in monthly bills. - Advanced UI experiments beyond standard A/B by incorporating multi-factor uplift analysis in Python, exposing nuanced behavioral shifts across user segments that increased new feature engagement by 24%. - Centralized campaign-level ROI tracking by curating PySpark-processed data marts, equipping marketing with near real-time dashboards that trimmed turnaround on strategic pivots from weeks to days. - Investigated invoice anomalies through time-based clustering and z-score profiling, flagging billing inconsistencies early enough to negotiate contract adjustments and avoid 15% in excess payments. - Drilled into customer drop-off journeys by building churn indicator matrices in SQL, spotlighting patterns that fueled hyper-targeted remarketing pushes, driving a 21% bump in reactivations.	

- Automated layered data confidence checks in Airflow, embedding logic that filtered inconsistencies before dashboard refresh cycles, reducing last-minute fire drills and stabilizing report accuracy by 34%.
- Collaborated with business partners to decode audience microsegments, translating raw cohort outputs into storytelling visuals that helped sales secure buy-in for tailored go-to-market campaigns, boosting upsell traction.

Hexaware, India

(June 2021 – Dec 2022)

Data Analyst

- Consolidated fragmented POS, distributor, and returns data across three ERP platforms using SQL and Python data preparation routines, uncovering overlooked fulfillment bottlenecks that drove corrective stocking strategies and cut backorder instances by 32%.
- Revamped sales performance reporting by constructing Power BI dashboards with drill-through profitability maps, giving regional heads real-time SKU margin visibility, which accelerated decision-making for underperforming product lines by 20 days on average.
- Profiled supplier reliability trends through advanced aggregations in Snowflake, delivering scorecards that flagged inconsistent lead times, leading to renegotiated contracts and a 12% improvement in on-time deliveries.
- Formulated month-over-month churn snapshots and cohort stickiness analyses using dense SQL window functions, pinpointing loyalty breakpoints that fed targeted retention email triggers, resulting in a 19% rebound in repeat orders.
- Benchmarked price sensitivity scenarios via factorial A/B designs and marginal analysis in R, clarifying optimal discount ranges that avoided margin erosion, achieving 17% higher profitability during promotional events.
- Integrated historical seasonality with short-term drivers in time series forecasting models, balancing reorder thresholds that minimized aging stock by 23%, thereby freeing up cash flow for aggressive Q4 initiatives.
- Developed Excel-based scenario simulators linked to dynamic data pulls, allowing finance to instantly project earnings impact from currency shifts and tax revisions, directly informing budget pivots worth 15% of quarterly spend.
- Established multi-layered anomaly checks on replenishment data pipelines, combining SQL pattern validations with Python rule triggers, significantly reducing surprise variances in compliance reports and cutting manual investigation time by 68%.

EDUCATION

Masters of Science in Computer and Information Science	Dec 2024
Pace University - New York, NY	
Bachelor of Engineering - Computer Engineering	May 2022
Gujarati Technological University - Gujarat, India	

PROJECTS

- Virtual Engagement Optimization for EdTech Platform
- Automated multi-source data pipelines using Airflow and dbt, improving data freshness and cutting manual prep time by 40%.
 - Built Scikit-learn models to predict drop-off risk, enabling early interventions that boosted course completion by 22%.
 - Created Looker dashboards and cohort heatmaps for real-time content performance tracking and strategic updates.
 - Applied sentiment analysis with spaCy/TextBlob to survey data, increasing satisfaction scores by 18% through curriculum tuning.
- Retail Price Sensitivity & Profitability Simulator
- Designed factorial A/B testing models in R to find optimal discount levels, increasing promo-period margins by 14%.
 - Built dynamic Excel simulators connected to Snowflake, helping finance forecast earnings under different price points.
 - Integrated time series forecasting to fine-tune inventory levels for seasonal promotions, reducing overstock by 23%.
 - Developed Power BI dashboards with “what-if” pricing scenarios and SKU-level margin drilldowns, streamlining pricing reviews.
