

LinkedIn: <https://www.linkedin.com/in/kshitizb/>

Professional Summary

- 5+ years of experience in Java development (v8, v11, v17), with expertise in advanced Java features (Multithreading, Concurrency, Java I/O, Serialization, Reflection, Lambda, Streams API), and leveraging cloud services through AWS (EC2, Lambda, S3, RDS) for building and deploying scalable applications.
- 5+ years of experience in building and maintaining scalable backend services using Node.js, Express, and MongoDB, optimizing performance and ensuring seamless API integrations.
- Proven ability to collaborate effectively in cross-functional teams and take leadership roles in guiding projects to successful completion.
- Expertise in backend development using microservices architecture and RESTful APIs, with proficiency in Spring Framework (Spring Core, Spring Boot, Spring Security, Spring MVC, Spring Cloud).
- Hands-on experience in cloud-based AWS services (EC2, S3, Lambda, RDS, DynamoDB, etc.).
- Certified in Machine Learning, with knowledge of various Artificial Intelligence algorithms and their applications in real-world projects.
- Able to leverage machine learning techniques to optimize processes, analyze large datasets, and build intelligent systems.
- Strong command of front-end technologies React.js (v17/v18), Angular (v14/v12/v10), and Vue.js (v3/v2) to build modern, responsive web applications with a focus on performance.
- Strong expertise in cloud technologies, particularly AWS and Azure.
- Adept in containerization and orchestration using Docker and Kubernetes, ensuring efficient, reliable deployment of applications in dynamic environments. Applied Infrastructure as Code (IaC) principles using Terraform, AWS CloudFormation, and Ansible to streamline infrastructure provisioning.
- Proficient in problem-solving methodologies, applying Agile development practices and continuous improvement cycles to identify and address development challenges.
- Proven success in managing and resolving complex issues, whether through technical innovation, collaborative team efforts, or optimizing workflows.
- Strong experience with database management using relational and NoSQL databases (Oracle, MySQL, PostgreSQL, MongoDB, Cassandra, Redis), with a focus on ensuring high availability, performance, and data integrity. Used Hibernate and JPA for ORM and database optimization.
- Integrated security best practices, including OAuth2, JWT, LDAP, SSO, and CAS. Applied OWASP security best practices to prevent vulnerabilities such as XSS, CSRF, and SQL Injection, ensuring compliance with security standards and regulations (e.g., GDPR, SOC 2, etc.).
- Experienced in implementing CI/CD pipelines with tools such as Jenkins, GitLab CI, CircleCI, and Travis CI, optimizing development workflows and ensuring rapid, secure software delivery. Integrated automated testing frameworks (JUnit 5, TestNG, Mockito, Cypress, Selenium).
- Proficient in version control systems (Git, GitHub, GitLab) and employing best practices for code collaboration, branching strategies, and code reviews to foster a productive team environment.
- Hands-on experience in logging and monitoring using ELK Stack (Elasticsearch, Logstash, Kibana) and Log4j2, providing actionable insights into system performance in distributed systems.

Education

Lewis University, Romeoville, IL
Master of Science in Computer Science

08/2022 – 05/2024
GPA: 4/4

Islington College (Affiliated to London Metropolitan University, UK)

10/2017 – 03/2021

Kathmandu, Nepal

Bachelor of Science in Computing

CGPA: 7.79/10

Certifications

Advanced Learning Algorithms

DeepLearning.AI, Stanford University

Issued: Jan 2024

Credential ID: UZBPYPYWT5ET

Supervised Machine Learning: Regression and Classification

DeepLearning.AI, Stanford University

Issued: Sep 2023

Credential ID: 5P9C8J5G7PSC

Technical Skills

- **Languages & Frameworks:** Java, SQL, Python, JavaScript, TypeScript, Spring (Core, Boot, MVC), Hibernate, Angular, React, Vue, Node.js, Express, RabbitMQ, Kafka, Node.JS
- **Cloud & DevOps:** AWS (EC2, S3, Lambda, RDS, DynamoDB, VPC, IAM, CloudWatch, CloudFront, Elastic Beanstalk, SNS, SQS, Route 53), Azure (App Service, Functions, AKS, Azure SQL Database, Cosmos DB, Virtual Machines, Blob Storage, Virtual Networks, Key Vault, Azure DevOps, Azure Monitor, Resource Manager.), Docker, Kubernetes, Jenkins, GitLab CI, GitHub CI, Terraform, CloudFormation.
- **Databases:** MySQL, PostgreSQL, MongoDB, Cassandra, Redis, Firebase
- **Testing & Security:** JUnit, Selenium, Postman, REST-assured, OAuth2, JWT, OWASP, XSS, CSRF, SQL Injection prevention
- **Version Control & Build Tools:** Git, GitHub, Maven, Gradle, Bamboo, Jenkins, NPM, Yarn
- **Project Management & IDEs:** Jira, Agile (Scrum/Kanban), IntelliJ IDEA, Eclipse, VSCode

Professional Experience

Client: Delta Airlines Atlanta GA

01/2024 - Present

Role: Full Stack Java Developer

- Developed and deployed microservices using Spring Boot and Spring Cloud to support high-availability applications critical to Delta's aviation operations, ensuring seamless customer experiences during flight booking, check-in, and tracking processes.
- Built RESTful APIs to connect backend systems with Delta's aviation services, optimizing real-time data transfer for flight statuses, baggage handling, and reservation systems. Reduced API response times by 30%, enhancing system performance.
- Leveraged Java 17 features (Streams, Lambda Expressions) for processing large volumes of flight-related data, increasing backend processing speed and efficiency in mission-critical applications.
- Architected and developed UI using React.js and Angular to create a dynamic and user-friendly experience for both customers and internal Delta employees, optimizing user interfaces for booking systems, ticketing, and flight status updates.
- Integrated AWS services (EC2, S3, RDS) and Docker to manage the cloud infrastructure for high availability and scalable solutions in Delta's global aviation network.
- Strengthened the security of Delta's sensitive customer data through OAuth2, JWT, and SSL/TLS encryption, ensuring compliance with aviation industry standards.
- Led CI/CD implementations with Jenkins, improving deployment efficiency and reducing release times in a highly regulated environment.
- Ensured high-quality code through comprehensive unit and integration tests with JUnit, Mockito, and Selenium, achieving 95%+ test coverage for key services in Delta's production systems.
- Worked in an Agile (Scrum) environment to meet the evolving demands of Delta's global aviation operations, ensuring timely delivery of features and bug fixes.
- Environment: Java 17, Spring Boot, Spring Cloud, Microservices, React.js, Angular 14, AWS (EC2, S3,

RDS), Docker, Jenkins, Terraform, CI/CD, OAuth2, JWT, JUnit, Mockito, Selenium, Git, GitLab, MySQL, MongoDB, Kubernetes, Log4j, ELK Stack, RabbitMQ, Kafka

Client: Comcast, Offshore

07/2020 - 07/2022

Role: Full Stack Java Developer

(Relocated to United States for Graduate studies from August 2022)

- Led the design and implementation of cloud-native communication platforms leveraging Spring Boot and microservices, delivering scalable, high-performance solutions for Comcast's communication services including video streaming, customer service platforms, and subscription management systems.
- Developed RESTful APIs to enable seamless communication between backend systems and user-facing interfaces, improving the customer experience with low-latency and highly reliable services, such as real-time streaming and interactive customer support.
- Architected and built interactive user interfaces with React.js and Angular, enabling intuitive and responsive designs for Comcast's user-facing communication apps, including dashboards for account management and streaming services. Node.JS
- Utilized AWS services (Lambda, S3, EC2) and Azure services (according to the project) to design, deploy, and manage highly available infrastructure supporting Comcast's massive user base, ensuring reliability and auto-scaling during peak demand periods.
- Applied performance optimization techniques, including code refactoring, database indexing, and cloud resource scaling on Azure, improving application speed and reducing operational costs.
- Implemented Docker to containerize microservices, enabling consistent deployments across various environments and improving error reduction by 40%.
- Spearheaded the development of CI/CD pipelines using Jenkins, resulting in a 50% reduction in deployment times and streamlining updates to critical customer-facing platforms in the fast-paced communications industry.
- Applied JMS (Java Messaging Service) for scalable messaging, enabling seamless communication between Comcast's services and supporting real-time features for subscribers.
- Enhanced the security and privacy of Comcast's communication channels by integrating JWT and OAuth2 for secure authentication and role-based access control.
- Collaborated with cross-functional teams to develop features focused on data analysis and reporting, giving valuable insights into user engagement and service performance.
- Delivered high-quality, secure code with JUnit, Mockito, Cypress, and Selenium, ensuring Comcast's communication services met stringent reliability standards.
- Environment: Java 11, Spring Boot, Microservices, React.js, Angular 12, AWS (EC2, Lambda, S3), Docker, Jenkins, JMS, JWT, OAuth2, JUnit, Mockito, Selenium, Git, Maven, MongoDB, PostgreSQL, CloudWatch, Terraform, TDD, RabbitMQ, Kafka, Azure Web Services

Client: Eplanet Private Limited, Kathmandu, Nepal

02/2020 - 07/2020

Role: Full Stack Java Developer

- Spearheaded the development of a cloud-based platform tailored for the management and execution of beauty pageant competitions, utilizing Spring Boot to build scalable, event-driven microservices that handled high volumes of real-time audience interaction, contestant tracking, and voting during live events.
- Designed and developed custom RESTful APIs to integrate the voting system, contestant profiles, and live event updates, ensuring smooth data flow between multiple systems, resulting in reduced latency and enhanced user engagement during live streams and voting sessions.
- Created an interactive contestant management interface using React.js and Angular, enabling

contestants and judges to easily access and update profiles, scores, and other real-time data during events, which boosted participant satisfaction and operational efficiency.

- Implemented an efficient live event dashboard that allowed judges, organizers, and audience members to monitor performance scores, audience voting trends, and contestant rankings in real-time, improving transparency and interaction throughout the competition.
- Orchestrated cloud infrastructure using AWS services (Lambda, EC2, S3), supporting global live streaming for events, ensuring the platform could scale automatically to accommodate surges in user activity during peak voting times.
- Led the adoption of Docker for containerization, simplifying deployment across staging and production environments, and reducing deployment errors during critical event periods.
- Developed a real-time messaging system using JMS to enable instant communication between the backend and frontend, ensuring real-time updates for voting results and contestant performances, keeping audiences engaged during live events.
- Designed secure user authentication protocols using OAuth2 and JWT, protecting sensitive contestant data and ensuring secure access for pageant staff, judges, and voters.
- Collaborated with event managers to create analytics tools for tracking audience participation, voting patterns, and overall engagement during live events, providing actionable insights.
- Successfully integrated and deployed Java applications in Microsoft Azure, utilizing services like Azure App Service, Azure SQL Database, and Azure Functions to optimize cloud performance and scalability.
- Utilized CI/CD pipelines with Jenkins to automate the release process during live broadcasts.
- Wrote detailed unit and integration tests with JUnit and Mockito.

Company: Insight Technology Pvt Ltd. Lalitpur, Nepal

09/2018 - 01/2020

Role: Java Developer

- Played a key role in the design and development of a scalable learning management system (LMS), to ensure alignment with the company's education technology goals.
- Implemented the Spring Web MVC Framework to build the LMS platform, efficiently applying MVC design patterns for clear separation of concerns between the presentation layer and business logic, ensuring maintainable and scalable solutions for managing courses, students, and learning content.
- Utilized Spring MVC and Dependency Injection (DI) to create robust, scalable web applications for handling high volumes of student data, course materials, and assessments, supporting the system's growth as the user base expanded.
- Developed a Data Access Object (DAO) layer using Hibernate 3.0 to optimize the persistence and interaction with the database, ensuring efficient student data management, course progress tracking, and grades retrieval.
- Created Message-Driven Beans (MDB) to support asynchronous communication, enabling efficient notification systems for students and instructors, and ensuring real-time updates on assignments, grades, and course announcements.
- Automated dynamic report generation for student progress, course completion rates, and transaction handling using JavaBeans.
- Leveraged Java Multithreading to handle concurrent batch processing of student submissions and grades, ensuring smooth and timely processing of assignments, quizzes, and exams.
- Designed efficient SQL queries, stored procedures, and functions for managing and retrieving student, course, and assessment data.
- Perform Cross-browser testing to ensure compatibility of the web application across different devices.
