Data Engineer

Data Engineer with 4+ years of experience designing SQL pipelines, automating ETL workflows, and developing cloud-ready data solutions using Azure Data Factory, SSIS, SQL Server, and Python. Strong in data modeling, performance tuning, orchestration, and large-scale data ingestion across financial systems.

WORK EXPERIENCE

Oliver Info Tech LLC

04/2025 - Present

Data Engineer

- Designed & automated ETL workflows in ADF processing 8-15M records/day across structured & semi-structured sources.
- Built SSIS packages with exception handling, logging, audit tables & parameterization, enabling scalable multi-env deployment.
- Improved stored procedure & query performance by 30-50% via indexing, join optimization & partition strategies.
- Engineered ADF Data Flows for transformations (derived columns, lookups, mapping flows), reducing pipeline runtime by 40%.
- Integrated data from APIs, Excel, CSV & third-party systems into Azure SQL & Data Lake, ensuring schema consistency.
- Built reusable Power BI semantic models enabling self-service analytics & reducing dependency on engineering by ~60%.

Arthur J. Gallagher & Co.

08/2019 - 06/2023

Power BI & SQL Developer

- Developed SSIS ETL pipelines integrating Oracle, SQL Server, Hadoop & CSV files, automating 80% of manual data refresh.
- Built SQL-based analytical models supporting underwriting & finance analytics with 6+ integrated data sources.
- Built 8+ Power BI dashboards using optimized DAX measures, improving reporting efficiency and decision visibility for 100+ stakeholders.
- Created SSRS reports with drill-down & parameter-driven navigation, reducing analysis turnaround time from days to hours.
- Tuned SQL queries & indexing strategies, improving pipeline performance & report execution speed by 30-50%.
- Collaborated with finance, underwriting and analytics teams to translate reporting requirements into SQL-based data models and Power BI insights used for decision support.
- Implemented data validation checks and reconciliation logic across ETL workflows, reducing data quality issues and report inaccuracies by ~30%.
- Implemented monitoring and job-alerting for ETL workloads, improving pipeline reliability and reducing refresh failures by ~25%.
- Automated recurring financial reporting workflows, reducing manual Excel work by 10-15 hours/week.
- Automated preprocessing pipeline for feature generation, missing value handling & normalization.

EDUCATION

Master of Science in Advanced Data Analytics — University of North Texas

(May 2025)

PROJECTS

Dallas Airbnb ML & Data Engineering

- Built ML models: Logistic Regression (84%), Random Forest (88%) for price/host predictions.
- Processed 200K+ Airbnb listings using Python (Pandas, NumPy) for large-scale modeling.
- Performed feature engineering, dataset automation & regression modeling ($R^2 = 0.57$)

TECHNICAL SKILLS:

SQL • Python • Azure Data Factory (Pipelines, Data Flows, Triggers) • SSIS • ETL Pipelines Azure SQL • Azure Data Lake • Snowflake • Power BI • Performance Tuning • Git • APIs Data Modeling (Star/Snowflake)
• Regression • Random Forest • Tableau • ADF Monitoring.
