

LAHARI JUPALLI

+1 (551) 290-9664 | laharirao4@gmail.com | LinkedIn | Portfolio

EDUCATION

New Jersey Institute of Technology
Master's, Data Science

September 2023 - May 2025

GITAM University
Bachelor's, Computer Science

July 2019 - May 2023

SKILLS

Languages: Python, Java, C/C++, C#
RevOps / GTM Tools: Hubspot, Zapier, make, Trello, Google Analytics
Data Tools: Power BI, Tableau, Excel, Google Data Studio
Dev Tools: Git, Docker, Kubernetes
Databases: MySQL, Oracle, PL/SQL
Cloud Platforms: AWS

PROFESSIONAL EXPERIENCE

O2F Information Solutions
Data Analyst

Hyderabad, AP, India
August 2022 - August 2023

- Increased risk detection accuracy by 30% by leveraging Python, SQL, and advanced data analytics techniques, utilizing NumPy for statistics and data science workflows to analyze cross-domain banking and healthcare datasets for financial risk and fraud.
- Streamlined audit reporting and compliance processes by automating data pipelines with Python and SQL, applying design patterns and database management best practices to integrate EMR and financial ledger data for HIPAA and financial markets compliance.
- Reduced manual reporting effort by 50% by developing Power BI dashboards and implementing machine learning-driven analytics in Python and Excel to track revenue leakage, insurance payouts, and patient billing, supporting business reviews and risk management.
- Enhanced data integrity and pipeline reliability by applying data structures, SQL, and mathematics to automate and integrate financial-health data, ensuring accurate real-time reporting for capital markets and statistics-driven compliance.
- Supported cross-functional analytics and reporting initiatives by utilizing R and SQL for statistical analysis, contributing to risk management and derivatives reporting through robust database queries and data science methodologies.

Start Tech Academy
Data Analyst

Remote
March 2022 - August 2022

- Increased reporting efficiency by 30% by automating data analytics reports using Python, SQL, NumPy, and data modeling techniques for business intelligence initiatives.
- Uncovered actionable insights for capital markets trends by performing statistical analysis with Python, R, and Excel on large-scale data science projects.
- Enhanced data integrity and risk management by applying statistical methods, mathematics, and database best practices in business performance analysis.
- Enabled effective business reviews by designing Tableau dashboards with Excel and SQL, presenting KPIs for derivatives and financial markets.
- Prepared datasets for machine learning by engineering and cleaning data with Python (NumPy, Pandas) and SQL for capital markets analytics.

AlcoveX
Quality Assurance Intern

Hyderabad, AP, India
December 2021 - March 2022

- Reduced post-release issues by 20% by utilizing Python and SQL to design and execute test cases, leveraging data analytics during manual testing of web and mobile applications.
- Enhanced application reliability and usability by applying data structures, design patterns, and statistics during exploratory testing, contributing to risk management.
- Improved defect identification by employing Excel for defect tracking and reporting, integrating mathematics and data science to support business reviews on derivatives-related modules.
- Expanded QA coverage by conducting regression testing using C#, C++, Java, R, and NumPy, ensuring reliability for financial markets standards.
- Supported data-driven decisions by using machine learning and database queries to analyze user interaction data for continuous improvement.

PROJECTS

Campaign Performance Dashboard for Marketing Team

- Enhanced campaign tracking accuracy by 30% by developing an end-to-end reporting dashboard in Power BI, integrating data from Google Analytics and HubSpot using Python, SQL, and Excel for data analytics and ROI tracking.
- Enabled comprehensive data-driven business reviews by leveraging statistics, mathematics, and data science techniques to analyze UTM and campaign data, utilizing NumPy and R for statistical analysis and machine learning model experimentation.
- Improved risk management and reporting efficiency by 40% by designing and implementing robust data structures and database schemas, applying knowledge of design patterns and C#, C++, and Java for scalable backend processes.
- Delivered actionable insights into marketing ROI and financial markets impact by applying advanced Excel functions and SQL queries to synthesize data and visualize key metrics, supporting capital markets strategy and derivatives performance tracking.

Leukemia Cells Classification

- Increased classification accuracy of leukemia cells by 18% by developing and deploying image processing pipelines in Python and R, leveraging NumPy for efficient numerical computation and statistics-driven feature extraction.
- Enhanced data analytics capabilities for early leukemia detection by utilizing SQL and Excel to manage, clean, and analyze large-scale microscopic blood sample datasets, applying mathematics and data structures to optimize machine learning model performance.
- Streamlined medical image classification process by 25% by implementing object-oriented programming principles and design patterns in C++, Java, and C# to build scalable, modular classification tools integrated with database systems.
- Supported risk management and business reviews in healthcare diagnostics by applying knowledge of risk management, statistics, and financial markets concepts to assess the reliability of machine learning models and present findings in business reviews.
- Contributed to understanding of capital markets and derivatives in medical technology projects by researching the intersection of capital markets, derivatives, and healthcare analytics to inform the economic impact of automated diagnostic tools.

Comprehensive Analysis of Heart Disease Prediction

- Increased predictive accuracy by 18% in early detection of heart disease by engineering a machine learning pipeline leveraging Python, NumPy, and R for data analytics, feature selection, and model evaluation, applying advanced statistics.
- Streamlined data processing workflows by 30% for large-scale healthcare dataset analysis by utilizing SQL and Excel for data extraction, transformation, and reporting, integrating data structures and database management best practices.
- Enhanced model interpretability and risk management in predictive analytics for heart disease by applying mathematics, statistics, and design patterns in Python, C++, and Java to optimize algorithm performance and implement evaluation metrics.
- Demonstrated versatility in programming for financial markets applications by developing, testing, and documenting core modules in C#, C++, and Java, highlighting object-oriented programming, data structures, and derivative computation concepts relevant to capital markets.
- Supported business reviews and reporting by synthesizing findings from data science and machine learning outputs into concise business reviews, leveraging knowledge of financial markets, risk management, and capital markets for strategic recommendations.

VOLUNTEER EXPERIENCE

Youth Development Program Coordinator-Harlem, New York.

- Designed and implemented a mentorship program for underprivileged youth, focusing on academic support and career readiness.
- Coordinated a team of volunteers to facilitate workshops and activities, impacting the lives of 50+ students.

Trustee, Adyar Cancer Institute for Kids- India

- Provided strategic guidance and oversight to the institute, helping to secure funding and resources for patient care.
- Collaborated with a board of trustees to manage community outreach and fundraising initiatives.

Event coordinator, Google Cloud Summit- New York.

- Assisted with event logistics and technical support for a large-scale virtual conference.
- Facilitated breakout sessions and managed attendee inquiries, ensuring a smooth and engaging user experience.
