

LAKSHAY SANTOSH KUCHERIYA | Software Engineer

Location: UT | Email: lakshaykucheriya2@gmail.com | Phone: (385) 456-7864 | [LinkedIn](#) | [GitHub](#)

SUMMARY

- Accomplished Software Engineer with nearly 3 years of experience across diverse industries and strong proficiency in Java, C++, Python, JavaScript and Data Structures and Algorithms.
- Skilled in working with frameworks and libraries such as React.js, Node.js, and Django to develop interactive and user-friendly software solutions and web applications.
- Experienced in database management with MySQL, MongoDB, and PostgreSQL, ensuring efficient data storage and retrieval to optimize application performance.
- Proficient in Java programming, leveraging frameworks like Spring MVC and Spring Boot to create scalable and efficient backend systems.
- Well-versed in Agile software development and Test-Driven Development (TDD), ensuring the delivery of high-quality and robust code with adherence to project timelines.
- Familiar with version control system tools like Git and project management platforms like JIRA, facilitating transparent workflow management and collaboration.
- Experienced in implementing CI/CD pipelines using tools like Jenkins, and proficient in deploying applications on Amazon Web Services (AWS), ensuring efficient software delivery, and seamless integration with cloud services.

SKILLS

Programming Languages	Java, C++, Python, HTML/CSS, JavaScript, Kotlin, C Sharp(C#), SQL, MATLAB
Frameworks/Libraries	ExpressJS, React, Node.js, ASP.NET, JFS, JSP, JDBC, Spring MVC, Spring Boot, Django, D3.js, REST API
Databases	MySQL, Microsoft SQL Server, Firebase, MongoDB, PostgreSQL
Tools	JIRA, Trello, Figma, Android Studio, Postman, Qt Creator, Docker, Jenkins, AWS, Azure, Heroku, Visual Studio Code, Prisma ORM
Methodologies	Agile, SDLC, Waterfall, TDD
Version Control	Git, SVN
Testing	Unit Testing, Integration Testing, Selenium, Jest, JUnit

EXPERIENCE

Elevance Health | IN Software Engineer

Aug 2023 – Present

- Developed backend systems using Java and frameworks like Spring and Hibernate, implementing SOLID principles and design patterns like Dependency Injection, resulting in a 25% improvement in code maintainability.
- Designed and implemented RESTful APIs with proper error handling, authentication, and payload optimization, improving data exchange between React frontend and backend, reducing data entry errors by 35%.
- Collaborated with cross-functional teams to integrate MongoDB by implementing sharding and indexing strategies, improving data retrieval efficiency by 50% and ensuring rapid access to critical telematics data for analytics.
- Set up CI/CD pipelines using Jenkins and Git, automating build, test, and deployment processes, reducing deployment time by 30%, enabling quicker iteration cycles and faster response to user feedback.
- Participated in Agile project management by leading sprint planning, daily stand-ups, and retrospectives, and participating in code reviews, improving project delivery timelines by 20%.
- Conducted performance tuning and optimization of Java applications using Redis caching and Hibernate query optimizations, improving application response time by 40% and enhancing overall system performance.
- Automated application deployment and system monitoring using shell scripts in Unix/Linux environments, improving system reliability and reducing downtime by 15%.

CitiusTech | India Software Engineer

Jun 2021 – Jul 2022

- Spearheaded the development of scalable backend services using Java and Spring Boot, implementing load balancing and connection pooling for MySQL databases to efficiently manage large-scale healthcare data.
- Developed RESTful APIs with efficient request handling and data serialization techniques, enhancing data exchange between frontend and backend distributed systems and boosting processing efficiency.
- Developed user-friendly interfaces using React.js and Node.js, optimizing component rendering and minimizing API call latency, leading to faster load times and an improved user experience.
- Automated CI/CD pipelines using Azure DevOps and AWS CodePipeline, optimizing build and deployment workflows, which reduced manual intervention and accelerated deployments by 25%.
- Delivered comprehensive technical support and hands-on training for end users, troubleshooting complex issues and conducting workshops, reducing support tickets by 25% and boosting user satisfaction by 20%.
- Actively participated in Agile development, code review and scrum meetings, ensuring continuous integration of feedback and tracking project progress to meet deadlines.
- Managed version control using Git for branching and merging strategies, and tracked project tasks with JIRA, ensuring transparent workflows and timely completion of development milestones.
- Led the adoption of Docker for containerizing Java-based backend services, ensuring seamless deployment, easy scaling, and consistent environments to meet the growing demands of healthcare applications.

- Led the development of backend systems using Java Spring Boot, employing microservices architecture and design patterns such as MVC and Dependency Injection to ensure scalable and robust web application.
- Worked closely with frontend teams to integrate Java-based RESTful APIs with React.js, optimizing data flow and using HTTP caching to enhance communication efficiency between the frontend and backend.
- Utilized MySQL and MongoDB for data storage, optimizing SQL queries and implementing indexing in MongoDB to improve query performance and ensure faster data retrieval and processing.
- Applied software design patterns like MVC and Dependency Injection, centralizing application logic and improving both scalability and code maintainability, reducing development time for new features by 20%.
- Developed secure healthcare applications using Java Spring Boot, implementing encryption, role-based access control, and adhering to HIPAA standards, reducing data breaches by 30%.
- Performed rigorous unit and integration testing using JUnit and Postman to validate backend functionalities, ensuring software reliability and reducing post-deployment issues by 15%.
- Developed CI/CD pipelines using Jenkins and GitLab CI, automating build and deployment processes with integrated testing, which reduced manual intervention and improved deployment efficiency by 30%.
- Participated actively in Agile methodologies, facilitating sprint planning, conducting daily stand-ups, and driving retrospectives, which improved overall sprint efficiency and software delivery timelines.

EDUCATION

Master of Software Development

Dec 2023

University of Utah, UT

Bachelor of Technology in Electronics and Communication Engineering

July 2022

Amrita Vishwa Vidyapeetham, India

PROJECTS

Data Labeling Platform

- Developed a Web3 SaaS platform using Next.js, TypeScript, and React.js to handle a high volume of network traffic, facilitating data labeling with Solana blockchain for secure micropayments.
- Implemented secure file storage with S3, CloudFront, and pre-signed URLs, ensuring reliable data management.
- Integrated Solana wallet for payments and PostgreSQL with Prisma ORM for user transactions and data handling.
- Conducted thorough API testing with Postman, ensuring the functionality of the Web2 and Web3 components.

Android DrawWiz App

- Lead the development of an Android drawing app using MVVM, Jetpack Compose, Kotlin, and Android Studio.
- Implemented efficient data storage and retrieval with Room and DAO for drawing data persistence.
- Elevated user experience by integrating automated testing and seamless sharing features for cross-app sharing.

MSD Script

- Designed and built a C++ arithmetic scripting language interpreter adhering to computer science fundamentals.
- Demonstrated adherence to CI/CD principles, achieving 96% code coverage through rigorous testing methodologies.
- Executed comprehensive testing (unit, integration, functional, regression) ensuring the interpreter's robustness and reliability.

Learning Management System

- Devised and launched a Canvas-like LMS, integrating features for class management and user tracking, and deployed it using Docker for easy scalability, reducing server response times by 40%.
- Developed a UI within the MVC architectural pattern and Object-Oriented Programming to present course information to users and applied C# LINQ queries to extract data from a remote database.
